## **Evolutionary History Of The Avian Genus Chrysococcyx:**

*The Evolutionary History of the Avian Genus Chrysococcyx* Herbert Friedmann, 1968 The genus Chrysococcyx is one of a number of genera of cuckoos that are brood parasites in their reproductive habits Their phylogeny differentiation dispersal and ethology all of which are reviewed in a comparative yet detailed way for the first time in this paper are of interest in themselves not only as a special case history in the development of parasitism but also for the light they throw on the broad general problems of evolution of parasitic reproduction in the cuckoos as a family and in birds in general **The**

**Evolutionary History of the Avian Genus Chrysococcyx (Classic Reprint)** Herbert Friedmann, 2016-07-05 Excerpt from *The Evolutionary History of the Avian Genus Chrysococcyx* Museum study specimens were examined to ascertain the nature the frequency and the distribution within and between the dozen members of the genus of the types of plumage patterns plumage phases and kinds and degrees of variation within these patterns and phases This survey was made with an eye to any phylogenetic suggestions that might be adduced from the many hundreds of specimens studied About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

**Systematics and Taxonomy of Australian Birds** Les Christidis, Walter E Boles, 2008-01-25 Systematics and Taxonomy of Australian Birds presents an up to date classification of Australian birds Building on the authors 1994 book *The Taxonomy and Species of Birds of Australia and its Territories* it incorporates the extensive volume of relevant systematic work since then The findings of these studies are summarised and evaluated in the explanations for the taxonomic treatments adopted and with the extensive citations the book serves as a comprehensive introduction to the recent systematic literature of Australian birds All species of birds that have been recorded from the Australian mainland Tasmania island territories and surrounding waters are treated and listed Along with extant native species all accepted vagrants recently extinct since 1800 native species and established introduced species are included **Zoological Catalogue of Australia** Richard

Schodde, 1997 *The Avian Brood Parasites* Paul A. Johnsgard, 1997-11-06 The evolutionary ecological and behavioral questions posed by obligate brood parasites are among the most intriguing of all contemporary ornithological topics Avian brood parasites lay their eggs in the nests of other birds and may be a major contributing factor driving several species of songbirds to near extinction As one of the first books to present a comprehensive overview of this fascinating phenomenon this work discusses the comparative biology and co evolutionary adaptations exhibited by the five families of birds that engage in such behavior Several chapters dealing with the comparative biology of both intraspecific and interspecific brood

parasites are followed by individual accounts of all known species nearly 100 altogether primarily cowbirds and cuckoos Some of the more remarkable behavioral and structural adaptations of these birds include egg mimicry juvenile mimicry elimination by starvation or actual attack of other nestlings or host eggs and even the learning and partial mimicry of host song traits An extended glossary a list of Latin names 400 literature citations and range maps of all parasitic species discussed are also included Detailed line drawings by the author enhance this synthesis of biological and ecological information

**The Birds of Northern Melanesia** Ernst Mayr, Jared M. Diamond, 2001 Speciation is the process by which co existing daughter species evolve from one ancestral species e g humans chimpanzees and gorillas arising from a common ancestor around 5 000 000 years ago However many questions about speciation remain controversial The Birds of Northern Melanesia provides by far the most comprehensive study yet available of a rich fauna composed of the 195 breeding land and fresh water bird species of the Bismarck and Solomon Archipelagoes east of New Guinea This avifauna offers decisive advantages for understanding speciation and includes famous examples of geographic variation discussed in textbooks of evolutionary biology The book results from 30 years of collaboration between the evolutionary biologist Ernst Mayr and the ecologist Jared Diamond It shows how Northern Melanesian bird distributions provide snapshots of all stages in speciation from the earliest widely distributed species without geographic variation to the last closely related reproductively isolated species occurring sympatrically and segregating ecologically The presentation emphasizes the wide diversity of speciation outcomes steering a middle course between one model fits all simplification and ungeneralizable species accounts Questions illuminated include why some species are much more prone to speciate than others why some water barriers are much more effective at promoting speciation than others and whether hypothesized taxon cycles faunal dominance and legacies of Pleistocene land bridges are real These years of study have resulted in a huge database complete with distributions of all 195 species on 76 islands together with their taxonomy colonization routes ecological attributes abundance and overwater dispersal Color plates depict 88 species and allospecies many of which have never been seen before For students of speciation Northern Melanesian birds now constitute a model system against which other biotas can be compared For population biologists interested in other problems besides speciation this rich database can now be mined for insights

**The Cuckoos** Robert B. Payne, 2005-07-14 The cuckoos are the most variable birds in social behavior and parental care a few cuckoos are among the most social of all birds and rear their young in a common nest most cuckoos are caring parents that rear their own young with some females laying a few eggs in the nests of others while many cuckoo species are brood parasites who leave their eggs in the nests of other birds to rear with their young maturing to kill their foster nestmates In The Cuckoos Robert B Payne presents a new evolutionary history of the family based on molecular genetics and uses the family tree to explore the origins and diversity of their behaviour He traces details of the cuckoos biology to their original sources includes descriptions of previously unpublished field observations and reveals new comparisons of songs showing

previously overlooked cuckoo species Lavishly illustrated with specially commissioned colour plates and numerous maps halftones and line drawings The Cuckoos provides the most comprehensive and up to date account of this family yet available

**Ecology and Management of Cowbirds and Their Hosts** James N. M. Smith, Terry L. Cook, Stephen I. Rothstein, Scott K. Robinson, Spencer G. Sealy, 2014-09-05 In the past two centuries cowbirds have increased in numbers and extended their range across North America while many of the native songbird species whose nests they parasitize to raise their young have declined This timely book collects forty essays by most of the principal authorities on the biology and management of cowbirds The book s goals are to explore the biology of cowbirds the threats they pose to host species and populations and the management programs that are being undertaken to minimize these threats The book is organized into five sections each with an extended editors introduction that places the contributions in a broad up to date setting The sections cover The changing abundance of cowbirds and the ways in which their numbers can be estimated Host choice by cowbirds the negative effects of cowbirds on particular host species and the daily patterns of cowbird behavior Behavioral interactions between cowbirds and specific host species Patterns of cowbird abundance and host use across varying landscapes Management programs designed to control cowbirds and protect threatened songbirds

**Birds of New Guinea** Bruce M. Beehler, Thane K. Pratt, 2016-03-29 New Guinea the largest tropical island supports a spectacular bird fauna characterized by cassowaries megapodes pigeons parrots kingfishers and owl nightjars as well as the iconic birds of paradise and bowerbirds Of the nearly 800 species of birds recorded from New Guinea more than 350 are found nowhere else on Earth This comprehensive annotated checklist of distribution taxonomy and systematics of the birds of New Guinea is the first formal review of this avifauna since Ernst Mayr s Checklist published in 1941 This new book brings together all the systematic taxonomic and distributional research conducted on the region s bird families over the last 70 years Bruce Beehler and Thane Pratt provide the scientific foundation for the names geographic distributions and systematic arrangement of New Guinea s bird fauna All technical information is annotated and a geographic gazetteer and bibliography are included This book is an ideal complement to the Birds of New Guinea field guide also published by Princeton and is an essential technical reference for all scientific libraries ornithologists and those interested in bird classification The first complete revision of the New Guinea bird fauna since 1941 Accounts for 75 bird species new to the region Includes a geographic gazetteer bibliography and explanations of taxonomic and systematic classifications
