A Neurodevelopmental Approach to Specific Learning Disorders Hilary Hart, Kingsley Whitmore, Guy Willems, 1999-02-03 This volume considers the neurodevelopmental disorders such as dyslexia dyscalculia dysgraphia clumsiness and indeed all those learning difficulties to be found in a normal school population with an IQ of more than 70 Specific ideas about the causes of these disorders are presented along with very practical preventative and management information which will be welcomed by a wide range of professionals with an interest in paediatrics neurology developmental and educational psychology

A Neurophysiological Basis for the Treatment of Cerebral Palsy Karel Bobath, 1991-01-16 This new and extensively revised edition of one of the most popular of the Clinics series brings the original work up to date and clarifies Karel Bobath's account of the neurophysiological mechanisms underlying the motor disorders of cerebral palsy It also highlights the advantages of very early treatment of infants before the disordered postures and movements are established All those involved with physically handicapped children and especially therapists will find the book invaluable reading

Neurological Evaluation of Infants and Children Henry W. Baird, 1983 This book explains clearly how to examine and assess a young child who has a possible neurological problem The emphasis is on the logical approach to identifying the child's problem and encompasses a thorough assessment of the child's needs The book includes a comprehensive section on developmental assessment from birth through the preschool years it also reviews all the specialized investigation techniques with which the clinician needs to be familiar The authors are both experts in their field and write from a wealth of clinical experience Their concern for the child within his family and wider environment is underlined throughout the text The skills involved in the neurological evaluation of the child are carefully and thoroughly explained

Attention Deficit Disorder Terje Sagvolden, 2013-12-16 First published in 1988 This book grew out of an European Brain and Behaviour Society Workshop on Attention Deficit Disorder Minimal Brain Dysfunction Hyperkinetic Syndrome and related dysfunctions held in Oslo Norway in 1987 Virtually millions of children and adults suffer from problems variously described as attention deficit disorder ADD minimal brain dysfunction MBD hyperkinetic syndrome or most recently attention deficit hyperactivity disorder ADHD A main conclusion of the conference was that the attention problems of ADD children might be secondary to basic motor control problems

Neurological Problems in Childhood Neil Gordon, 2013-10-22 *Neurological Problems in Childhood* focuses on developmentally deviating and disabled children This book provides an explicit and a well balanced analyses and compilations of signs and symptoms of neurological problems and how to deal with them in the examination room Organized into 14 chapters this book begins with an overview of the process of neurological examination relevant to the neonate and the infant This text then discusses the significance of obtaining a careful description of symptoms and the need to question the child as well as the parents Other chapters consider the variety of disorders that are genetically determined This book discusses as well the abnormalities at birth due to faults in the early growth and development of the body The final chapter

deals with the advances in the field of genetics that contribute to the management of neurological diseases This book is a valuable resource for pediatric neurologists general pediatricians and public health physicians Attention Deficit Disorder Pod Terje Sagvolden,2013-12-16 First published in 1988 This book grew out of an European Brain and Behaviour Society Workshop on Attention Deficit Disorder Minimal Brain Dysfunction Hyperkinetic Syndrome and related dysfunctions held in Oslo Norway in 1987 Virtually millions of children and adults suffer from problems variously described as attention deficit disorder ADD minimal brain dysfunction MBD hyperkinetic syndrome or most recently attention deficit hyperactivity disorder ADHD A main conclusion of the conference was that the attention problems of ADD children might be secondary to basic motor control problems **Carbohydrate Metabolism in Pregnancy and the Newborn · IV** Hamish W. Sutherland,John M. Stowers,Donald W.M. Pearson,2012-12-06

Traditions are dangerous doubly so in science Traditions are unchanging science is about change This was the 4th International Colloquium on Carbohydrate Metabolism in Pregnancy and the Newborn to be held in Aberdeen and by now the form is set How much its content has changed is a matter of nice judgement and not under the control of the organizers It is not within their power to bring news of revolution if there has been no revolution Certainly many of the speakers had kent faces from previous Aberdeen meetings but so they would be at any meeting on diabetes anywhere in the world The written proceedings of scientific conferences have purposes other than to record changes sometimes they need to state a consensus The 3rd Colloquium came to an agreement about the importance of prepregnancy recognition and control of abnormalities of carbohydrate metabolism The 4th set out to examine what results it had achieved Much of this book is taken up with follow up studies of the applications of similar regimes in different parts of the world Since the first Aberdeen meeting in 1973 progress in the manage ment of diabetic pregnancy has been slow and steady but the change in the city and the society where the meetings took place has been fast *Short and Long Term Effects of Breast Feeding on Child Health* Berthold Koletzko,Kim Fleischer Michaelsen,Olle Hernell,2000-09-30

Proceedings of the 9th International Conference of the International Society for Research in Human Milk and Lactation ISRHML October 2 6 1999 Bavaria Germany The quality of infant feeding is of major importance for child health development and well being and breast feeding is the natural form of supplying food to the infant and is considered to be ideally adapted to the needs of both mother and child This contributed volume therefore brings together the research on the physiological foundations and on the biological effects of breast feeding both short and long term This book contains the work of scientists from over thirty countries many of whom are leading researchers in their fields and details papers presented by the invited speakers of the conference and short summaries of presentations of original research results

The Development of Mature Walking David Sutherland,Richard Olshen,Edmund Biden,1988 This important monograph summarizes a comprehensive study on the maturation of walking in normal children Research undertaken at one of the world s leading gait analysis centers involved over 400 studies on a total of nearly 300 children in ten age groups from one to seven

years Data are presented on anthropometric measurements tests of developmental progress time distance parameters such as stride length and walking velocity twelve joint angles on each side measured throughout the gait cycle dynamic electromyography of phasic activity in seven lower extremity muscle groups and force measurements including vertical force fore aft shear medial lateral shear and torque At each age composite joint angle graphs and time distance parameters are brought together with film tracings of a representative child in that age group In addition advanced methods of statistical analysis have been applied to the joint angle data to define prediction regions within which ninety five percent of normal children should lie throughout the gait cycle Finally a decision tree is presented from which a fitted age can be inferred for a subject based on non age specific data gathered in a motion analysis lab Practical applications are demonstrated in a chapter devoted to two case studies

Developmental Medicine and Child Neurology ,1990 Developmental Examination of Infants and Preschool Children

Dorothy F. Egan,1990 This book is a practical guide for primary care doctors and health visitors involved in the detection of developmental problems in children whose parents are worried that their child is not developing like other children It will be of assistance to pediatricians and pediatric neurologists in providing a developmental perspective in the diagnostic process in their work with children with chronic neurological disorders The tests described have been standardized by the author and cover the essentials of developmental examination history including parents views of their child s development clinical tests of hearing examination of visual behavior and visual acuity observation of developing motor skills language performance profiles in which any substantial unevenness or an overall low score may reveal a developmental problem In practice the range of average ability is wide so a distinctive feature of this book is a standardized data base in graphical form that can be used to identify readily those children lowest twenty percent who warrant further specialist investigation or treatment It is

particularly relevant today when general practitioners are being directed to take an active role in such preventive work

Apraxia Leslie J. Gonzalez Rothi, Kenneth M. Heilman, 2014-06-03 The purpose of this book is to provide the reader with a perspective on apraxia that considers a link between the pathology of apraxia and normal motor skill In addition it is the intention of the authors to provide information that is theoretically interesting as well as clinically applicable The book is a collection of papers by various authors working in the area of apraxia almost exclusively with limb apraxia specifically Beginning with Hugo Liepmann's work of the late 19th century a cognitive neuropsychological model of limb apraxia is reviewed the use of new technologies that are informative about the mechanisms of limb praxis are discussed and issues related to research as well as clinical assessment management of the disorder are provided While acquired limb apraxia is the focus of the book there are also chapters on handedness developmental apraxia of speech and disorders of handwriting

Psychology A.F. Kalverboer, M.L. Genta, J.B. Hopkins, 2012-12-06 This volume contains a number of contributions which concern basic issues in the field of brain behavioural development in the human especially with regard to the young child They have been written by distinguished scientists active in this field who have all been participating in an Erasmus teachers exchange program entitled Biopsychology of Development ICP NL 3026 14 This volume is the product of this cooperation The book is intended for scientists in this and related fields as well as for graduate students and advanced undergraduates as a means of updating their knowledge about human brain behaviour development It offers a contemporary review methodologically and theoretically of some basic issues in early human brain behaviour development Attention is paid to normal development and also to deviance as exemplified by discussions on child abuse and on early development of preterms and children of deaf mothers For the title of the book we have chosen for the term Developmental Psychology with as a subtitle biopsychological perspectives in order to express our interest in the basic requirements in the organism for an optimal adaptation during ontogeny as well as in the mechanisms underlying maladaptive behaviour The term may indicate that we are not just focusing on higher brain functions which would be suggested by the term Developmental Neuropsychology Further it is meant to express our interest in the integrated study of normal and deviant development without a particular focus on abnormality which would be suggested by the term Developmental Psychopathology

Paediatric Neurology Edward Morgan Brett, Edward M. Brett, 1991 This revised and expanded edition examines the various facets of paediatric neurology Topics covered include spinocerebellar degenerations and some related conditions progressive neurometabolic brain disease and imaging in child neurology *Cerebral Palsy in Infancy* Roberta B.

Shepherd, 2013-08-18 *Cerebral Palsy in Infancy* is a thought provoking book which introduces a new way of thinking on the development and use of interventions Relevant to current practice it advocates early targeted activity that is focused on

increasing muscle activation training basic actions and minimizing or preventing maladaptive changes to muscle morphology and function. The authors present recent scientific findings in brain science, movement sciences, developmental biomechanics, motor control mechanisms, motor learning, exercise science, and muscle biology. This knowledge provides the rationale for active intervention underpinning the need for an early referral to appropriate services. The book features methods for promoting relatively intensive physical activity in young infants without placing a burden on parents, which include assistive technologies such as robotics, electronic bilateral limb trainers, and baby treadmills. Cerebral Palsy in Infancy begins by specifying the guidelines for training and exercise, outlining the rationale for such intervention. It goes on to cover the fundamentals of neuromotor plasticity and the development and negative effects of limited motor activity on brain organization and corticospinal tract development. Neuromuscular adaptations to impairments and inactivity are discussed along with the General Movement assessment that can provide early diagnosis and prognosis, facilitating very early referral from paediatric specialists to training programs. The book ends with a section featuring various methods of training with the emphasis on preventing/minimizing muscle contracture, stimulating biomechanically critical muscle activity, and joint movement. An ideal clinical reference for those working to improve the lives of infants suffering from cerebral palsy.

Discusses new research and new evidence-based treatment interventions, shows how to organize very early and intensive physical activity in young infants to stimulate motor development and growth. Therapies include the specificity of training and exercise with emphasis on promoting muscle activity and preventing contracture by active instead of passive stretching. Methods include new interactive technologies in enhancing home-based training sessions carried out by the infant's family. Extensive referencing in each chapter for further study. Chapters feature Annotations which illustrate scientific findings.
