## **Ecology Of Humic Substances In Freshwaters:**

**Ecology of Humic Substances in Freshwaters** Christian Steinberg, 2013-11-11 Humic Substances color all waters more or less brown Their concentrations exceed all carbon of living organisms by at least one order of magnitude Opposite to former paradigms they participate in almost any metabolic pathway They protect against UV irradiation enable indirect photolysis and thus purify hazardous chemicals they provide inorganic and organic nutrients may form cryptic genes with DNA and dampen metabolic fluctuations More recently they can increase adverse effects of hazardous chemicals and they can directly interfere with organisms The book tries to relate effects to structural features *Ecology of Freshwaters* Brian R. Moss, 2018-06-11 The new edition of this established textbook now with full colour illustration has been extensively revised and continues to provide a comprehensive stimulating readable and authoritative coverage of freshwater habitats their communities and their functioning the world over The work will be of great value to undergraduate and graduate students fellow researchers and water managers and the plain language and lack of jargon should make it accessible to anyone interested in the functioning and current state of lakes and rivers Having taught and researched over fifty years and six continents Professor Brian Moss makes here extensive use of his personal experience as well as the huge literature now available on freshwaters This is the fifth edition of his textbook which since the first edition in 1980 has steadily evolved to reflect a rapidly changing science and environment It places increasing emphasis on the role of people in damaging and managing freshwaters as we move into the Anthropocene epoch and face unprecedented levels of climate and other changes whilst rejoicing in the fascination of what are left of near pristine freshwater ecosystems Professor Moss retired from the University of Liverpool following a career in Africa the USA and the UK He was awarded medals by the International Society for Limnology of which he was President from 2007 to 2013 and The Institute of Ecology and Environmental Management He was given The Ecology Institute s Excellence in Ecology Prize in 2009 and the book written for that prize *Liberation Ecology* was awarded the British Ecological Society s best ecology book prize in 2013 **Biogeochemistry of Inland Waters** Gene E. Likens, 2010-05-20 A derivative of the Encyclopedia of Inland Waters *Biogeochemistry of Inland Waters* examines the transformation flux and cycling of chemical compounds in aquatic and terrestrial ecosystems combining aspects of biology ecology geology and chemistry Because the articles are drawn from an encyclopedia they are easily accessible to interested members of the public such as conservationists and environmental decision makers This derivative text describes biogeochemical cycles of organic and inorganic elements and compounds in freshwater ecosystems **Ecology of Freshwater Nematodes** Walter Trautspurger, 2021-07-16 Nematodes are incontestably the most numerous and the most diverse metazoans in freshwater habitats and these properties bestow exceptional significance to their role in the environment An array of functional roles has been attributed to them they are grazers on bacteria and primary producers regulators of decomposition of plant material predators prey for other animals and closely associated symbionts of bacteria

and other organisms Freshwater nematodes are central in the context of environmental monitoring pollution assessments global warming and food webs and this is increasingly being recognized Moreover the short generation time a few days to months of many species makes nematodes ideal for laboratory studies This book offers guidelines for studying the ecology of free living nematodes including detailed protocols and case studies **Environmental Chemistry, Eighth Edition** Stanley E. **Ecology and Evolution of the Freshwater Mussels Unionoida** G. Bauer, K. Wächtler, 2012-12-06 All those who think that bivalves are boring are in the best company Karl von Frisch is reported to have turned the pages more quickly in texts where bivalves were treated because according to him they literally lack any behaviour The fact that they can filtrate huge amounts of water burrow into the sediment actively swim drill holes into rocks and boats or detect shadows with the aid of pretty blue eyes located on the rim of their mantle obviously left v Frisch unimpressed Why then a book on the large freshwater mussels Naiads or Unionoida which on first sight are much less spectacular than the marine ones The main reason is that they are keepers of secrets which they reveal only on close and careful inspection This is not only true for the pearls some species produce and which over centuries have contributed to the treasures of bishops and kings but particularly for their ecology their life cycles are linked with those of fishes some can occur in incredible densities and some can live for more than 100 years Thus the presence or absence of naiads in a lake or stream has manifold implications Encyclopedia of Inland Waters, 2009-01-13 Inland aquatic habitats occur world wide at all scales from marshes swamps and temporary puddles to ponds lakes and inland seas from streams and creeks to rolling rivers Vital for biological diversity ecosystem function and as resources for human life commerce and leisure inland waters are a vital component of life on Earth The Encyclopedia of Inland Waters describes and explains all the basic features of the subject from water chemistry and physics

to the biology of aquatic creatures and the complex function and balance of aquatic ecosystems of varying size and complexity Used and abused as an essential resource it is vital that we understand and manage them as much as we appreciate and enjoy them This extraordinary reference brings together the very best research to provide the basic and advanced information necessary for scientists to understand these ecosystems and for water resource managers and consultants to manage and protect them for future generations Encyclopedic reference to Limnology a key core subject in ecology taught as a specialist course in universities Over 240 topic related articles cover the field Gene Likens is a renowned limnologist and conservationist Emeritus Director of the Institute of Ecosystems Research elected member of the American Philosophical Society and recipient of the 2001 National Medal of Science Subject Section Editors and authors include the very best research workers in the field

**Aquatic Humic Substances** Dag O. Hessen, 1998-07-16 Humic substances occur in all kinds of aquatic systems but are particularly important in northern coniferous areas They strongly modify the aquatic ecosystems and also constitute a major problem in the drinking water supply This volume covers all aspects of aquatic humic substances from their origin and chemical properties their effects on light and nutrient regimes and biogeochemical cycling to their role regarding organisms productivity and food web organization from bacteria to fish Special emphasis is paid to carbon cycling and food web organization in humic lakes but aspects of marine carbon cycling related to humus are treated as well

BOOK JACKET *The Role of Nonliving Organic Matter in the Earth's Carbon Cycle*

Richard G. Zepp, Ch. Sonntag, 1995-07-11 Nonliving organic matter NLOM comprises the bulk of the organic carbon stored in the terrestrial biosphere and a major part of the organic carbon in the sea Organic substances which include litter marine detritus dissolved organic matter and soil organic matter have diverse effects on the Earth's biogeochemical processes and serve as a major reservoir of biospheric carbon which can be transformed to carbon dioxide methane and other greenhouse gases Given this broad spectrum of effects efforts to adapt to or perhaps benefit from global change require a better understanding and an ability to predict the role of NLOM in the global environment The overall objective of this volume is to provide experimental and modeling strategies for the assessment of the sensitivity of the global carbon cycle to changes in nonliving organic pools in terrestrial and aquatic ecosystems The discussions in this volume consider how best to characterize and quantify pools and fluxes of NLOM the role of NLOM cycling on a global scale human and climatic perturbations of interactions between NLOM and nutrients and biological chemical and physical processes that control the production and degradation of NLOM with an emphasis on processes that affect the persistence of NLOM in the environment One of the most unique aspects of this volume is that it represents extensive exchanges between leading international scientists from both aquatic and terrestrial backgrounds It will be of particular interest to organic geochemists microbiologists ecologists soil scientists agricultural scientists marine chemists limnologists and modelers Goal of this Dahlem Workshop to devise experimental and modeling strategies for assessment of the sensitivity of the global carbon cycle to changes in nonliving organic pools
