Signal Processing for Telecommunications and Multimedia Tadeusz A. Wysocki,Bahram Honary,Beata J. Wysocki,2005-12-28 The unprecedented growth in the range of multimedia services offered these days by modern telecommunication systems has been made possible only because of the advancements in signal processing technologies and algorithms In the area of telecommunications application of signal processing allows for new generations of systems to achieve performance close to theoretical limits while in the area of multimedia signal processing the underlying technology making possible realization of such applications that not so long ago were considered just a science fiction or were not even dreamed about We all learnt to adopt those achievements very quickly but often the research enabling their introduction takes many years and a lot of efforts This book presents a group of invited contributions some of which have been based on the papers presented at the International Symposium on DSP for Communication Systems held in Coolangatta on the Gold Coast Australia in December 2003 Part 1 of the book deals with applications of signal processing to transform what we hear or see to the form that is most suitable for transmission or storage for a future retrieval The first three chapters in this part are devoted to processing of speech and other audio signals The next two chapters consider image coding and compression while the last chapter of this part describes classification of video sequences in the MPEG domain     **International Telecommunications Law [2009] - II** Dennis, Editor Campbell,2009-08-03 2009 Release International Telecommunications Law 2009 II a four volume set with more than 2 500 pages offers specialists from North and South America Europe Asia and the Pacific and the Middle East who examine their respective telecommunications legal and regulatory regimes Purchase
