processing circuits is also derived This methodology is used to analyze and design the constituting circuits of the radar transceiver In order to validate the design methodology a CMOS prototype is designed and experimentally evaluated

*Generalized Low-Voltage Circuit Techniques for Very High-Speed Time-Interleaved Analog-to-Digital Converters*

Sai-Weng Sin, Seng-Pan U, Rui Paulo Martins, 2010-09-29 Analog to Digital Converters ADCs play an important role in most modern signal processing and wireless communication systems where extensive signal manipulation is necessary to be performed by complicated digital signal processing DSP circuitry This trend also creates the possibility of fabricating all functional blocks of a system in a single chip System On Chip SoC with great reductions in cost chip area and power consumption However this tendency places an increasing challenge in terms of speed resolution power consumption and noise performance in the design of the front end ADC which is usually the bottleneck of the whole system especially under the unavoidable low supply voltage imposed by technology scaling as well as the requirement of battery operated portable devices Generalized Low Voltage Circuit Techniques for Very High Speed Time Interleaved Analog to Digital Converters will present new techniques tailored for low voltage and high speed Switched Capacitor SC ADC with various design specific considerations
