Einstein's Other Theory Donald W. Rogers, 2020-08-04 Einstein's theories of relativity piqued public curiosity more than any other mathematical concepts since the time of Isaac Newton Scientists and non scientists alike struggled not so much to grasp as to believe the weird predictions of relativity theory shrinking space ships bending light beams and the like People all over the world watched with

fascination as Einstein's predictions were relentlessly and unequivocally verified by a hundred experiments and astronomical observations. In the last decade of the twentieth century another of Einstein's theories has produced results that are every bit as startling as the space-time contractions of relativity theory. This book addresses his other great theory, that of heat capacity and the Bose-Einstein condensate. In doing so it traces the history of radiation and heat capacity theory from the mid-19th century to the present. It describes early attempts to understand heat and light radiation and proceeds through the theory of the heat capacity of solids. It arrives at the theory of superconductivity and superfluidity, the astonishing property of some liquids to crawl spontaneously up and out of their containers and the ability of some gases to cause light to pause and take a moment's rest from its inexorable flight forward in time. Couched in the terminology of traditional physical chemistry, this book is accessible to chemists, engineers, materials scientists, mathematicians, mathematical biologists, indeed to anyone with a command of first-year calculus. In course work it is a collateral text to third-semester or advanced physical chemistry, introductory statistical mechanics, statistical thermodynamics, or introductory quantum chemistry. The book connects with mainstream physical chemistry by treating boson and fermion influences in molecular spectroscopy, statistical thermodynamics, molecular energetics, entropy, heat capacities, especially of metals, superconductivity, and superfluidity.

Einstein's Relativity Fred I. Cooperstock, Steven Tieu, 2012-08-04. This richly illustrated book is unique in bringing Einstein's relativity to a higher level for the non-specialist than has ever been attempted before, using nothing more than grade-school algebra. Bondi's approach with spacetime diagrams is simplified and expanded, clarifying the famous asymmetric aging of twins paradox. Einstein's theory of gravity, general relativity, is simplified for the reader using spacetime diagrams. The theory is applied to important topics in physics, such as gravitational waves, gravitational collapse and black holes, time machines, the relationship to the quantum world, galactic motions, and cosmology.

Collaborative Screenwriting and Story Development Marc Handler, 2023-12-05. This is a comprehensive guide to teach writing and story development from a collaborative, global perspective. This book teaches writers how to take full advantage of emerging opportunities both locally and globally. With an increasing number of international co-productions and many screenwriters now working collaboratively in writers' rooms and development groups, author Marc Handler explains how to work cooperatively with others to break stories, plan seasons, create characters, and build series. To succeed, readers will learn how to give and receive feedback effectively, adapt to the style and constraints of executives and brands, and contribute to the team-building process, all within an increasingly global media industry that is in constant flux. This book will help readers develop a global perspective, ensuring that they are prepared for new opportunities as they arise. Marc Handler provides cultural insight and understanding as he describes the fundamentals as well as advanced story skills. This book is essential reading for students taking classes such as Screenwriting Fundamentals, Writing for Film and TV, Introduction to Television Writing, and Advanced Screenwriting, as well as aspiring and early-career screenwriters, showrunners, producers, and creative executives.
