Einstein Manifolds:

Einstein Manifolds Arthur L. Besse, 2007-12-03 Einstein's equations stem from General Relativity. In the context of Riemannian manifolds, an independent mathematical theory has developed around them. This is the first book which presents an overview of several striking results ensuing from the examination of Einstein's equations in the context of Riemannian manifolds. Parts of the text can be used as an introduction to modern Riemannian geometry through topics like homogeneous spaces, submersions, or Riemannian functionals. *Essays on Einstein Manifolds* Claude LeBrun, McKenzie Yuen-kong Wang, 1999 This is the sixth volume in a series providing surveys of differential geometry. It addresses Einstein manifolds with zero Ricci curvature, rigidity and compactness of Einstein metrics, general relativity, the stability of Minkowski space-time, and more. Einstein Manifolds Arthur L. Besse, 2014-01-15 Lectures on Kähler Geometry Andrei Moroianu, 2007-03-29 Kähler geometry is a beautiful and intriguing area of mathematics of substantial research interest to both mathematicians and physicists. This self-contained graduate text provides a concise and accessible introduction to the topic. The book begins with a review of basic differential geometry before moving on to a description of complex manifolds and holomorphic vector bundles. Kähler manifolds are discussed from the point of view of Riemannian geometry, and Hodge and Dolbeault theories are outlined together with a simple proof of the famous Kähler identities. The final part of the text studies several aspects of compact Kähler manifolds: the Calabi conjecture, Weitzenböck techniques, Calabi-Yau manifolds, and divisors. All sections of the book end with a series of exercises, and students and researchers working in the fields of algebraic and differential geometry and theoretical physics will find that the book provides them with a sound understanding of this theory. Einstein Manifolds, 2008 Riemannian Topology and Geometric Structures on Manifolds Krzysztof Galicki, Santiago R. Simanca, 2010-07-25 *Riemannian Topology and Structures on Manifolds* results from a similarly entitled conference held on the occasion of Charles P. Boyer's 65th birthday. The various contributions to this volume discuss recent advances in the areas of positive sectional curvature, Kähler and Sasakian geometry, and their interrelation to mathematical physics, especially M-theory and superstring theory. Focusing on these fundamental ideas, this collection presents review articles, original results, and open problems of interest. **Advances in Lorentzian Geometry** Matthias Plaue, Alan D. Rendall, Mike Scherfner, 2011 Offers insight into the methods and concepts of a very active field of mathematics that has many connections with physics. It includes contributions from specialists in differential geometry and mathematical physics, collectively demonstrating the wide range of applications of Lorentzian geometry and ranging in character from research papers to surveys to the development of new ideas. The Dirac Spectrum Nicolas Ginoux, 2009-06-11 This volume surveys the spectral properties of the spin Dirac operator. After a brief introduction to spin geometry, we present the main known estimates for Dirac eigenvalues on compact manifolds with or without boundaries. We give examples where the spectrum can be made explicit and present a chapter dealing with the non-compact setting. The methods mostly involve elementary analytical techniques and are therefore

accessible for Master students entering the subject A complete and updated list of references is also included

Riemannian Geometry of Contact and Symplectic Manifolds David E. Blair, 2013-11-11 The author's lectures Contact Manifolds in Riemannian Geometry volume 509 1976 in the Springer Verlag Lecture Notes in Mathematics series have been out of print for some time and it seems appropriate that an expanded version of this material should become available The present text deals with the Riemannian geometry of both symplectic and contact manifolds although the book is more contact than symplectic This work is based on the recent research of the author his students colleagues and other scholars the author's graduate courses at Michigan State University and the earlier lecture notes Chapter 1 presents the general theory of symplectic manifolds Principal circle bundles are then discussed in Chapter 2 as a prelude to the Boothby Wang fibration of a compact regular contact manifold in Chapter 3 which deals with the general theory of contact manifolds Chapter 4 focuses on Riemannian metrics associated to symplectic and contact structures Chapter 5 is devoted to integral submanifolds of the contact subbundle In Chapter 6 we discuss the normality of almost contact structures Sasakian manifolds K contact manifolds the relation of contact metric structures and CR structures and cosymplectic structures Chapter 7 deals with the important study of the curvature of a contact metric manifold In Chapter 8 we give a selection of results on submanifolds of Kähler and Sasakian manifolds including an illustration of the technique of A Ros in a theorem of F Urbano on compact minimal Lagrangian submanifolds in $\mathbb{C}P^n$

Geometry of String Theory Compactifications Alessandro Tomasiello, 2022-01-13 String theory is a leading candidate for the unification of universal forces and matter and one of its most striking predictions is the existence of small additional dimensions that have escaped detection so far This book focuses on the geometry of these dimensions beginning with the basics of the theory the mathematical properties of spinors and

differential geometry It further explores advanced techniques at the core of current research such as G structures and generalized complex geometry Many significant classes of solutions to the theory s equations are studied in detail from special holonomy and Sasaki Einstein manifolds to their more recent generalizations involving fluxes for form fields Various explicit examples are discussed of interest to graduates and researchers Modern Geometry Vicente Muñoz,Ivan Smith,Richard P.
