Challenging Popular Myths of Sex, Gender and Biology Malin Ah-King, 2013-11-27 This edited volume challenges popular notions of sex gender and biology and features international trans disciplinary research The book begins with an exploration of

supposedly natural sexual differences then looks at research in evolutionary biology and examines topics such as gender stereotypes in humans The first chapters explore important questions What are the fundamental sex differences How do genes and hormones influence an individual's sex Subsequent chapters concern topics including sex stereotypes in the field of sexual conflict how the focus on genes in evolutionary biology disregards other means of inheritance and the development of Darwin's theory of sex differences The last three chapters look at humans discussing an interdisciplinary approach to the evolution of sex differences in body height biological versus social constructive perspectives on the gendering of voices and nature culture arguments in the current political debate on paternity leave in Norway

Reproductive Biology and Phylogeny of Birds, Part A Barrie G M Jamieson, 2011-10-14 Aspects of reproduction covered in this volume include classification and phylogeny as revealed by molecular biology anatomy of the male reproductive tract and organs anatomy and evolution of copulatory structures development and anatomy of the female reproductive tract endocrinology of reproduction ovarian dynamics and follicle development

Terra Michael Novacek, 2008-11-11 A paleontologist awakens us to the extinction event that human activity is bringing about today The natural world as humans have always known it evolved close to 100 million years ago with the appearance of flowering plants and pollinating insects during the age of the dinosaurs Its tremendous history is now in danger of profound catastrophic disruption In Terra a brilliant synthesis of evolutionary biology paleontology and modern environmental science Michael Novacek shows how all three can help us understand and prevent what he and others call today's mass extinction event Humanity's use of land our consumption the pollution we create and our contributions to global warming are causing this crisis True the fossil record of hundreds of millions of years reveals that wild and bounteous nature has always evolved not quietly but thunderously as species arise flourish die off and are replaced by new species We learn from paleontology and archaeology that for 50 000 years human hunting mining and agriculture have changed many localities sometimes irrevocably But today Novacek insists our behavior endangers the entire global ecosystem And if we disregard through ignorance antipathy or apathy the theory of evolution that developed with our modern understanding of the Earth's past we not only impede enlightenment but threaten any practical strategy for our own survival The evolutionary future of the entire living planet depends on our understanding this
