Evolution of Insect Migration and Diapause Hugh Dingle,1978-04-11 This volume is an outgrowth of a Symposium entitled Evolution of Escape in Space and Time held at the XV International Congress of Entomology in Washington D C USA in August 1976 The choice of topic was prompted by recent advances in evolutionary ecology and the apparent suitability of insect migration and dia pause as appropriate material for evolutionary studies In the event that choice seems amply justified as I hope a perusal of these papers will show These Sympos ium papers hardly cover the topic of the evolution of escape mechanisms exhaustively and I am sure everyone will have his favorite lacuna Some of the more obvious ones are indicated by Professor Southwood in his Concluding Remarks at the end of the book The purpose of the Symposium however was not complete coverage but rather to indicate the potential inherent in insect migration and diapause for the study of evolutionary problems In that I think we have succeeded reasonably well These papers are expanded and in some cases somewhat altered versions of the papers delivered in Washington This has allowed greater coverage of the topics in question I suggested a format of a general overview of a topic emphasizing the author s own research con tributions In general the papers follow this outline although emphases vary Two of the authors Dr Rainey and Dr Lumme were unable to attend the Symposium Dr Rainey s paper was read by Mr Frank Walsh but Dr Cumulated Index Medicus ,1985 **Bibliography of Agriculture** ,1999 *Diapause and Life Cycle Strategies in Insects* Valerie K. Brown,Ivo Hodek,1983-03-31 **Insect Hormones** H. Frederik Nijhout,2021-02-09 Although insect endocrinology is one of the oldest and most active branches of insect physiology its classic general texts are long out of date while its abundant primary literature provides little biological context in which to make sense of the discipline as a whole In this book H Frederik Nijhout s goal is to provide a complete concise and up to date source for students and nonspecialists seeking an overview of the dynamic and wide ranging science that insect endocrinology has become since its beginnings nearly eighty years ago in the study of insect metamorphosis The author offers a comprehensive survey of the many roles that hormones play in the biology of insects Among the topics discussed are the control of molting metamorphosis reproduction caste determination in social insects diapause migration carbohydrate and lipid metabolism diuresis and behavior The account features a summary of the most current and accurate thinking on the complex roles of ecdysone and juvenile hormone in the control of metamorphosis a process still misunderstood and misrepresented in biological textbooks and many professional reviews Throughout the book s emphasis is on the biology of the organism and the ways in which physiological and developmental regulatory mechanisms are integrated into the insect s life cycle Diapause and Life Cycle Strategies in Insects Valerie K. Brown,Ivo Hodek,1983 *Current Trends of Insect Physiology and Population Dynamics: Modeling Insect Phenology, Demography, and Circadian Rhythms in Variable*

Environments Petros T. Damos, Sibylle C. Stoeckli, Alexandros Rigas, 2018-06-12 The current eBook collection includes substantial scientific work in describing how insect species are responding to abiotic factors and recent climatic trends on the basis of insect physiology and population dynamics The contributions can be broadly split into four chapters the first chapter focuses on the function of environmental and mostly temperature driven models to identify the seasonal emergence and population dynamics of insects including some important pests The second chapter provides additional examples on how such models can be used to simulate the effect of climate change on insect phenology and population dynamics The third chapter focuses on describing the effects of nutrition gene expression and phototaxis in relation to insect demography growth and development whilst the fourth chapter provides a short description on the functioning of circadian systems as well as on the evolutionary dynamics of circadian clocks
