Evolutionary Humanism:

Evolutionary Humanism Julian Huxley, 1954 **Julian Huxley, Evolutionism and the History of Transhumanism** Ingrid Dunér, 2025-03-18 The evolutionary biologist Julian Huxley 1887 1975 attempted to promote a religion for the future which he would come to refer to as Transhumanism Transhumanism was an attempt to unite a more traditional humanistic view of the human as containing some form of core essence or potential with an evolutionary point of view of humans as a work in progress Before humans natural selection had been responsible for the transformation of life Through its ordering principles and through chance it had given rise to humankind which had ushered in a new phase of evolution Humanity stood on the threshold of yet another critical point in evolution The consciously purposive phase of evolution This open access book explores the history of transhumanism by analyzing how Julian Huxley's transhumanism develops and why it does at this particular point in time by placing it firmly within the context of his specific scientific and sociopolitical milieu starting roughly in the interwar years and stretching over the Second World War to the 1970s Continuing the study then focuses on the new transhumanists of the 1970s 1980s and 1990s and investigates continuity in mode of thinking contributing to a more coherent understanding of transhumanism its history and of modern projects of human enhancement The book captures how scientific and technological development in relation to society and social order shapes images and expectations of the future and of what future is desirable **Evolutionary Humanism** Julian Huxley, 1952 **Virtual Immortality - God, Evolution, and the Singularity in Post- and Transhumanism** Oliver Krüger, 2021-10-01 In recent years ideas of post and transhumanism have been popularized by novels TV series and Hollywood movies According to this radical perspective humankind and all biological life have become obsolete Traditional forms of life are inefficient at processing information and inept at crossing the high frontier outer space While humankind can expect to be replaced by their own artificial progeny posthumanists assume that they will become an immortal part of a transcendent superintelligence Krüger's award winning study examines the historical and philosophical context of these futuristic promises by Ray Kurzweil Nick Bostrom Frank Tipler and other posthumanist thinkers **Humanity's Rise to Superdominance, the Global Ecological Crisis, and the Way Forward for Education** Adam C. Scarfe, 2022-12-01 This book pinpoints the evolutionary connection between the global ecological crisis and transgenerational learning and education As Julian Huxley 1887 1975 described the cumulative passing down of knowledge skills and ideas by one generation to the next over eons of time which has been afforded by the advent of complex languages in the evolutionary past is chiefly responsible for humanity's planetary superdominance However given that the drive of the human species to increase its control over the natural world has today run up against ecological limits there is an evolutionary existential choice to be made in relation to the ultimate purposes of formal education Should humanity double down on the anthropocentric humanist project of superdominance including the goals of unlimited economic growth development and scientific and technological progress Alternatively should a biocentric anti

humanist and or postmodernist deconstruction of formal education take place Or should a holistic organicist orientation emphasizing biological wisdom help to shape its future As this book shows the answers to these philosophical questions on the parts of educators prospective teachers and learners will going forward play a key role in deciding the evolutionary trajectories of all life forms on the planet

The Death of Evolution Wallace Johnson,2001-01-02 Mr Johnston confesses that he used to be a believer in Evolution But reading a book on the subject opened his eyes and after much study he wrote this present book He gives both scientific findings and Catholic teaching to show that the theory of Evolution is incompatible with both Catholic teaching and common sense His reason for studying Evolution as he quotes one eminent writer is that Every attack on the Christian Faith made today has as its basis the doctrine of Evolution

The Cold War Politics of Genetic Research William deJong-Lambert,2012-02-13 This book uses the reaction of a number of biologists in the United States and Great Britain to provide an overview of one of the most important

controversies in Twentieth Century biology the Lysenko Affair The book is written for advanced undergraduate and graduate students of history history of science It covers a number of topics which are relevant to understanding the sources and dimensions of the Lysenko controversy including the interwar eugenics movement the Scopes Trial the popularity of Lamarckism as a theory of heredity prior to the synthesis of genetics and Natural Selection and the Cold War The book focuses particularly on portrayals both positive and negative of Lysenko in the popular press in the U S and Europe and thus by extension the relationship between scientists and society Because the Lysenko controversy attracted a high level of interest among the lay community it constitutes a useful historical example to consider in context with current topics that have received a similar level of attention such as Intelligent Design or Climate Change **History Within** Marianne

Sommer,2016-05-27 Personal genomics services such as 23andMe and Ancestry com now offer what once was science fiction the ability to sequence and analyze an individual s entire genetic code promising in some cases facts about that individual s ancestry that may have remained otherwise lost Such services draw on and contribute to the science of human population genetics that attempts to reconstruct the history of humankind including the origin and movement of specific populations Is it true though that who we are and where we come from is written into the sequence of our genomes Are genes better documents for determining our histories and identities than fossils or other historical sources Our interpretation of gene sequences like our interpretation of other historical evidence inevitably tells a story laden with political and moral values Focusing on the work of Henry Fairfield Osborn Julian Sorell Huxley and Luigi Luca Cavalli Sforza in paleoanthropology evolutionary biology and human population genetics History Within asks how the sciences of human origins whether through the museum the zoo or the genetics lab have shaped our idea of what it means to be human How have these biologically based histories influenced our ideas about nature society and culture As Marianne Sommer shows the stories we tell about bones organisms and molecules often change the world *Proceedings of the Annual International Conference on Social*

Guided Evolution of Society Bela H. Banathy,2013-03-09 Based on a comprehensive review of human and societal

evolution the book develops an approach to conscious self guided evolution In the course of the evolutionary journey of our species there have been three seminal events The first happened some seven million yeas ago when our humanoid ancestors entered on the evolutionary scene Their journey toward the second crucial event lasted over six million years when as the greatest event of our evolutionary history homo sapiens sapiens started the revolutionary process of cultural evolution Today we have arrived at the threshold of the third major event the revolution of conscious evolution when it becomes our responsibility to enter into the evolutionary design space and guide the evolutionary journey of our species The book tells the story of the first six million years of the journey in just enough detail to understand how evolution had worked in times when it was primarily biological driven by natural selection With the human revolution some fifty thousand years ago with the emergence of self reflective consciousness the evolutionary process transformed from biological into cultural From this point on the book follows the journey with detailed attention in order to learn how cultural evolution works The book is organized in three parts Part One commences with an exposition of a brief history of the evolutionary idea through time with a focus on a review of the science of general evolution and specifically social and societal evolution Next the book unfolds the evolutionary story of our species from the time when the first humanoids entered the evolutionary scene to our current era Part Two develops a systems view of evolution explores the ways and means of how evolution works characterizes evolutionary consciousness and develops the idea of conscious evolution Part Three builds upon the knowledge developed in the first two parts and sets forth the key conditions of conscious self guided evolution elaborating the core condition which is the acquisition of evolutionary competence through evolutionary learning The focus of this part is on an approach to the design of evolutionary guidance systems that our families neighborhoods communities organizations social and societal systems can use to design the future they aspire to attain The work is set aside from other statements in three important ways It provides 1 a comprehensive review of how evolution has worked with a focus on socio cultural evolution 2 an explanation of evolutionary consciousness and the conditions of engaging in conscious evolution and 3 most significantly it develops a detailed approach and a methodology to the design of evolutionary guidance systems **Routledge Library**

Children in Street Situations Riccardo Lucchini,Daniel Stoecklin,2019-11-05 This book provides new insights on the lives of children in street situations by providing analyses from a qualitative perspective on the sociology of childhood It proposes

some insightful perspectives on the current discussion about the rights of children in street situations. It includes a unique selection of texts which were initially published in French written by the authors of this volume on the lives of children in street situations in Latin America and China that are now available to an English readership. It challenges obstacles linked to macrosocial issues such as inequalities, images of the child, the separation of public/private spheres, urban dynamics and structural adjustments as well as to microsocial dimensions such as identity, motivation and activities that are constitutive of street situations. The book discusses the situations experienced by children, highlighting children's reflexivity and strategies as social factors and shedding new light on the debate agency within structure.

Evolution on British Television and Radio
Alexander Hall, 2021-09-30. This book charts the history of how biological evolution has been depicted on British television and radio from the first radio broadcast on evolution in 1925 through to the 150th anniversary of Charles Darwin's *Origin of the Species* in 2009. Going beyond science documentaries, the chapters deal with a broad range of broadcasting content to explore evolutionary themes in radio dramas, educational content and science fiction shows like *Doctor Who*. The book makes the case that the dominant use in science broadcasting of the evolutionary epic, a narrative based on a progressive vision of scientific endeavour, is part of the wider development of a standardised way of speaking about science in society during the 20th century. In covering the diverse range of approaches to depicting evolution used in British productions, the book demonstrates how their success had a global influence on the genres and formats of science broadcasting used today.

Nature Alive Adam Scarfe, 2018-04-18. This volume pays homage to Alfred North Whitehead's 1861-1947 profound lecture and essay entitled *Nature Alive*, which was one of his most mature expressions of his process-relational metaphysics, a holistic conceptual framework that renders vivid the dynamic character of the natural world and the intrinsic purposiveness, selective agency and creativity of living organisms. Inspired by but not beholden to Whitehead's process-metaphysical lens, the contributors to this volume bring a multiplicity of philosophical orientations to the table in challenging the mechanistic and reductionistic neo-Darwinian paradigm that is still dominant today in the life sciences. Mechanistic neo-Darwinism views nature and living organisms as machines, namely as networks of externally related and linear causal switches, dials, levers, pulleys and gears that are at the ready for technological and biotechnological manipulation. Seeking a conceptual framework and a language that are more adequate to the study of the natural world and of living creatures than the mechanistic orientation, the contributors to this volume explore several of the New Frontiers of Biology, which are areas of biology whose findings to some extent go beyond the explanatory confines of the Modern Synthesis of natural selection and genetics. Most notably, emergence theory, the theory of organic selection, epigenetics, homeostasis, chronobiology and autopoiesis research can provide us with key insights that can assist us in explaining how living agents emerged, including the evolutionary origins of mentality, consciousness and mind. Moreover, attention to the New Frontiers of Biology can serve to re-enchant our understanding of the natural world and to prevent ecological devastation through a restoration to objectivity of notions such

as intrinsic purposiveness selective agency creativity and intrinsic value Encyclopedia of Anthropology H. James
Birx, 2006 Focuses on physical social and applied anthropology archaeology linguistics and symbolic communication Topics
include hominid evolution primate behaviour genetics ancient civilizations cross cultural studies and social theories
