Adaptive Mechanisms in the Ecology of Vision S. Archer, M.B. Djamgoz, E.

Loew, J.C. Partridge, S. Vallergera, 2013-04-17 John Lythgoe was one of the pioneers of the Ecology of Vision a subject that he ably delineated in his classic and inspirational book published some 20 years ago 1 At heart the original book aimed generally to identify inter relationships between vision animal behaviour and the environment John Lythgoe excelled at identifying the interesting questions in the ecology of an animal that fitted the answers presented by an analysis of the visual system Over the last twenty years however since Lythgoe's landmark publication much progress has been made and the field has broadened considerably In particular our understanding of the adaptive mechanisms underlying the ecology of vision has reached considerable depths extending to the molecular dimension partly as a result of development and application of new techniques This complements the advances made in parallel in clinically oriented vision research 2 The current book endeavours to review the progress made in the ecology of vision field by bringing together many of the major researchers presently active in the expanded subject area The contents deal with theoretical and physical considerations of light and photoreception present examples of visual system structure and function and delve into aspects of visual behaviour and communication Throughout the book we have tried to emphasise one of the major themes to emerge within the ecology of vision the high degree of adaptability that visual mechanisms are capable of undergoing in response to diverse and dynamic environments and behaviours

Ecomorphology of fishes Joseph J. Luczkovich, Philip J. Motta, Stephen F. Norton, Karel F. Liem, 2013-04-17

Ecomorphology is the comparative study of the influence of morphology on ecological relationships and the evolutionary impact of ecological factors on morphology in different life intervals populations species communities and evolutionary lineages The book reviews early attempts at qualitative descriptions of ecomorphological patterns in fishes especially those of the Russian school More recent quantitative studies are emphasised including multivariate approaches to ecomorphological analysis the selection of functionally important ecological and morphological variables to analyze an experimental approach using performance tests to examine specific hypotheses derived from functional morphology and the evolutionary interpretations of ecomorphological patterns Six major areas of fish biology are focused on feeding sensory systems locomotion respiration reproduction and phylogenetic relationships The 18 papers in the volume document 1 how the morphology of bony fishes constrains ecological patterns and the use of resources 2 whether ecological constraints can narrow the niche beyond the limits imposed by morphology fundamental vs realized niche 3 how communities of fishes are organized with respect to ecomorphological patterns and 4 the degree to which evolutionary pressures have produced convergent or divergent morphologies in fishes A concluding paper summarizes ecomorphological research in fishes and points out taxa that are underrepresented or are especially promising for future research
