Autobiographical Memory Charles P. Thompson, Douglas J. Herrmann, Darryl Bruce, J. Don Read, David G.

Payne, 2014-10-10 The organization of the first Society for Applied Research in Memory and Cognition SARMAC conference centered around two specifically identifiable research topics autobiographical memory and eyewitness memory These two areas long time staples on the menu of investigators of memory in more natural settings differ on a variety of dimensions perhaps most notably in their specific goals for scientific inquiry and application For many questions about memory and cognition that are of interest to scientific psychology there have been historical as well as rather arbitrary reasons for their assignment to the autobiographical or eyewitness memory fields Perhaps as a result of differing historical orientations the first volume's seven autobiographical memory chapters focus upon the qualities or types of recall from research participants whereas the seven chapters in the eyewitness memory volume generally focus upon the quantity a concern for completeness and accuracy of recall This interest in the ultimate end product and its application within the legal process in general encourages eyewitness memory investigators to modify their testing procedures continually in an attempt to gain even more information from participants about an event Indeed several of the eyewitness memory chapters reflect such attempts Beyond the specific contributions of each chapter to the literature on autobiographical and eyewitness memory the editors hope that the reader will come away with some general observations the autobiographical and eyewitness memory fields are thriving these two fields are likely to remain center stage in the further investigation of memory in natural contexts although the autobiographical and eyewitness memory chapters have been segregated in these two volumes the separation is often more arbitrary than real and connections between the two areas abound the two research traditions are entirely mindful of fundamental laboratory methods research and theory sometimes drawing their research inspirations from that quarter and the two fields though driven largely by everyday memory concerns can contribute to a more basic understanding of memory at both an empirical and a theoretical level *Everyday Memory* John E. Harris, Peter Edwin Morris, 1984 Memory in the Real World Gillian Cohen, Martin A. Conway, 2007-12-03 This fully revised and updated third edition of the highly acclaimed *Memory in the Real World* includes recent research in all areas of everyday memory Distinguished researchers have

contributed new and updated material in their own areas of expertise The controversy about the value of naturalistic research as opposed to traditional laboratory methods is outlined and the two approaches are seen to have converged and become complementary rather than antagonistic The editors bring together studies on many different topics such as memory for plans and actions for names and faces for routes and maps life experiences and flashbulb memory and eyewitness memory Emphasis is also given to the role of memory in consciousness and metacognition New topics covered in this edition include life span development of memory collaborative remembering déjà vu and memory dysfunction in the real world Memory in the Real World will be of continuing appeal to students and researchers in the area Timing The Future: The Case For A Time-based Prospective Memory Joseph Glicksohn, Michael S Myslobodsky, 2006-06-12 In this volume leading researchers bring together current work on time perception and time based prospective memory in order to understand how people time their intentions This is the first account of many important topics concerning the timing of behavior offered by scientists of diverse fields who in the past have exhibited an attitude of mutual benign neglect An explication of the rules which govern timing the future are of fundamental interest to anyone who wishes to explore the potential of human experience Prospective memory especially time based is a relatively unexplored way to study memory and few studies have been devoted to its neurobiological foundations This volume aims to fill this void and will boost further interest in the field while stimulating interdisciplinary research
