In this volume, an example of a practical production process based on the software production process is explained, including examples of the game design, technical design, data design and tools design in that process. This volume includes a brief overview on how to optimise the results. This leads on to an exploration of how staff, especially Software Engineers, typically view optimisation. It also explains how the vision of the Engineers relates to the vision of the leadership of a project or company. It describes how this leadership can also affect the efficacy of a production process, including the Event-Database Production Process. This book will be of great interest to professional game developers involved in management roles such as Technical Directors and Game Producers and technical roles such as Tools Programmers, UI Programmers, Gameplay Programmers and Engineers, as well as students studying game development and programming.
