*Handbook of Economic Psychology* W.F. Van Raaij, G.M. van Veldhoven, K.E. Wärneryd, 2013-03-09 The idea to publish a Handbook of Economic Psychology came up as a natural consequence of a discussion concerning appropriate reading material for courses in economic psychology The discussion took place a few years ago in the Department of Economic Psychology at Tilburg University The Netherlands It was noted that there was a surprising lack of collections of pertinent readings to say nothing about the lack of textbooks in the English language So the present editors who had been involved in the discussion decided to start working on a Handbook The situation has changed quite a lot since then There are now a number of books internationally available in the English language in economic psychology or behavioral economics The interest in this field of study is expanding quite impressively The Journal of Economic Psychology is now 1988 in its ninth volume and many other journals are publishing articles in the field The application of psychological theories and methods to economic problems or the study of economic experiences and behavior is variously referred to as economic psychology or behavioral economics While in principle we do not want to overdo the differences between the two we have a feeling that economic psychology has a slightly stronger flavor of psychology than behavioral economics which in its turn seems to be closer to economics Psychologists tend to feel more at home in economic psychology while economists seem to favor behavioral economics

The last ten years have seen an enormous surge of interest in issues that are common to psychology and economics. How do people make decisions about economic issues? How should they make such decisions? Does public policy or regulation succeed in its aim of helping people make these decisions? What situations aid cooperation? This volume explores some of the ways in which economists and psychologists have tried to answer these questions. The authors are an international mix of economists and psychologists and as such they demonstrate a diverse range of approaches to tackling different aspects of these issues. This is a frontier area for both psychology and economics and consequently it is relatively free, lawless and above all exciting. This collection reflects the diversity and energy that characterise this rapidly growing interdisciplinary field. The
