Lovett, Christian Albert, 2019-06-25 Human well being depends in many ways on maintaining the stock of natural resources which deliver the

services from which humans benefit. However, these resources and flows of services are increasingly threatened by unsustainable and competing land uses. Particular threats exist to those public goods whose values are not well represented in markets or whose deterioration will only affect future generations. As market forces alone are not sufficient, effective means for local and regional planning are needed in order to safeguard scarce natural resources, coordinate land uses, and create sustainable landscape structures. This book argues that a solution to such challenges in Europe can be found by merging the landscape planning tradition with ecosystem services concepts. Landscape planning has strengths in recognition of public benefits and implementation mechanisms, while the ecosystem services approach makes the connection between the status of natural assets and human well-being more explicit. It can also provide an economic perspective focused on individual preferences and benefits, which helps validate the acceptability of environmental planning goals. Thus, linking landscape planning and ecosystem services provides a two-way benefit, creating a usable science to meet the needs of local and regional decision making. The book is structured around the Driving forces-Pressures-States-Impacts-Responses framework, providing an introduction to relevant concepts, methodologies, and techniques. It presents a new ecosystem services-informed approach to landscape planning that constitutes both a framework and toolbox for students and practitioners to address the environmental and landscape challenges of 21st-century Europe.

The Professional Practice of Environmental Management
Robert S. Dorney, 2012-12-06. This series is dedicated to serving the growing community of scholars and practitioners concerned with the principles and applications of environmental management. Each volume is a thorough treatment of a specific topic of importance for proper management practices. A fundamental objective of these books is to help the reader discern and implement man's stewardship of our environment and the world's renewable resources. For we must strive to understand the relationship between man and nature, act to bring harmony to it, and nurture an environment that is both stable and productive. These objectives have often eluded us because the pursuit of other individual and societal goals has diverted us from a course of living in balance with the environment. At times, therefore, the environmental manager may have to exert restrictive control, which is usually best applied to man, not nature. Attempts to alter or harness nature have often failed or backfired, as exemplified by the results of imprudent use of herbicides, fertilizers, water, and other agents. Each book in this series will shed light on the fundamental and applied aspects of environmental management. It is hoped that each will help solve a practical and serious environmental problem.

Commentary James W. Curlin, 1972 *Ecologically Based Municipal Land Use Planning* William B Honachefsky, 2019-07-03 In the decades following the first Earth Day in 1970 a generation has been enlightened about the unspeakable damage done to our planet Federal state and local governments generated laws and regulations to control development and protect the environment Local governments have developed environmental standards addressing their needs The result an ecologically incongruous pattern of land development known as urban sprawl Local land use planners can have a greater effect on the quality of our environment than all of the federal and state regulators combined Historically they have existed on the periphery of land management The author suggests that federal and state environmental regulators need to incorporate local governments into their environmental protection plans Ecologically Based Municipal Land Use Planning provides easily understood nuts and bolts solutions for controlling urban sprawl emphasizing the integration of federal state and local land use plans The book discusses ecological resources and provides practical solutions that municipal planners can implement immediately It discusses the most recent scientific data how to extract what is important and how to apply it to the local land planning process The author includes the application of the Geographic Information Systems GIS to problem solving Despite compelling evidence and sound arguments favoring the implementation of an ecologically sensitive approach to land use planning municipal planners in general remain skeptical It will take considerably more encouragement and education to win them over completely Ecologically Based Municipal Land Use Planning makes the case for sound land use policies that will reduce sprawl

Ecological Research Series, 1976 **Functions of Nature** Rudolf S. de Groot, Dolf de Groot, 1992 Although there is a growing awareness about the many benefits of protected areas concrete information about their full economic value is still scarce This book provides a comprehensive method whereby all functions and values of natural and semi natural ecosystems can be assessed and evaluated in a systematic manner A checklist of 37 environmental functions is given with examples of the functions and socio economic value of three major types of ecosystems tropical moist forests wetlands and an oceanic island ecosystem the Galapagos National Park In order to achieve the conservation and sustainable utilization of nature and natural resources better information on the economic value of natural areas alone however is not enough Unless ecological information is structurally integrated in the planning and decision making process solving the environmental problems of today will prove difficult if not impossible In the last chapter of the book examples are therefore given of how the environmental function concept can be used as a tool in environmental

planning management and decision making and stresses the need for ecologizing economic theory and practice
