Einführung In Die Theorie Und Praxis 2nd Edition:

The Future of Coaching Siegfried Greif, 2025-07-26 This open access book builds bridges between the science of coaching and coaching practice by analyzing the effects of coaching in detail and improving its practical effectiveness. Written by a proven expert in the field, it scrutinizes old and new methods of coaching and substantiates what still works and what does not. It provides guidance to sift the science from pseudoscience and charlatanism. Some of the topics it covers are: Simple and complex questioning methods, vision development, values analysis, strengths maps, narrative coaching, changing habits, executive communication, conflicts, stress management, burnout, health, behavior, team coaching, and coaching for organizational change, including e-coaching tools and artificial intelligence. The book collates the findings in an integrative systemic theory of result-oriented coaching that is open to change and addresses future developments in the coaching market, digitalization, and artificial intelligent systems in coaching, with a plea for humanistic science-driven and practice-based coaching.

International Perspectives on Writing Curricula and Development Jill Jeffery, Judy M. Parr, 2021-05-27 This book contributes to the innovation of writing education and research globally by providing crucial insights into how the structures and aims of literacy curricula vary internationally. It examines how nine education systems across five continents represent good writing in curricula that shape students' experiences learning to write in school. The book presents curricular analyses aimed at providing insight into how writing development can be better supported through innovative policy and research. The findings regarding international variation are presented under three broad dimensions: social and contextual factors that shape writing curricula, the discourses of writing reflected in curricula and official documents, and hallmarks of classroom practice, including the relationship with official discourse. Case study chapters present integrated inductive and deductive document analyses, findings of which are compared in a concluding cross-case analysis chapter. Offering a detailed comparative analysis of writing research, *International Perspectives on Writing Curricula and Development* will be of great interest to academics, researchers, and students in the fields of education, literacy, and curriculum studies. It will also be relevant reading for policymakers and curriculum designers. Chapters 1, 7, 9, 10, and 11 of this book are freely available as downloadable Open Access PDFs at <http://www.taylorfrancis.com> under a Creative Commons Attribution-NonCommercial-NoDerivatives CC BY-NC-ND 4.0 license.

International Handbook of Violence Research Wilhelm Heitmeyer, John Hagan, 2003-12-31 An international manual is like a world cruise, a once-in-a-lifetime experience. All the more reason to consider carefully whether it is necessary. This can hardly be the case if previous research in the selected field has already been the subject of an earlier review or even several competing surveys. On the other hand, more thorough study is necessary if the intensity and scope of research are increasing without comprehensive assessments. That was the situation in Western societies when work began on this project in the summer of 1998. It was then too that the challenges emerged: any manual, especially an international one, is a very special type of text which is anything but routine. It calls for a special effort, the state

of the art has to be documented for selected subject areas and its presentation made as compelling as possible The editors were delighted therefore by the cooperation and commitment shown by the eighty one contributors from ten countries who were recruited to write on the sixty two different topics by the constructive way in which any requests for changes were dealt with and by the patient response to our many queries This volume is the result of a long process It began with the first drafts outlining the structure of the work which were submitted to various distinguished colleagues Friedheim Neidhardt of Berlin Gertrud Nunner Winkler of Munich and Roland Eckert of Trier to name only a few supplied valuable comments at this stage

Who Owns Knowledge? Nico Stehr, Bernd Weiler, 2011-12-31 *Who Owns Knowledge* explores the emerging linkages between the extension of knowledge and the law It anticipates that the legal system will not only be called upon to adjudicate in matters of creative minds but will be expected to do so to an ever increasing degree Linkages between the legal system and knowledge are bound to multiply in modern societies Ironically while increasingly relying on knowledge we are simultaneously investing significant resources into

controlling this same knowledge This includes developing a system of legal governance over how knowledge is extended or enlarged Such modes of governance may take the form of regulatory legal codes or legal challenges and judgments that shape the evolution of modern society and potentially transform knowledge itself as a productive force Who Owns Knowledge asks such questions as What is the appropriate balance of public and private interests involved in this process How can creative powers natural resources and indigenous knowledge be protected from either public or private exploitation Does the law have the power to prevent this exploitation or is adaptive technology needed Also in this identity theft conscious age how can the rights of the individual be protected against policies allowing access to any kind of information especially confidential information The editors and contributors demonstrate that the relationship between knowledge and the law needs to be further researched and discussed Who Owns Knowledge is a must read for those interested in the subjects of intellectual property the history and development of modern legal and economic systems and their entanglements and how judicial systems make choices between the legal and economic systems and especially between the public and private good and their often opposing interests

Social and Environmental Dimensions of Organizations and Supply Chains Marcus Brandenburg, Gerd J. Hahn, Tobias Rebs, 2017-07-13 This book focuses on environmental and social factors in international supply chains and industry networks It explores whether socially responsible and environmentally conscious operations are complementary or conflictive to economic targets The book elaborates on innovative approaches to manage the economic ecological and social performance in supply networks from different perspectives In addition it links sustainability to operational processes and illustrates specific application contexts Moreover it covers the social dimension of sustainability The rise of sustainability in management forces enterprises to revisit the concept of profitability that drives their operations Social standards and ecological targets represent critical factors that challenge industry networks The interplay of these goals requires new insights from scientific research and managerial practice New approaches and systems are needed to minimize environmental and social harms and to promote sustainability

Philosophy of Educational Knowledge W. Brezinka, 2012-12-06 For two reasons we are particularly proud to include Wolfgang Brezinka's Philosophy of Educational Knowledge in this series of books on Philosophy of Education The first is the philosophical interest of the work itself its remarkable scholarship and the importance of the philosophical positions will be obvious to all readers The second is that it brings to the English speaking world a wonderful example of educational philosophy as now being practiced in the German speaking world All too often philosophers in the Anglo American tradition have not seen the sort of perspective on educational thinking that infuses this work And since this book has been widely read in its original version it has had a considerable impact upon philosophy of educational research and science in the German speaking countries An understanding of this may help in the development of even more cooperative relations among students of education in all countries C 1 B Macmillan D C Phillips PREFACE TO THE ENGLISH EDITION 1 am not unmindful how little can be done in a mere treatise on

Logic or how vague and unsatisfactory all precepts of Method must necessarily appear when not practically exemplified in the establishment of a body of doctrine Doubtless the most effectual mode of showing how the sciences maybe constructed would be to construct them JOHNSTUARTMILL 1843 1 Parents have a duty to educate their children teachers to educate their pupils For this reason there is widespread interest in education Knowledge of education has long been offered under names like pedagogy pedagogics pedagogyoreducational theory Originally this meant practical knowledge based on common sense Since the Enlightenment however attempts have been made to acquire scientific knowledge of education

The Semiotic Sphere Thomas A. Sebeok, Jean Umiker-Sebeok, 2012-12-06 Although semiotics has in one guise or another flourished uninterruptedly since pre Socratic times in the West and important semiotic themes have emerged and developed independently in both the Brahmanic and Buddhist traditions semiotics as an organized undertaking began to bloom only in the 1960s Workshops materialized with a perhaps surprising spontaneity over much of Europe Eastern and Western and in North America Thereafter others quickly surfaced almost everywhere over the literate globe Different places strategically allied themselves with different legacies but all had a common thrust to aim at a general theory of signs by way of a description of different sign systems their comparative analysis and their classification More or less permanent confederations were forged with the most diverse academic disciplines and amazingly varied frameworks were devised suited to the needs of the times and the sites to carry the work of consolidation forward Bit by bit mutually supportive international networks were put together Today it can truly be asserted that semiotics has become a global enterprise This of course is far from saying that the map is uniform or even that world wide homogeneity is in the least desirable While our conjoint ultimate goal remains steadily in focus the multiplicity of avenues available for its realization is inherent in the adventure of the search itself

Variable Structure Systems with Application to Economics and Biology

R. R. Mohler,A. Ruberti,2012-12-06 The proceedings of the Second US Italy Seminar on Variable Structure Systems is published in this volume Like the first seminar its conception evolved from common research interests on bilinear systems at the Istituto di Automatica of Rome University and at the Electrical and Computer Engineering Department of Oregon State University Again the seminar was focused on variable structure systems in general In this case however emphasis is given to applications in biology and economics along with theoretical investigations which are so necessary to establish a unified theory and to motivate further developments in these applications of social significance By bringing together the talents of social and biological scientists with those of engineers and mathematicians from throughout Italy and the United States the seminar was intended to yield a cross pollination of significant results and a base for more meaningful future research The editors are encouraged by the progress with which they hope the reader will agree is made in this direction No pretense is made however that completely satisfactory integration of theoretical results and applications has been accomplished at this time Among the more important conclusions which have resulted from this seminar are that bilinear and more general variable structure models arise in a natural manner from basic principles for certain biological and economic processes

Current Research in Biology Education Konstantinos Korfiatis,Marcus Grace,2022-03-16 This book is a collection of full papers based on the peer reviewed submissions accepted for the ERIDOB 2020 conference which was cancelled due to COVID 19 ERIDOB brings together researchers in Biology Education from around the world to share and discuss their research work and results It is the only major international conference on biology education research and all the papers therefore are written by international researchers from across Europe and beyond which present the findings from a range of contemporary biology education research projects They are all entirely new papers describing new research in the field The papers are peer reviewed by experienced international researchers selected by the ERIDOB Academic Committee The papers reflect the ERIDOB conference strands by covering topics on Socioscientific issues Nature of Science and scientific thinking Teaching and learning in biology Perceptions of biology and biology education Textbook analysis Outdoor and environmental education By providing a collection of new research findings from many countries this book is a great resource for researchers and practitioners such as school college and university biology teachers around the world It is useful for training biology teachers and therefore valuable to teacher training institutions
