*Earth, Our Living Planet* Philippe Bertrand, Louis Legendre, 2021-04-21 Earth is to our knowledge the only life bearing body in the Solar System This extraordinary characteristic dates back almost 4 billion years How to explain that Earth is teeming with organisms and that this has lasted for so long What makes Earth different from its sister planets Mars and Venus The habitability of a planet is its capacity to allow the emergence of organisms What astronomical and geological conditions concurred to make Earth habitable 4 billion years ago and how has it remained habitable since What have been the respective roles of non biological and biological characteristics in maintaining the habitability of Earth This unique book answers the above questions by considering the roles of organisms and ecosystems in the Earth System which is made of the non living and living components of the planet Organisms have progressively occupied all the habitats of the planet diversifying into countless life forms and developing enormous biomasses over the past 3.6 billion years In this way organisms and ecosystems took over the Earth System and thus became major agents in its regulation and global evolution There was co evolution of the different components of the Earth System leading to a number of feedback mechanisms that regulated long term Earth conditions For millennia and especially since the Industrial Revolution nearly 300 years ago humans have gradually transformed the Earth System Technological developments combined with the large increase in human population have led in recent decades to major changes in the Earth's climate soils biodiversity and quality of air and water After some successes in the 20th century at preventing internationally environmental disasters human societies are now facing major challenges arising from climate change Some of these challenges are short term and others concern the thousand year evolution of the Earth's climate Humans should become the stewards of Earth

**Earth** Jonathan I. Lunine, 1999 This is an outstanding overview of the history of the Earth from a unique planetary perspective for introductory courses in the earth sciences The book approaches Earth history as an evolution encompassing the origin of the cosmos through the inner working of living cells Earth Evolution of a Habitable Planet tells how the Earth has come to its present state why it differs from its neighboring planets what life's place is in Earth's history and how humanity affects the processes that make our planet livable Today's human influences are contemplated in the context of natural changes on Earth This book brings a fresh perspective to the study of the Earth for students who wish to learn how our planet evolved to its present form

Earth System Evolution and Early Life A.T. Brasier, D. McIlroy, N. McLoughlin, 2017-06-09 This volume in memory of Professor Martin Brasier which has many of his unfinished works summarizes recent progress in some of the hottest topics in palaeobiology including cellular preservation of early microbial life and early evolution of macroscopic animal life encompassing the Ediacara biota The papers focus on how to decipher evidence for early life which requires exceptional preservation employment of state of the art techniques and also an understanding gleaned from Phanerozoic lagerstätten and modern analogues The papers also apply Martin's MOFAOTYOF

principle my oldest fossils are older than your oldest fossils requiring an integrated approach to understanding fossils The adoption of the null hypothesis that all putative traces of life are abiotic until proven otherwise and the consideration of putative fossils within their spatial context characterized the work of Martin Brasier as is well demonstrated by the papers in this volume      Radioactivity and the Surface History of the Earth John Joly, 1924
