**Straight Science? Homosexuality, Evolution and Adaptation** Jim McKnight, 2003-09-02 A genetic basis for homosexuality has been all but proved yet Darwinism the most widely accepted evolutionary theory emphasises successful reproduction How do we explain a lifetime

preference for non reproductive sex Whilst social constructionism offers explanations in terms of social learning and cultural preferences the body of evidence for a genetic predisposition to homosexuality grows Social learning argues that homosexual sex is merely misdirected and therefore futile but far from dying out it continues through the ages and is found in different cultures What if there was an evolutionary advantage to homosexuality Straight Science Homosexuality Evolution and Adaptation dares to ask such questions *Pathways to the Origin and Evolution of Meanings in the Universe* Alexei A. Sharov, George E. Mikhailovsky, 2024-03-26 *Pathways to the Origin and Evolution of Meanings in the Universe* The book explains why meaning is a part of the universe populated by life and how organisms generate meanings and then use them for creative transformation of the environment and themselves This book focuses on interdisciplinary research at the intersection of biology semiotics philosophy ethology information theory and the theory of evolution Such a broad approach provides a rich context for the study of organisms and other semiotic agents in their environments This methodology can be applied to robotics and artificial intelligence for developing robust adaptable learning devices In this book leading interdisciplinary scholars reveal their vision on how to integrate natural sciences with semiotics a theory of meaning making and signification Developments in biology indicate that the capacity to create and understand signs is not limited to humans or vertebrate animals but exists in all living organisms the fact that inspired the integration of biology and semiotics into biosemiotics The authors discuss the nature of semiotic agents organisms and other autonomous goal directed units meaning signs information memory evolution and consciousness Also discussed are issues including the origin of life potential meaning and its actualization top down causality in physics and biology capacity of organisms to encode their functions the strategy of organisms to combine homeostasis with direct adaptation to new life cycle phases or new environments multi level memory systems increase of freedom via enabling constraints creative modeling in evolution and learning communication in animals and humans the origin and function of language and the distribution and transfer of life in space This is the first book on biosemiotics in its global conceptual and spatial scope Biosemiotics is presented using the language of natural sciences which supports the scientific grounding of semiotic terms Finally the cosmic dimension of life and meaning making leads to a reconsideration of ethical principles and ecological mentality here on earth and in space exploration Audience Theoretical biologists ethologists astrobiologists ecologists evolutionary biologists philosophers phenomenologists semioticians biosemioticians molecular biologists linguists system scientists and engineers **The New Evolutionary Paradigm** Ervin Laszlo, 2019-07-18 Originally published in 1991 The New Evolutionary Paradigm provides an innovative and cross disciplinary look at evolution While Darwin s theory of evolution was originally restricted to the life sciences in recent years the same principles have been applied successfully to historical social and natural sciences The papers included in The New Evolutionary Paradigm analyse the facts observations and accumulated data from the significance of a general evolution theory cannot be overemphasised a new understanding of the cosmos and man s

relationship to it could lead to the systemization of the irreversible change that takes place in society and nature This book will appeal to scientists sociologists and those interested in transdisciplinary evolution theories Cycles of Contingency Susan Oyama, Russell D. Gray, Paul E. Griffiths, 2003-01-24 The nature nurture debate is not dead Dichotomous views of development still underlie many fundamental debates in the biological and social sciences Developmental systems theory DST offers a new conceptual framework with which to resolve such debates DST views ontogeny as contingent cycles of interaction among a varied set of developmental resources no one of which controls the process These factors include DNA cellular and organismic structure and social and ecological interactions DST has excited interest from a wide range of researchers from molecular biologists to anthropologists because of its ability to integrate evolutionary theory and other disciplines without falling into traditional oppositions The book provides historical background to DST recent theoretical findings on the mechanisms of heredity applications of the DST framework to behavioral development implications of DST for the philosophy of biology and critical reactions to DST *From Darwinian Metaphysics Towards Understanding the Evolution of Evolutionary Mechanisms* Momme von Sydow, 2012 Although Charles Darwin predicted that his theory would give zest to metaphysics even he would be astonished at the variety of paths his theory has in fact taken This holds with regard to both gene Darwinism a purified Darwinian approach biologizing the social sciences and process Darwinism found in the disciplines of psychology philosophy of science and economics Although Darwinism is often linked to highly confirmed biological theories some of its interpretations seem to profit from tautological claims as well where scientific reputation cloaks ideological usage This book discusses central tenets of Darwinism historically as well as systematically for example the history of different Darwinian paradigms the units of selection debate and the philosophical problem of induction as basis of metaphysical Darwinism Crucially the book addresses the Darwinian claim that evolution is governed by an immutable and unrelentingly cruel law of natural selection Paradoxically Darwins theory is a static non evolutionary theory of evolution The current book sketches the historical background and provides suggestions that may help to replace this approach by the idea of an evolution of evolutionary mechanisms see Escher s Drawing Hands on the cover This view even suggests a tendency to overcome the blindness of the knowledge acquisition of primordial Darwinian processes and allows for some freedom from external environments This book first develops a radically Darwinian approach then criticises this approach from within Even Darwinism has a tendency to transcend itself Although the book addresses several empirical issues it does not challenge particular findings Instead it builds on many insights of Darwinism and provides a proposal for interpreting known empirical evidence in a different light It should help pave the way for further developing an understanding of nature that transcends Darwinian metaphysics Publisher s description Alternative Life-History Styles of Animals Michael N. **Controversy Catastrophism and Evolution** Trevor Palmer, 2012-12-06 In *Controversy* Trevor Palmer fully documents how traditional gradualistic views of biological and geographic evolution are giving way to a catastrophism that credits

cataclysmic events such as meteorite impacts for the rapid bursts and abrupt transitions observed in the fossil record According to the catastrophists new species do not evolve gradually they proliferate following sudden mass extinctions Placing this major change of perspective within the context of a range of ancient debates Palmer discusses such topics as the history of the solar system present day extraterrestrial threats to earth hominid evolution and the fossil record **Current Catalog** National Library of Medicine (U.S.),1993 First multi year cumulation covers six years 1965 70 **National Library of Medicine Current Catalog** National Library of Medicine (U.S.),1984 **Evolution** Monroe W. Strickberger,1996 Strickberger s *Evolution* Second Edition provides a sweeping introduction that covers the chronology and mechanisms of evolution Various chapters are devoted to topics that include the historical development of evolutionary thought cosmological and geological events evolution of genetic systems and molecular pathways and accounts of organisms from plants to humans In studying the history of life students will begin to recognize the interrelatedness of many scientific fields **Bringing Fossils to Life** Donald R. Prothero,2013-11-12 The leading textbook in its field this work applies paleobiological principles to the fossil record while detailing the evolutionary history of major plant and animal phyla It incorporates current research from biology ecology and population genetics Written for biology and geology undergrads the text bridges the gap between purely theoretical paleobiology and solely descriptive invertebrate paleobiology books emphasizing the cataloguing of live organisms over dead objects This third edition revises art and research throughout expands the coverage of invertebrates includes a discussion of new methodologies and adds a chapter on the origin and early evolution of life *World Religions and Cults Volume 3* Bodie Hodge,Roger Patterson,2016-11-30 This final book in the series focuses on the atheistic or humanistic type of religions It would be one of the most valuable for the church in the Western World where anti god and pro evolution religions are beginning to explode for it was written to refute those religions and show how they fail Unlike most books on world religions this title dives into the secular humanistic religions The book starts with God s Word as the absolute authority In doing so God becomes our guide to refute false religions Humanistic religions are all around us and we need to be able to spot their tenets and oppose them instead of allowing them to subtly infiltrate our Christianity and undermine us from within We need to know how to refute these humanistic religions We need to know how to effectively present the gospel to people who have been deceived by humanistic religions *Molecules and Morphology in Evolution* Colin Patterson,1987-07-09 Papers presented at the Third International Congress of Systematic and Evolutionary Biology held at the University of Sussex 4 11 July 1985 **Natural Images in Economic Thought** Philip Mirowski,1994-07-29 This 1994 book was the first collection devoted to impact of natural sciences on content and form of economics in history Molecular Biology of the Cell Bruce Alberts,Dennis Bray,John Howard Wilson (biochemist),Hunt,Julian Lewis,Martin Raff,Keith Roberts,James D.
