Examination Of The Back An Introduction:

Examination of the Back - An Introduction J.K. Paterson,L. Burn,1986-04-30 Lumbar Spine Syndromes Gunnar B.J. Andersson,Thomas W. McNeill,2012-12-06 The question facing anyone contemplating a book on low back pain is Why write another book It is certainly true that there are many books on this topic addressing a wide variety of audiences Some books are all inclusive and scholarly in nature others are personal descriptions of diagnostic and treatment philosophies This book is a combination of these two extremes It represents our views on the low back problem supported by scientific data Most aspects on back pain presented in this book can be found in other texts The organization of the material is unique however Our approach is to start by listening to and looking at the patient It becomes apparent then that patients can be classified into one of the syndromes described in chapters 4 through 13 We believe that this syndrome classification which is quite simple to make clinically will allow you to diagnose and treat your patients more effectively To set the stage for the syndrome chapters the first three chapters of the book are generic to the remaining chapters They review the epidemiology pathology biomechanics etiologic theory diagnostic methods and treatment modalities applicable to the low back syndromes They should be read before the syndrome chapters At the end of the book you will find four chapters that are specific to disease entities

Introduction to Phenomenological Research Martin Heidegger,2005-05-03 In this collection of early lectures the author of Being and Time defines and begins to develop his unique approach to phenomenology This volume contains the first lectures Martin Heidegger delivered at Marburg in the winter semester of 1923 1924 In them he introduces the notion of phenomenology by tracing it back to Aristotle's treatments of phenomenon and logos This extensive commentary on Aristotle is an important addition to Heidegger's ongoing interpretations which accompany his thinking during the period leading up to Being and Time Additionally these lectures develop critical differences between Heidegger's phenomenology and that of Descartes and Husserl and elaborate questions of facticity everydayness and flight from existence that are central in his later work Here Heidegger dismantles the history of ontology and charts a new course for phenomenology by defining and distinguishing his own methods
