Feeling For The Organism:

A Feeling for the Organism Evelyn Fox Keller, Benoit B. Mandelbrot, 1984-02-15 McClintock Barbara **A Feeling for the Organism, 10th Anniversary Edition** Evelyn Fox Keller, 1984-02-15 For much of her life she worked alone brilliant but eccentric with ideas that made little sense to her colleagues Yet before DNA and the molecular revolution Barbara McClintock's tireless analysis of corn led her to uncover some of the deepest most intricate secrets of genetic organization Nearly forty years later her insights would bring her a MacArthur Foundation grant the Nobel Prize and long overdue recognition At her recent death at age 90 she was widely acknowledged as one of the most significant figures in 20th century science Evelyn Fox Keller's acclaimed biography *A Feeling for the Organism* gives us the full story of McClintock's pioneering although sometimes professionally difficult career in cytology and genetics The book now appears in a special edition marking the 10th anniversary of its original publication Controversies in Feminism James P. Sterba, 2001 Feminism was born in controversy and it continues to flourish in controversy The distinguished contributors to this volume provide an array of perspectives on issues including universal values justice and care a feminist philosophy of science and the relationship of biology to social theory **Interpretation And Explanation In The Study Of Animal Behavior** Ph.D. Bekoff, 2021-11-28 People have long been fascinated not just by the behaviour of non human animals but by the problem of how this behaviour is to be interpreted and explained This is one of two volumes of original essays on the cognitive and emotional dimensions of non human minds and the relationship of natural minds to behaviour The essays also address questions concerning the meaning and significance of consciousness animal intelligence awareness and emotions behavioural plasticity flexibility and constraints on understanding animal minds and the structure of explanation in the study of behaviour

The Feeling of what Happens Antonio R. Damasio, 1999 The publication of this book is an event in the making All over the world scientists psychologists and philosophers are waiting to read Antonio Damasio's new theory of the nature of consciousness and the construction of the self A renowned and revered scientist and clinician Damasio has spent decades following amnesiacs down hospital corridors waiting for comatose patients to awaken and devising ingenious research using PET scans to piece together the great puzzle of consciousness In his bestselling *Descartes Error* Damasio revealed the critical importance of emotion in the making of reason Building on this foundation he now shows how consciousness is created Consciousness is the feeling of what happens our mind noticing the body's reaction to the world and responding to that experience Without our bodies there can be no consciousness which is at heart a mechanism for survival that engages body emotion and mind in the glorious spiral of human life A hymn to the possibilities of human existence a magnificent work of ingenious science a gorgeously written book *The Feeling of What Happens* is already being hailed as a classic **The Shape of Wonder** Alan Lightman, Martin Rees, 2025-09-02 In this captivating insightful book acclaimed physicists Alan Lightman and Martin Rees illuminate the life and work of numerous scientists in order to demystify the scientific process and

show that scientists are concerned citizens just like the rest of us Remarkable Illuminating with refreshing clarity the ordinary and sometimes extraordinary work of scientists This book is essential reading Jennifer Ackerman bestselling author of *What an Owl Knows* In an age of rapid scientific discovery and technological advancement it is understandable that many feel uneasy about the future While we might have confidence in these new developments when we go to the hospital for a medical procedure fly in an airplane or take an elevator to the top floor of a building the motivations and lives of scientists themselves feel shrouded from public view There is a growing sense that scientists are not to be trusted that they may be guided by political or financial interests or beholden to governments or state institutions This growing mistrust of scientists is an urgent problem With the onset of climate change the imminent threats of pandemic or nuclear war and rapid acceleration in the fields of artificial intelligence and DNA sequencing innovations in science have the potential to change the world It is crucial that we not only gain a better understanding of science as a field but also reestablish trust with its practitioners *The Shape of Wonder* guides us through the fascinating lives and minds of scientists around the world and throughout time from a young theoretical physicist who works as a research assistant professor at the University of Washington and rock climbs in their free time to German physicist Werner Heisenberg in his early life when he was a student of music and philosophy to Govind Swarup an Indian astronomer whose work on radio telescopes was profoundly important We get an inside peek at what makes scientists tick their daily lives passions and concerns about the societies they live in In this brilliant and elucidative work Lightman and Rees pull back the curtain on the field of science revealing that scientists are driven by the same sense of curiosity wonder and responsibility towards the future that shapes us all

The Theory of Practice: Analytic. Analysis of feeling, action, and character Shadworth Hollway Hodgson, 1870 **Feeling as the Principle of Individuation and Socialization** Rudolph Michael Binder, 1903 Empirical Philosophy of Science Susann Wagenknecht, Nancy J. Nersessian, Hanne Andersen, 2015-06-12 The book examines the emerging approach of using qualitative methods such as interviews and field observations in the philosophy of science Qualitative methods are gaining popularity among philosophers of science as more and more scholars are resorting to empirical work in their study of scientific practices At the same time the results produced through empirical work are quite different from those gained through the kind of introspective conceptual analysis more typical of philosophy This volume explores the benefits and challenges of an empirical philosophy of science and addresses questions such as What do philosophers gain from empirical work How can empirical research help to develop philosophical concepts How do we integrate philosophical frameworks and empirical research What constraints do we accept when choosing an empirical approach What constraints does a pronounced theoretical focus impose on empirical work Nine experts discuss their thoughts and empirical results in the chapters of this book with the aim of providing readers with an answer to these questions

Molecular Feminisms Deboleena Roy, 2018-11-10 Should feminists clone What do neurons think about How can we learn from bacterial writing These

provocative questions have haunted neuroscientist and molecular biologist Deboleena Roy since her early days of research when she was conducting experiments on an in vitro cell line using molecular biology techniques An expert natural scientist as well as an intrepid feminist theorist Roy takes seriously the expressive capabilities of biological objects such as bacteria and other human nonhuman organic and inorganic actants in order to better understand processes of becoming She also suggests that renewed interest in matter and materiality in feminist theory must be accompanied by new feminist approaches that work with the everyday nitty gritty research methods and techniques in the natural sciences By practicing science as feminism at the lab bench Roy creates an interdisciplinary conversation between molecular biology Deleuzian philosophies science and technology studies feminist theory posthumanism and postcolonial and decolonial studies In *Molecular Feminisms* she brings insights from feminist and cultural theory together with lessons learned from the capabilities and techniques of bacteria subcloning and synthetic biology to offer tools for how we might approach nature anew In the process she demonstrates that learning how to see the world around us is also always about learning how to encounter that world

Analysis of feeling, action, and character** Shadworth Hollway Hodgson,1870 Love and Other Emotions Jason W. Brown,2018-03-08 This book is an account of the psychology of romantic love in the context of a theory of emotions The account develops out of studies in brain psychology and the extension to topics in process philosophy such as the nature of value and belief and the central role of feeling in mental process The approach is subjectivist that is from the internal standpoint and in this respect it differs greatly from the externalist and objectivist trends in modern cognitive science and empiricist philosophy Love is the ultimate in value so that a theory of love is also a theory of the nature of value and its relation to feeling belief and to drive and desire The role of intention reason and appraisal is critiqued The relation to other feelings such as jealousy envy anger loss and grief is discussed in terms of a general theory of emotion and the basis in a process account of the mind brain state **The Baptist Quarterly Review** John Ross Baumes,Robert Stuart MacArthur,Henry Clay Vedder,1881 *The Nervous System and the Mind* Charles Arthur Mercier,1888 Abū'l-Barakāt al-Baghdādī's Metaphysical Philosophy Moshe Pavlov,2017-04-21 Ab l
