On Spiders, Cyborgs, and Being Scared Joanna Zylińska, 2001 This book deals with the institutional framework in post socialist after empire spaces It consists of nine case studies and two contributions of a more theoretical nature Each of these analytical narratives sheds some light on the micro politics of organised violence After 1990 Serbs and Croats were competing over access to the resources needed for institution building and state building Fear in turn triggered ethnic mobilisation An unprofessional riot of Serbs in the Krajina region developed into a professional war between Serbs and Croats in Croatia in which several thousand died and several hundred thousand people were forcefully expelled from their homes The Herceg Bosnian style of resistance can be surprisingly effective It is known that most of the heroin transported along the Balkans route passes through the hands of Albanian mafia groups that this traffic has taken off since summer 1999 The concept of Staatnation is based on the doctrine according to which each nation must have its own territorial State and each State must consist of one nation only The slow decline and eventual collapse of the Soviet and the Yugoslav empires was partly triggered partly accompanied by the quest for national sovereignty Dagestan is

notable for its ethnic diversity and even by post Soviet standards its dramatic economic deprivation The integrative potential of cooperative movements at the republican the regional and the inter state level for the Caucasus is analyzed The book also offers insights into the economics of ending violence Finally it addresses the question of reconciliation after ethnic cleansing

Trading Psychology Collection LR Thomas,2024-06-01 If You Want to Be Successful in Trading You Need to Buy This Book In these four best selling trading psychology books you will find practical immediately usable strategies to improve the way you trade Control Your Inner Trader Self control is probably the most important skill you need to acquire as a trader Unfortunately most trading psychology books can be very vague and short on specific strategies to take control of your mental state while trading Trading psychology shares equal importance with money management and the trading system and yet most traders remain unaware of the importance of taking into account their trading psychology when designing a trading system What traders need is an unambiguous trader psychology system that can easily slot into whatever system they are trading and enable them to trade their system according to their trading plan Control Your Inner Trader draws on the experience of an eight year trading veteran who is also a qualified therapist Behavioral and therapeutic techniques are included in the book that is easy for anyone to follow Overcome Your Fear in Trading The most prevalent emotion facing traders is fear Fear causes traders to exit trades too early ruining their equity curve Fear causes traders to self sabotage so they can fulfill their self fulfilling prophecy of trading failure Fear causes traders to find reasons to avoid taking trades that would have been winners Fear causes traders to exit trades before they have a chance to get the move underway and then have the misery of seeing a profitable trade run away from them There are many more destructive aspects to fear in trading and what is vital for the trader in order for them to succeed is to have a way of thinking about trading that eliminates fear from the trading process How to Stop Over Trading is the latest book in the trading psychology series of books by L R Thomas This book zeroes in on the specific reasons traders take trades outside their trading plan and offers simple solutions to stop over trading forever The truth is that if a trader consistently trades outside their strategy even on a demo platform they are very unlikely to succeed in trading If you are skewing your trading results by taking trades that you shouldn't then this book could change your trading for the better forever Patience Lack of patience also causes negative behaviors related to trading such as not bothering to back test the system not keeping careful

records and not doing an end of day or end of week analysis of trading results to find areas of improvement The feeling of things not moving fast enough also causes traders to add too many trading systems to an already overloaded brain and not be able to focus properly on any one strategy to make it profitable The profitability of the trading system is profoundly impacted by these types of behaviors and turns what is a money making system in theory into a loss making system in the real life Buy the Trading Psychology Collection and Begin Improving Your Trading Today
