Female Control Sexual Selection By Cryptic Female Choice:

Female Control William G. Eberhard, 1996 Evidence from various fields indicates that such selectivity by females may be the norm rather than the exception Because most postcopulatory competition among males for paternity is played out within the bodies of females female behavior morphology and physiology probably often influence male success in these contests Eberhard draws examples from a diversity of organisms ranging from ctenophores to scorpions nematodes to frogs and crickets to humans

Male Choice, Female Competition, and Female Ornaments in Sexual Selection Ingo Schlupp, 2021-05-31 When Charles Darwin first proposed Sexual Selection Theory he suggested two mechanisms competition among males and choice by females Although their importance is long established and extremely well understood their mirror images have remained largely underappreciated males also choose and females also compete The combination of male mate choice MMC and female competition FC may be one of the most overlooked yet important and intriguing phenomena in modern sexual selection theory This novel text reviews our current understanding of MMC and FC highlighting the important connections between them It places both concepts in the context of related fields such as female choice mating systems and sexual selection theory more broadly A truly holistic approach is provided which takes all the relevant elements into consideration especially the relative roles of MMC and FC female ornamentation their evolutionary consequences and their genetic basis Considering male mate choice and female competition in this way as effectively two sides of the same coin creates a powerful paradigm for a more complete understanding of sexual selection Male Choice Female Competition and Female Ornaments in Sexual Selection will be suitable for both graduate students and researchers interested in sexual selection from an evolutionary psychological and anthropological perspective It will also appeal to a broader audience of behavioural ecologists and evolutionary psychologists

Sexual Selection in Primates Peter M. Kappeler, Carel P. van Schaik, 2004-05-13 Sexual Selection in Primates provides an account of all aspects of sexual selection in primates combining theoretical insights comprehensive reviews of the primate literature and comparative perspectives from relevant work on other mammals birds and humans Topics include sex roles sexual dimorphism in weapons ornaments and armaments sex ratios sex differences in behaviour and development mate choice sexual conflict sex specific life history strategies sperm competition and infanticide The outcome of the evolutionary struggle between the sexes the flexibility of roles and the leverage of females are discussed and emphasised throughout Sexual Selection in Primates is aimed at graduates and researchers in primatology animal behaviour evolutionary biology and comparative psychology

Sperm Competition and Sexual Selection Tim R. Birkhead, Anders Pape Møller, 1998-08-12 Sperm Competition and Sexual Selection presents the intricate ways in which sperm compete to fertilize eggs and how this has prompted reinterpretations of breeding behavior This book provides a theoretical framework for the study of sperm competition which is a central part of sexual selection It also discusses the roles of females and the relationships between paternal care in sperm competition The chapters focusing

on taxonomic development are diverse and cover all the major animal groups both vertebrate and invertebrate and plants. The final chapter provides an overview discussing the relationship between sperm competition and sexual selection in terms of both function and mechanism and how these translate into species fitness. This book will be of prime interest to behaviorists, ecologists, and evolutionary biologists, suggesting new avenues of research and new ways of approaching old problems. The only up-to-date summary of a central and popular subject. Well-known editors and authors. Provides a theoretical framework for the study of sperm competition. Covers all major animal groups. Includes a chapter on plants.

Reproductive Biology Martin Thiel, 2013 Rickey Cothran and Martin Thiel explore the reproductive biology of crustaceans from allocation strategies at the individual level to the ecology of mating systems. *Reproductive Biology* Rickey Cothran, Martin Thiel, 2020-06-18 Rickey Cothran and Martin Thiel explore the reproductive biology of crustaceans from allocation strategies at the individual level to the ecology of mating systems. **Nature's Nether Regions** Menno Schilthuizen, 2015-04-28 A tour of evolution's most inventive and essential creations: animal genitalia. Forget opposable thumbs and canine teeth: the largest anatomical differences between humans and chimps are found below the belt. In *Nature's Nether Regions*, ecologist and evolutionary biologist Menno Schilthuizen invites readers to discover the wondrous diversity of animalian reproductive organs. Schilthuizen packs this delightful read with astonishing scientific insights while maintaining an absorbing narrative style reminiscent of Mary Roach and Jerry Coyne. With illustrations throughout and vivid field anecdotes among them: laser surgery on a fruit fly's privates and a snail orgy. *Nature's Nether Regions* is a celebration of life in all shapes and sizes. Rules and Exceptions in Biology: from Fundamental Concepts to Applications Alfredo V. Peretti, Lucía S. Calbacho-Rosa, Paola A. Olivero, Mariela A. Oviedo-Diego, David E. Vrech, 2024-05-17 This is the first book to cover and explore the rules and exceptions in biology. It presents past and current perspectives on the subject and discusses the various situations of transition from rule to exception and vice versa. In doing so, the book fills a gap in the scientific literature and stimulates useful and valuable discussions among researchers working in biology worldwide. The chapters begin with a theoretical framework followed by the main topics or questions and a summary of previous work on the topic. Examples are discussed with concluding remarks and suggestions for future research. A section with key concepts is included at the end of each chapter, allowing the reader to jump directly to the most important findings or observations. Each chapter is written to be used as a reference by graduate students and professionals from a variety of scientific disciplines: e.g., behavior, ecology, evolution, and systematics. The Evolution of Primary Sexual Characters in Animals Janet Leonard, Alex Cordoba-Aguilar, 2010-07-19 This edited volume explores primary sexual characters in a wide variety of animal taxa. It provides an overview of sexual diversity, the selective pressures that have shaped it, and an introduction to the data and theoretical issues in sexual selection that are changing our view of sexual processes. **Insects as Natural Enemies** Mark A. Jervis, 2007-09-07 Over the past three decades, there has been a dramatic increase in theoretical and practical studies on

insect natural enemies This considerably updated and expanded version of a previous best seller is an account of major aspects of the biology of predators and parasitoids punctuated with information and advice on which experiments or observations to conduct and how to carry them out It emphasizes practicalities and also provides guidance on further literature **Insect Sounds and Communication** Sakis Drosopoulos, Michael F. Claridge, 2005-11-02 While we may have always assumed that insects employ auditory communication our understanding of it has been impeded by various technical challenges In comparison to the study of an insect's visual and olfactory expression research in the area of acoustic communication has lagged behind Filling this void **Insect Sounds and Communication** is the **Courtship and Mating in Butterflies** Raymond J.C. Cannon, 2019-12-30 The aim of this book is to present a readable account of butterfly behaviour based on field observations great photographs and the latest research The main focus is on courtship and mating including perching searching and territorial behaviour but to understand these subjects it is necessary to explain how mates are chosen and this requires sections on wing colours and patterns A chapter on butterfly vision is also essential in terms of how butterflies see the world and each other There have been exciting discoveries in all of these fields in recent years including butterfly vision butterfly photoreceptors wing patterns molecular biology wing colouration structural colours and nano architecture mating strategies and female choice ecology and behaviour **Advances in the Study of Behavior** Peter J.B. Slater, Charles T. Snowdon, Timothy J. Roper, H. Jane Brockmann, Marc Naguib, 2005-12-07 Annotation **Advances in the Study of Behavior** was initiated over 40 years ago to serve the increasing number of scientists engaged in the study of animal behavior That number is still expanding This thematic volume makes another important contribution to the development of the field by bringing together material that aggregates studies conducted on the behavior of tropical animals **Advances in the Study of Behavior** is now available online at ScienceDirect full text online from volume 30 onward **The Story of V** Catherine Blackledge, 2004 It is the seat of female sexual pleasure the site of the creation of humankind and the channel for its birth Yet we know less about the vagina its structure and function than we do about any other organ of the human body Why **Evolutionary Aesthetics** Eckart Voland, Karl Grammer, 2013-04-17 **Evolutionary Aesthetics** is the attempt to understand the aesthetic judgement of human beings and their spontaneous distinction between beauty and ugliness as a biologically adapted ability to make important decisions in life The hypothesis is both in the area of natural beauty and in sexuality with regard to landscape preferences but also in the area of artificial beauty i.e. in art and design that beauty opens up fitness opportunities while ugliness holds fitness risks In this book this adaptive view of aesthetics is developed theoretically presented on the basis of numerous examples and its consequences for evolutionary anthropology are illuminated **Specialization, Speciation, and Radiation** Kelley Tilmon, 2008-01-03 The intimate associations between plants and the insects that eat them have helped define and shape both groups for millions of years This pioneering volume is a comprehensive up to date treatment of the evolutionary biology of herbivorous insects including their relationships with

host plants and natural enemies Chapters focus on the dynamic relationships between insects and plants from the standpoint of evolutionary change at different levels of biological organization individuals populations species and clades Written by prominent evolutionary biologists entomologists and ecologists the chapters are organized into three sections Evolution of Populations and Species Co and Macroevolutionary Radiation and Evolutionary Aspects of Pests Invasive Species and the Environment The volume is unified by the idea that understanding the ecological framework of the interactions between herbivorous insects and their host plants is fundamental to understanding their evolution **The Darwinian Tradition in**

Context Richard G. Delisle, 2017-12-29 The main goal of this book is to put the Darwinian tradition in context by raising questions such as How should it be defined Did it interact with other research programs Were there any research programs that developed largely independently of the Darwinian tradition Accordingly the contributing authors explicitly explore the nature of the relationship between the Darwinian tradition and other research programs running in parallel In the wake of the Synthetic Theory of Evolution which was established throughout the 1930s 1940s and 1950s historians and philosophers of biology devoted considerable attention to the Darwinian tradition i e linking Charles Darwin to mid Twentieth Century developments in evolutionary biology Since then more recent developments in evolutionary biology have challenged in part or entirely the heritage of the Darwinian tradition Not surprisingly this has in turn been followed by a historiographical recalibration on the part of historians and philosophers regarding other research programs and traditions in evolutionary biology In order to acknowledge this shift the papers in this book have been arranged on the basis of two main threads Part I A perspective that views Darwinism as either being originally pluralistic or having acquired such a pluralistic nature through modifications and borrowings over time Part II A perspective blurring the boundaries between non Darwinian and Darwinian traditions either by contending that Darwinism itself was never quite as Darwinian as previously assumed or that non Darwinian traditions took on board various Darwinian components when not fertilizing Darwinism directly Between a Darwinism reaching out to other research programs and non Darwinian programs reaching out to Darwinism the least that can be said is that this interweaving of intellectual threads blurs the historiographical field This volume aims to open vital new avenues for approaching and reflecting on the development of evolutionary biology *Odd Couples* Daphne J.

Fairbairn, 2015-08-25 The remarkable and unique ways that male and female animals play out gender roles in nature While we joke that men are from Mars and women are from Venus our gender differences can't compare to those of many other animals For instance the male garden spider spontaneously dies after mating with a female more than fifty times his size And male blanket octopuses employ a copulatory arm longer than their own bodies to mate with females that outweigh them by four orders of magnitude Why do these gender gulfs exist Introducing readers to important discoveries in animal behavior and evolution *Odd Couples* explores some of the most extraordinary sexual differences in the animal world Daphne Fairbairn uncovers the unique and bizarre characteristics of these remarkable species and the special strategies they use to maximize

reproductive success Fairbairn also considers humans and explains that although we are keenly aware of our own sexual differences they are unexceptional within the vast animal world Looking at some of the most amazing creatures on the planet Odd Couples sheds astonishing light on what it means to be male or female in the animal kingdom **Advances in the Study of Behavior** Marc Naguib,2019-03-23 Advances in the Study of Behavior Volume 51 provides users with the latest insights in this ever evolving field Users will find new information on a variety of species including The troublesome gift the spermatophylax as a purveyor of sexual conflict and coercion Conformity and over imitation an integrative review of two forms of hyper reliance on social learning Copulatory behavior and genital morphology in vertebrates Sexual selection in polyandrous societies Lessons from the fowl Sensory information in social insects Evolution of female coloration what have we learned from birds in general and blue tits in particular Sexual selection and social behavior in spiders and more Serves the increasing number of scientists engaged in the study of animal behavior Makes another important contribution to the development of the field Presents theoretical ideas and research to those studying animal behavior and related fields

Reproductive Strategies in Insects Omkar,Geetanjali Mishra,2022-02-15 Reproduction is one of the most inherent tasks that all living organisms are actively involved in It forms the backbone of their existence with all evolutionary energies directed over billion years of creation into maximizing reproductive effort For so simple and directed a need such as maximizing reproduction it is interesting to see how much diversity and complexity exists in this task Each organism despite having the same end goal employs different strategies The complexities intricacies and strategies of successful reproduction while being extremely fascinating are equally befuddling Reproductive Strategies in Insects provides an expansive critical look at the reproductive strategies of the most diverse group of animals the insects Insects which inhabit myriad niches in all ecosystems except the oceans show the most diverse reproductive strategies ranging from simplest to most complex Reproductive strategies viz search for mates number of mates display of mate quality assessment of mate quality acceptance of mate rejection of mates forced copulations the fight for paternity pre during and post copula the modulation of paternity ovipositional strategies and parental care are described in detail in this book Also each strategy is analyzed in relation to its morphological physiological ethological ecological and evolutionary aspects Features Covers a wide variety of reproductive strategies A detailed step by step description of reproductive strategies Discusses morphological physiological ethological ecological and evolutionary aspects Modulation of these strategies and responsible modulatory factors are also discussed Well illustrated Recent research results and probable future research directions This is a niche reference book for ethologists biologists studying behavioural evolution and entomologists It may also be used as a textbook for a graduate level course in behaviour
