Beyond Conventional Models: Expanding Experimental Systems for Animal-Microbiome Interaction Research

Henning Sedorf, Jean-François Brugère, Wakako Ikeda-Ohtsubo, Aram Mikaelyan, David Kamanda Ngugi, 2022-10-21 *The Wild Mouse in Immunology* Michael Potter, Joseph H. Nadeau, Michael P. Cancro, 2012-12-06 The present volume of Current Topics in Microbiology and Immunology is a series of papers on subjects that are relevant to the growing use of wild mice in immunological microbiological and genetical research Wild mice is a jargonistic term that is used chiefly in the laboratory to refer to the naturally living forms of house mice *Mus musculus* and also other species closely related to *M. musculus* This group of species is designated by systematists as the genus *Mus* Immunologists began 20 years ago to study the polymorphisms of immunoglobulins and major histocompatibility complex antigens in wild mice An extraordinary extension of the highly polymorphic array of phenotypes known in inbred mice was encountered Breeding stocks of wild mice were brought into the laboratory This included not only *M. musculus* but also many of the available species in the genus *Mus* from Southeast Asia and Europe This availability led to other comparisons of wild and inbred mice and the discovery of other new and interesting phenotypes and genotypes It became apparent that inbred strains of mice provided only a limited window for viewing the genetic diversity of *Mus musculus* *Swine Research* United States. Cooperative State Research Service. Current Research Information System, 1983 Anthropology and Mental Health Joseph Westermeyer, 2011-06-03 No detailed description available for Anthropology and Mental Health *Cell-Extracellular Matrix Interactions in Cancer* Roy Zent, Ambra Pozzi, 2010-10-22 Cancer was thought to originate from alterations in intercellular signaling that resulted in the transformation of cells their uncontrolled proliferation and metastasis There is now an increasing body of evidence demonstrating that the surrounding matrix and cell matrix interactions are also major players in this process Cells adhere and receive signals from various extracellular matrices via transmembrane receptors the best known of which are the heterodimeric glycoproteins integrins *Animal Models of Human Disease*, 1973 **Ecology and Evolution of Cancer** Beata Ujvari, Benjamin Roche, Frederic Thomas, 2017-02-08 Ecology and Evolution of Cancer is a timely work outlining ideas that not only represent a substantial and original contribution to the fields of evolution ecology and cancer but also goes beyond by connecting the interfaces of these disciplines This work engages the expertise of a multidisciplinary research team to collate and review the latest knowledge and developments in this exciting research field The evolutionary perspective of cancer has gained significant international recognition and interest which is fully understandable given that somatic cellular selection and evolution are elegant explanations for carcinogenesis Cancer is now generally accepted to be an evolutionary and ecological process with complex interactions between tumor cells and their environment sharing many similarities with organismal evolution As a critical contribution to this field of research the book is important and relevant for the applications of evolutionary biology to understand the origin of cancers to control neoplastic progression and to prevent therapeutic

failures Covers all aspects of the evolution of cancer appealing to researchers seeking to understand its origins and effects of treatments on its progression as well as to lecturers in evolutionary medicine Functions as both an introduction to cancer and evolution and a review of the current research on this burgeoning exciting field presented by an international group of leading editors and contributors Improves understanding of the origin and the evolution of cancer aiding efforts to determine how this disease interferes with biotic interactions that govern ecosystems Highlights research that intends to apply evolutionary principles to help predict emergence and metastatic progression with the aim of improving therapies
