Parliament. House of Commons, 1865      *Evolution of Sound* Alexander Wilford Hall, 1878      *Evolution* Christopher H. K. Persaud, 2007-12 Darwinian evolution is taught unreservedly to students of science around the world as incontrovertible truth even though many aspects of the theory have been thoroughly discredited while others are woefully lacking in corroboration from a standpoint of proper scientific precept and practice Practical and honest scientists increasingly are acknowledging that evolutionism is biologically and mathematically impossible The outlandish premise is at odds with the laws of physics and manifestly incompatible with genuine geological and paleontological criteria for aging and classifying rocks strata and fossils Evolutionary theory's ostracism of God as a supreme designer and creator of the universe and of life has emboldened many of history's most ruthless dictators who have embraced its disturbing message to commit crimes of unspeakable evil Many millions of people have lost their lives as demagogues fueled by evolutionist inclinations have sought to legitimize sinister proclivities such as racism bigotry eugenics and ethnic cleansing among other perpetrations of antipathy and wickedness It is not unreasonable to assume that many of today's social and behavioral thinkers as well as misguided scientists who support evolutionary theory also nurture predilections that are far removed from wholesome deportment and espouse leanings that show scant respect for the sanctity of human life Evolutionary thought falls outside the precincts of essential moral contemplation and is beyond the realm of real science      *The Problem of human life : embracing the "evolution of sound" and "evolution evolved," with a review of the six great modern scientists, Darwin, Huxley, Tyndall, Haeckel, Helmholtz, and Mayer* Alexander Wilford Hall, 1883      **Beyond Evolution** Anthony O'Hear, 1997-10-09 Anthony O

Hear takes a stand against the fashion for explaining human behaviour in terms of evolution. He maintains controversially that while the theory of evolution is successful in explaining the development of the natural world in general it is of limited value when applied to the human world. Because of our reflectiveness and our rationality we take on goals and ideals which cannot be justified in terms of survival promotion or reproductive advantage. O Hear examines the nature of human self consciousness and argues that evolutionary theory cannot give a satisfactory account of such distinctive facets of human life as the quest for knowledge, moral sense and the appreciation of beauty in these we transcend our biological origins. It is our rationality that allows each of us to go beyond not only our biological but also our cultural inheritance as the author says in the Preface we are prisoners neither of our genes nor of the ideas we encounter as we each make our personal and individual way through life. **Changing the Face of the Waters** World Bank, 2007-06-27. Aquaculture, the farming of fish and aquatic plants, has become the world's fastest growing food production sector even as the amount of wild fish caught in our seas and freshwaters declines. From fish foods and pharmaceuticals to management of entire aquatic ecosystems, aquaculture is truly changing the face of the waters. Increased growth, however, brings increased risk and aquaculture now lies at a crossroads. One direction points toward the giant strides in productivity, industry concentration and product diversification. Another direction points toward the dangers of environmental degradation and the marginalization of small fish farmers. Yet another direction invites aquaculture to champion the poor and provide vital environmental services to stressed aquatic environments. *Changing the Face of the Waters* offers a cutting edge analysis of the critical challenges facing aquaculture, balancing aquaculture's role in economic growth with the need for sound management of natural resources. The book also provides guidance on sustainable aquaculture by evaluating alternative development pathways, placing particular emphasis on the application of lessons from Asia to Sub-Saharan Africa and Latin America. Aimed at policy makers, planners and scientists, this book provides a comprehensive frame of reference for orienting ideas and initiatives in this dynamic industry.
