One: Steve William, 2025-09-11 Many people have heard that the universe began with a big bang Surprise big light is a better term Even so many assume this Big Bang Light means there is no God behind it Some scientists have been trying to prove as much for as long as we realized there was a Big Light but always God's Creative Moment is the most scientific empirical and data laden explanation

Modern Physics and Ancient Faith Stephen M. Barr, 2003-02-28 A considerable amount of public debate and media print has been devoted to the war between science and religion In his accessible and eminently readable new book Stephen M Barr demonstrates that what is really at war with religion is not science itself but a philosophy called scientific materialism Modern Physics and Ancient Faith argues that the great discoveries of modern physics are more compatible with the central teachings of Christianity and Judaism about God the cosmos and the human soul than with the atheistic viewpoint of scientific materialism Scientific materialism grew out of scientific discoveries made from the time of Copernicus up to the beginning of the twentieth century These discoveries led many thoughtful people to the conclusion that the universe has no cause or purpose that the human race is an accidental by product of blind material forces and that the ultimate reality is matter itself Barr contends that the revolutionary discoveries of the twentieth century run counter to this line of thought He uses five of these discoveries the Big Bang theory unified field theories anthropic coincidences Godel's Theorem in mathematics and quantum theory to cast serious doubt on the materialist's view of the world and to give greater credence to Judeo Christian claims about God and the universe Written in clear language Barr's rigorous and fair text explains modern physics to general readers without oversimplification Using the insights of modern physics he reveals that modern scientific discoveries and religious faith are deeply consonant Anyone with an interest in science and religion will find Modern Physics and Ancient Faith invaluable

Einstein Himself Anthony McAuliffe, A more critical look at the man known today by most as one of the greatest scientists of all time A unique and thought provoking narrative quite at odds with the generally accepted dogma How exactly did Einstein rise to become so revered today This is also the story of Mileva Maric a little known woman who just so happened to be Einstein's first wife When Einstein presented his famous Annus Mirabilis or Wonder Year papers in 1905 Mileva was of equal training in the fields of mathematics and physics and indeed more accomplished than Einstein in many other disciplines He seems more an intuitive physicist stated Chaim Weizmann a promoter of Einstein He is not an experimental physicist and though he is able to detect fallacies in the conceptions of physical science he must turn his general outlines of theory over to someone else to work out Historians report that Einstein collaborated with other scientists from 1907 In 1905 there was Mileva

human condition Not only can we not currently explain the origin of the universe it is questionable we will ever be able to explain it The notion that there are universes within particles or that particles are conscious is ascientific as is the hypothesis that our universe is a computer simulation On the other hand the idea that the universe itself is conscious is difficult to rule out entirely According to Sabine Hossenfelder it is not a coincidence that quantum entanglement and vacuum energy have become the go to explanations of alternative healers or that people believe their deceased grandmother is still alive because of quantum mechanics Science and religion have the same roots and they still tackle some of the same questions Where do we come from Where do we go to How much can we know The area of science that is closest to answering these questions is physics Over the last century physicists have learned a lot about which spiritual ideas are still compatible with the laws of nature Not always though have they stayed on the scientific side of the debate In this lively thought provoking book Hossenfelder takes on the biggest questions in physics Does the past still exist Do particles think Was the universe made for us Has physics ruled out free will Will we ever have a theory of everything She lays out how far physicists are on the way to answering these questions where the current limits are and what questions might well remain unanswerable forever Her book offers a no nonsense yet entertaining take on some of the toughest riddles in existence and will give the reader a solid grasp on what we know and what we don't know
