Living with Darwin : Evolution, Design, and the Future of Faith Philip Kitcher Professor of Philosophy Columbia University, 2007-01-05 Charles Darwin has been at the center of white hot public debate for more than a century In Living With Darwin Philip Kitcher peers into the flames swirling around Darwin s theory sifting through the scientific evidence for evolution Creation Science and Intelligent Design and revealing why evolution has been the object of such vehement attack Kitcher ranges back in time to provide valuable perspective on the present controversy describing the many puzzling issues that blocked evolution s acceptance in the early years and explaining how scientific research eventually found the answers to these conundrums Interestingly Kitcher shows that many of these early questions have been resurrected in recent years by proponents of Intelligent Design In fact Darwin himself considered the issue of intelligent design and amassed a mountain of evidence that effectively refuted the idea Kitcher argues that the problem with Intelligent Design isn t that it s not science as many critics say but that it s dead science raising questions long resolved by scientists But after providing a convincing case for evolution Kitcher points out that it is also important to recognize the cost of Darwin s success the price of living with Darwin Darwinism has a profound effect on our understanding of ourselves and our place in the universe on our religious beliefs and aspirations It is in truth the focal point of a larger clash between religious faith and the discoveries of modern science Unless we can resolve this larger issue the war over evolution will go on Evolution is a dangerous idea In this balanced and sympathetic volume Philip Kitcher illuminates this idea while suggesting ways to defuse the danger suggestions that embrace both the religious impulse and the force of scientific evidence

Design Rules, Volume 1 Carliss Y. Baldwin, Kim B. Clark, 2000-03-02 We live in a dynamic economic and commercial world surrounded by objects of remarkable complexity and power In many industries changes in products and technologies have brought with them new kinds of firms and forms of organization We are discovering new ways of structuring work of bringing buyers and sellers together and of creating and using market information Although our fast moving economy often seems to be outside of our influence or control human beings create the things that create the market forces Devices software programs production processes contracts firms and markets are all the fruit of purposeful action they are designed Using the computer industry as an example Carliss Y Baldwin and Kim B Clark develop a powerful theory of design and industrial evolution They argue that the industry has experienced previously unimaginable levels of innovation and growth because it embraced the concept of modularity building complex products from smaller subsystems that can be designed independently yet function together as a whole Modularity freed designers to experiment with different approaches as long as they obeyed the established design rules Drawing upon the literatures of industrial organization real options and computer architecture the authors provide insight into the forces of change that drive today's economy
