Transformations of Electricity in Nineteenth-Century Literature and Science Stella Pratt-Smith, 2017-05-15 Throughout the nineteenth century practitioners of science writers of fiction and journalists wrote about electricity in ways that defied epistemological and disciplinary boundaries Revealing electricity as a site for intense and imaginative Victorian speculation Stella Pratt Smith traces the synthesis of nineteenth century electricity made possible by the powerful combination of science literature and the popular imagination With electricity resisting clear description even by those such as Michael Faraday and James Clerk Maxwell who knew it best Pratt Smith argues that electricity was both metaphorically suggestive and open to imaginative

speculation Her book engages with Victorian scientific texts popular and specialist periodicals and the work of leading midcentury novelists including Charles Dickens Charlotte Bronte Emily Bronte William Makepeace Thackeray and Wilkie Collins Examining the work of William Harrison Ainsworth and Edward Bulwer Lytton Pratt Smith explores how Victorian novelists attributed magical qualities to electricity imbuing it with both the romance of the past and the thrill of the future She concludes with a case study of Benjamin Lumley s Another World which presents an enticing fantasy of electricity s potential based on contemporary developments Ultimately her book contends that writing and reading about electricity appropriated and expanded its imaginative scope transformed its factual origins and applications and contravened the bounds of literary genres and disciplinary constraints

Otte, 2012-12-06 I Some Characteristic Features of the Passage From the 18th to the 19th Century 1 The following notes grew out of reflections which first led us to send out invitations to and call for papers for an interdisciplinary workshop which took place in Bielefeld from 27th to 30th November 1979 The status and character of this preface is therefore somewhat ambiguous on the one hand it does not comment extensively on the articles to follow on the other hand it could not have been conceived and written in the way it was without knowledge of all the contributions to this volum which contains revised editions of papers for the workshop nor without the cooperation of the participants in the above mentioned symposium Furthermore although the following may sound slightly programmatic and summary we hope that it will be sufficiently explicit to provide some key words and concepts useful for further scholarly work Perhaps the most important result of our efforts is the very structure of these notes it is aimed at providing methodological orientations for the investigation of what turned out to be a very peculiar period in the history of science xi H N Jahnke and M Otte eds *Epistemological and Social Problems of the Sciences in the Early Nineteenth Century* xi xlii Copyright 1981 by D Reidel Publishing Company xii H N JAHNKE ET AL Annual Report of the National Science Foundation National Science Foundation (U.S.), *Catalogue of the University of Michigan* University of Michigan, 1967 Announcements for the following year included in some vols *Electric Arc Lighting* Edwin James Houston, Arthur Edwin Kennelly, 1896
