Evolutionary Dynamics Of Complex Systems A Study In Biosocial Complexity:

The Evolutionary Dynamics of Complex Systems Charles Dyke, 1988 Dyke examines the controversial topics of sociobiology and evolution from scientific and philosophical perspectives At issue are the basic underpinnings of biology explanation determination teleology reductionism and hierarchy The author proposes that progress in sociobiology and evolution is hindered by an outmoded philosophical view of science that does not adequately take into account recent advances in our understanding of basic biological processes His goal is to shift the focus from a philosophical understanding based on observation from outside biology to a dynamic philosophically aware science *The Evolutionary Dynamics of Complex Systems* Charles Dyke, 1988 Dyke examines the controversial topics of sociobiology and evolution from scientific and philosophical perspectives At issue are the basic underpinnings of biology explanation determination teleology reductionism and hierarchy The author proposes that progress in sociobiology and evolution is hindered by an outmoded philosophical view of science that does not adequately take into account recent advances in our understanding of basic biological processes His goal is to shift the focus from a philosophical understanding based on observation from outside biology to a dynamic philosophically aware science

Navigating Complexity in Big History David J. LePoire, Leonid Grinin, Andrey Korotayev, 2025-05-08 This book explores periodization in Big History against the background of complexity growth across the Universe on our planet and in biological social and cultural systems It traces the accelerating rise in complexity throughout history and the major historical transformations involved in the evolution of life humans and civilization It draws on concepts from physics and evolutionary biology to offer potential models of the underlying mechanisms driving this acceleration along with potential clues to how it might end In the editors introduction Chapter 1 the effort to periodize is placed within the historical context along with considerations from complexity science Subsequent chapters explore various aspects of periodization and complexity by a identifying symmetrical cosmic and biosocial trends b testing rigor and criteria for evaluating periodization c attempting to integrate different approaches through multiple perspectives d proposing different strategies for determining geometric patterns in terrestrial bio social evolution and e applying the traditional threshold model to gain insights into possible future pathways A concluding chapter identifies commonalities research gaps and possible approaches to integration as the current state of the world system rapidly evolves while also offering a deeper understanding of complexity dynamics and historical processes Each chapter includes an extensive bibliography allowing a deeper and more detailed examination of the issues covered

Critical Complexity Rika Preiser, 2016-01-15 This book is a collection of all the single authored essays by Paul Cilliers published between 1990 2011 Being one of few authors who approached the study of complexity from a philosophical perspective the main themes in these papers explore Qualitative characterization of complexity and the normative implications of studying complex adaptive systems the philosophical and conceptual similarity to post structural approaches how any engagement with complexity leads to a critical engagement with

how we do science and design interventions critical and normative implications for how to engage with complex socio political concerns in the world What makes this book unique is that it consolidates a body of work that is distributed over a wide range of academic journals Although his book *Complexity and Postmodernism* Routledge 1998 remains a cornerstone in the field of complexity studies Cilliers journal essays really explore the application of the theoretical concepts in more depth His ground breaking ideas conceptualized in these essays have served as a continual source of novelty and inspiration in the process of applying complexity thinking to other fields of study

Re-Engineering Philosophy for Limited Beings

William C. Wimsatt, 2007-06-30 Analytic philosophers once pantomimed physics trying to understand the world by breaking it down Thinkers from the Darwinian sciences now pose alternatives to such reductionism Wimsatt argues that today s scientists seek to atomize phenomena only to understand how entities events and processes articulate at different levels

Second Nature Urban Agriculture André Viljoen, Katrin Bohn, 2014-07-25 Winner of the 2015 RIBA President s Award for Outstanding University Located Research This book is the long awaited sequel to *Continuous Productive Urban Landscapes Designing Urban Agriculture for Sustainable Cities* Second Nature Urban Agriculture updates and extends the authors concept for introducing productive urban landscapes including urban agriculture into cities as essential elements of sustainable urban infrastructure It reviews recent research and projects on the subject and presents concrete actions aimed at making urban agriculture happen As pioneering thinkers in this area the authors bring a unique overview to contemporary developments and have the experience to judge opportunities and challenges facing those who wish to create more equitable resilient desirable and beautiful cities

Living with Nature Frank Fischer, Maarten A. Hajer, 1999 This text aims to place the question of the dynamics of environmental crisis in a socio cultural dimension of the existing economic and political institutions It argues for a need to find a balance between theoretical analysis of the debate and an appreciation of local circumstances and knowledge

Laws And Explanation In The Social Sciences Lee C McIntyre, 2018-10-08 The first full length defense of social scientific laws to appear in the last twenty years this book upholds the prospect of the nomological explanation of human behavior against those who maintain that this approach is impossible impractical or irrelevant By pursuing an analogy with the natural sciences McIntyre shows that the barriers to nomological inquiry within the social sciences are not generated by factors unique to social inquiry but arise from a largely common set of problems that face any scientific endeavor All of the most widely supported arguments against social scientific laws have failed largely due to adherence to a highly idealized conception of nomologicality allegedly drawn from the natural sciences themselves and the limited doctrine of descriptivism Basing his arguments upon a more realistic view of scientific theorizing that emphasizes the pivotal role of redescription in aiding the search for scientific laws McIntyre is optimistic about attaining useful law like explanations of human behavior

Semiotics Unbounded Susan

Petrilli, Augusto Ponzio, 2005-01-01 The more human knowledge increases the more signs grow and with this expansion the more the boundaries of the science that studies signs also grows In *Semiotics Unbounded* Susan Petrilli and Augusto Ponzio explain the explosion of the sign network in the era of global communication and discuss the important theoretical responses offered by semiotics Providing a much needed introductory guide to the subject Petrilli and Ponzio explore the ever growing frontiers of semiotics through the thought of prominent sign scholars such as Charles Peirce Victoria Welby Mikhail Bakhtin Charles Morris and Thomas Sebeok In an era of global communication a global approach is necessary and what may seem to be the whole is only a part a view being at once globalizing and open Each and every sign is never self sufficient and closed but exists always in a relation of otherness This is true of the signs forming animals and human beings individuals and communities and involves the implication of all living beings in the life of all others *Semiotics Unbounded* offers a new and original survey of the science of signs evaluating it in relation to the problems of our time not only of a scientific order but also the problems concerning everyday social life

Co-operative Environmental Governance P. Glasbergen, 2012-12-06 New philosophies of environmental management are being put to the test in many countries New ideas are needed to replace or at least flank the old command and control approach which has lost its credibility One of the most interesting new avenues is co operative environmental management whereby public and private parties work together to tackle a problem It is interesting because it seems to be well suited to handling complex environmental problems This kind of management makes use of the policy instrument known as the Environmental Agreement That tool is geared to the development of sustainable procedures for working out solutions The Environmental Agreement provides scope to deal with some essential characteristics of current environmental problems Indeed one of the most vexing aspects of environmental problems is uncertainty both in the ecological sphere and with respect to the economic effects of intervention In short this instrument takes the unknown into account

Foucault and the Critique of Institutions John Caputo, Mark Yount, 2010-11-01

The Molecular Vision of Life Lily E. Kay, 1993 This fascinating study examines the rise of American molecular biology to disciplinary dominance focusing on the period between 1930 and the elucidation of DNA structure in the mid 1950s Research undertaken during this period with its focus on genetic structure and function endowed scientists with then unprecedented power over life By viewing the new biology as both a scientific and cultural enterprise Lily E Kay shows that the growth of molecular biology was a result of systematic efforts by key scientists and their sponsors to direct the development of biological research toward a shared vision of science and society She analyzes the motivations and mechanisms empowering this vision by focusing on two key institutions Caltech and its sponsor the Rockefeller Foundation Her study explores a number of vital sometimes controversial topics among them the role of private power centers in shaping scientific agenda and the political dimensions of pure research It also advances a sobering argument the cognitive and social groundwork for genetic engineering and human genome projects was laid by the American architects of molecular biology

during these early decades of the project This book will be of interest to molecular biologists historians sociologists and the general reader alike

Bridging Complexity and Post-Structuralism Minka Woermann, 2016-09-27 This work addresses the topic of philosophical complexity which shares certain assumptions with scientific complexity cybernetics and General Systems Theory but which is also developing as a subject field in its own right Specifically the post structural reading of philosophical complexity that was pioneered by Paul Cilliers is further developed in this study To this end the ideas of a number of contemporary French post structural theorists and their predecessors including Derrida Nancy Bataille Levinas Foucault Saussure Nietzsche Heidegger and Hegel are introduced The implications that their various insights hold for our understanding of complex human systems are teased out at the hand of the themes of economy social ontology subjectivity epistemology and ethics The analyses are also illuminated at the hand of the problematic of the foreigner and the related challenges of showing hospitality to foreigners The study presents a sophisticated account of both philosophical complexity and philosophies of difference By relating these subject fields the study also extends our understanding of philosophical complexity and offers an original characterisation of the aforementioned philosophers as complex thinkers

Multi-Scale Integrated Analysis of Agroecosystems Mario Giampietro, 2003-11-24 Ecologists agronomists and others who may question the validity of current models for determining sustainable growth of agroecosystems need a new set of analytical tools that more effectively address the complex nature of related processes Those who challenge traditional assumptions of optimization and static factors in agricultural modeling de

Hans Krebs: The formation of a scientific life, 1900-1933 Frederic Lawrence Holmes, 1991 The biography of one of the world's foremost biochemists which traces his scientific career and his discoveries of the urea cycle and the citric acid cycle The text makes use of five years of interviews with Hans Krebs and a complete set of Krebs key laboratory notebooks

The Wellborn Science Mark B. Adams, 1990-03-08 The four contributors to this volume examine the eugenics movements in Germany France Brazil and the Soviet Union and describe how geneticists and physicians participated in the development of policies concerning the improvement of hereditary qualities in humans They examine the scientific components of those programs and discuss the involvement of social religious and political forces that significantly altered the original scientific goals The book opens up new and comparative perspectives on the history of eugenics and the social uses of science in general
