Hadi Dowlatabadi, Michael A. Toman, 2016-03-22 Environmental constraints and market uncertainties create new challenges for electricity generation In this title originally published in 1991 the authors present a simulation model with a capability for highly detailed activity to identify cost minimising investment options under different assumptions about demand costs regulation and other economic and environmental factors Applying the model to two U S regions having sharply different electricity demand and supply characteristics they identify the importance of advanced technologies and augmented electricity trade among regions This title is ideal for students interested in environmental studies

The Political Economy of Electricity Mark Cooper, 2017-04-24 Providing critical insights that will interest readers ranging from economists to environmentalists policymakers and politicians this book analyzes the economics and technology trends involved in the dilemma of decarbonization and addresses why aggressive policy is required in a capitalist political economy to create a sea change away from fossil fuels The environmental damage across the globe is a result of the success of capitalist industrialism 250 years of carbon pollution resulting from consumption of fossil fuels to drive the economy and the worldwide aspiration to ever increasing levels of economic development But capitalism has also produced the tools to solve the problems it has created in the form of a technological revolution in low carbon renewables distributed resources and intelligent systems to integrate supply and demand This book comprehensively examines the political economy of electricity and analyzes the challenge of transforming today s electricity sector to meet the dual goals of decarbonization and development expressed in the Paris Agreement Author Mark Cooper defines the dilemma of development and decarbonization as the great challenge facing the electricity industry and documents how the economic resources costs of a 100 percent renewable portfolio has

declined to the point that decarbonization can pay for itself making the low carbon renewable technologies that enable desired environmental and public health benefits an easy sell He identifies the substantial benefit of increasing use of information communications and advanced control technologies shows how targeted innovation could speed the transition by a decade or two and lower the overall cost of the transition by as much as half and explains why the flexible multi stakeholder approach of the Paris Agreement is the correct approach Hybrid Technologies for Power Generation Massimiliano Lo Faro,Orazio Barbera,Giosue Giacoppo,2021-10-30 Hybrid Technologies for Power Generation addresses the topics related to hybrid technologies by coupling conventional thermal engines with novel technologies including fuel cells batteries thermal storage and electrolysis and reporting on the most recent advances concerning transport and stationary applications Potential operating schemes of hybrid power generation systems are covered highlighting possible combinations of technology and guideline selection according to the energy demands of end users Going beyond state of the art technological developments for processes devices and systems this book discusses the environmental impact and existing hurdles of moving from a single device to new approaches for efficient energy generation transfer conversion high density storage and consumption By describing the practical viability of novel devices coupled to conventional thermal devices this book has a decisive impact in energy system research supporting those in the energy research and engineering communities Covers detailed thermodynamic requirements for multiple smart technologies included in hybrid systems i e FC electrolysers supercapacitors batteries thermal storage etc Features fundamental analysis and modeling to optimize the combination of smart technologies with traditional engines Details protocols for the analysis operation and requirements of large scale production Energy Abstracts for Policy Analysis ,1988 **Renewable Electricity - Generation Technologies** Great Britain: Parliament: House of Commons: Innovation, Universities, Science and Skills Committee,2008 The European Union s EU common Energy Policy commits the EU to generating 20 per cent of total energy consumption from renewables by 2020 The European Commission proposed national renewable energy targets for each Member State and it was suggested that 15 per cent of UK energy be derived from renewables by 2020 *Wind Energy in the 21st Century* R. Managing Climate Risk in the Global Economic System in the Post-COVID-19 Era Qiang Ji, 2023-06-02

Modeling the Economics of Greenhouse Gas Mitigation National Research Council, Division on Engineering and Physical Sciences, 2011-02-24

Models are fundamental for estimating the possible costs and effectiveness of different policies for reducing greenhouse gas GHG emissions. There is a wide array of models to perform such analysis, differing in the level of technological detail, treatment of technological progress, spatial and sector details, and representation of the interaction of the energy sector to the overall economy and environment. These differences impact model results, including cost estimates. More fundamentally, these models differ as to how they represent fundamental processes that have a large impact on policy analysis, such as how different models represent technological learning and cost reductions that come through increasing production volumes, or how different models represent baseline conditions. Reliable estimates of the costs and potential impacts on the United States economy of various emissions reduction and other mitigation strategies are critical to the development of the federal climate change research and development portfolio. At the request of the U.S. Department of Energy (DOE), the National Academies organized a workshop summarized in this volume to consider some of these types of modeling issues.
