Poenaru, 2018-05-04 This book has three volume The first volume is mainly devoted to the macroscopic microscopic theory in its traditional form and extended to very high mass and charge asymmetry Applications of this theory to the

emission of different kinds of charged particles from nuclei are presented in the second volume where recent experimental achievements in alpha decay proton and heavy ion ^{14}C ^{24}Ne ^{28}Mg etc radioactivities are also discussed Experiments on spontaneous fission fission isomers and more complex phenomena like particle accompanied fission delayed processes p a 2p t n 2n 3n and the new mechanism of cold fission or fission with compact shapes are described in detail in the third volume
