**British Book News** ,1989      Evolution ,      **Objections to Evolution** Nirushan Sivanesan,2023-05-11 The theory of evolution as proposed by Charles Darwin in 1859 has been plagued by controversy and criticisms since its inception But in the Western world at least the fight seems to be almost over with evolution being seen by many as a sealed deal The theory has made its way into science textbooks and has firmly lodged itself there Could this be the biggest mistake the scientific community has ever made **Objections to Evolution** addresses this question It reexamines the evidence for evolution and brings forth a new case against it from a nonreligious perspective This case contains completely unique and thought provoking ideas arguments and theories It asks and answers fundamental questions which have not been addressed previously and attempts to create a revolution in the way we think about our origins      *The Scientists* John

Gribbin,2019-07-30 A wonderfully readable account of scientific development over the past ve hundred years focusing on the lives and achievements of individual scientists by the bestselling author of *In Search of Schrödinger's Cat* In this ambitious new book John Gribbin tells the stories of the people who have made science and of the times in which they lived and worked He begins with Copernicus during the Renaissance when science replaced mysticism as a means of explaining the workings of the world and he continues through the centuries creating an unbroken genealogy of not only the greatest but also the more obscure names of Western science a dot to dot line linking amateur to genius and accidental discovery to brilliant deduction By focusing on the scientists themselves Gribbin has written an anecdotal narrative enlivened with stories of personal drama success and failure A bestselling science writer with an international reputation Gribbin is among the few authors who could even attempt a work of this magnitude Praised as a sequence of witty information packed tales and a terrific read by *The Times* upon its recent British publication *The Scientists* breathes new life into such venerable icons as Galileo Isaac Newton Albert Einstein and Linus Pauling as well as lesser lights whose stories have been undeservedly neglected Filled with pioneers visionaries eccentrics and madmen this is the history of science as it has never been told before      **The**

expanding influence of Europe His main attention is given to the movement of ideas in Egypt and Lebanon He shows how two streams of thought the one aiming to restate the social principles of Islam and the other to justify the separation of religion from politics flowed into each other to create the Egyptian and Arab nationalisms of the present century The last chapter of the book surveys the main tendencies of thought in the post war years Since its publication in 1962 this book has been regarded as a modern classic of interpretation It was reissued by the Cambridge University Press in 1983 and has subsequently sold over 8000 copies

**Species of Origins** Karl W. Giberson, Donald A. Yerxa, 2002-10-09 In *Species of Origins* Karl W. Giberson and Donald A. Yerxa examine America's controversial conversation about creation and evolution While noting that part of the discord stems from the growing cultural and religious diversity of the United States they argue powerfully that the real issue is the headlong confrontation between two seemingly incompatible worldviews upon which millions of Americans rely modern naturalistic science and traditional Judeo-Christian religions

threads across types of science skepticism to show why these controversial narratives stick and how we can more effectively counter them through storytelling Science v Story analyzes four scientific controversies climate change evolution vaccination and COVID 19 through the lens of storytelling Instead of viewing stories as adversaries to scientific practices Emma Frances Bloomfield demonstrates how storytelling is integral to science communication Drawing from narrative theory and rhetorical studies Science v Story examines scientific stories and rival stories including disingenuous rival stories that undermine scientific conclusions and productive rival stories that work to make science more inclusive Science v Story offers two tools to evaluate and build stories narrative webs and narrative constellations These visual mapping tools chart the features of a story i e characters action sequence scope storyteller and content to locate opportunities for audience engagement Bloomfield ultimately argues that we can strengthen science communication by incorporating storytelling in critical ways that are attentive to audience and context

*Alien Life and Human Purpose* Joseph Packer,2015-09-17 Alien Life and Human Purpose A Rhetorical Examination through History provides a rhetorical examination of the way major historical figures connect their arguments for the absence of alien life or unity to their philosophical religious and ethical agendas Although the unity myth has often existed in the background of society shaping institutions and values during periods where relativism gained prominence its opponents actively wielded the unity myth as a response Plato used the unity myth against the sophists Anglican theologian and philosopher William Whewell against the utilitarians co discoverer of evolution Alfred Russell Wallace against the social Darwinists university professors Frank J Tipler and John D Barrow against the postmodernists etc These individuals presented scientific defenses of unity and then used the fact of unity to claim the universe is teleological knowable and ordered rather than chaotic and relativistic This book argues that unity and its complimentary mythic function have played an important role in shaping

values throughout history and more importantly continue to do so today      Block by Block: The Historical and Theoretical Foundations of Thermodynamics Robert T. Hanlon, 2020-03-16 At the heart of many fields physics chemistry engineering lies thermodynamics While this science plays a critical role in determining the boundary between what is and is not possible in the natural world it occurs to many as an indecipherable black box thus making the subject a challenge to learn Two obstacles contribute to this situation the first being the disconnect between the fundamental theories and the underlying physics and the second being the confusing concepts and terminologies involved with the theories While one needn't confront either of these two obstacles to successfully use thermodynamics to solve real problems overcoming both provides access to a greater intuitive sense of the problems and more confidence more strength and more creativity in solving them This book offers an original perspective on thermodynamic science and history based on the three approaches of a practicing engineer academician and historian The book synthesises and gathers into one accessible volume a strategic range of foundational topics involving the atomic theory energy entropy and the laws of thermodynamics      **Literature Suppressed on Religious Grounds** Margaret Bald, 2014-05-14 Literature Suppressed on Religious Grounds Revised Edition profiles the censorship of many such essential works of literature The entries new to this edition include extensive coverage of the Harry Potter series which has been frequently banned in the United States on the grounds that it promotes witchcraft as well as entries on two popular textbook series The Witches by Roald Dahl Women Without Men A Novel of Modern Iran and more Also included are updates to such entries as The Satanic Verses by Salman Rushdie and On the Origin of Species by Charles Darwin
