brims with detail gleaned from Crelinsten's far-reaching inquiry into the history and development of relativity. Crelinsten concludes that the well-known British eclipse expedition of 1919 that made Einstein famous had less to do with the scientific acceptance of his theory than with his burgeoning public fame. It was not until the 1920s when the center of gravity of astronomy and physics shifted from Europe to America that the work of prestigious American observatories legitimized Einstein's work. As Crelinsten so expertly shows, the glow that now surrounds the famous scientist had its beginnings in these early debates among professional scientists working in the glare of the public spotlight.

*Swimming to the Moon* Robert Drewe, 2014-11-01 From a floury encounter on a baker's work table to the art of sitting backwards on chairs from budgie training to spontaneous human combustion, this collection showcases the nonfiction writing of one of Australia's best-loved authors. These pieces encompass suburban portraits and coastal living, affectionate nostalgia, and the absurdity of the every day. They are endearing and often hilarious snapshots of life from a master novelist who has turned the column into an artform.

**TISM's Machiavelli and the Four Seasons** Tyler Jenke, 2025-02-20 An in-depth look at the rise of enigmatic Australian rock band TISM, the unexpected success of their 1995 album *Machiavelli and the Four Seasons*, and the continued trajectory of their storied career. Focusing on one of Australia's most enigmatic bands, *This Is Serious Mum*, better known as TISM, Tyler Jenke forms an in-depth analysis of the anonymous pseudonymous Melbourne collective's rise to prominence and unlikely success on the popular music charts with their third album *Machiavelli and the Four Seasons*. 1995 Jenke details TISM's origins as they slowly went from a bedroom concept to an underground success to a staple of concert stages and commercial radio in Australia, growing a rabid fanbase in the process. Despite the anti-commercial tendencies of TISM, whose album artwork didn't feature the band, whose band members performed under pseudonyms, and who rarely gave interviews, never mind sincere answers, TISM became a commercially successful group. In this book, Jenke identifies the steps the band took to shift their sound from their tried and true experimental Australian pub rock roots to the burgeoning youthful electronic music genre, employing synthesizers and samplers. With their new sound, TISM incorporated Dadaism, the use of unusual or everyday sounds, and both avant-garde and classic pop musicianship. The band's new sound resulted in both top ten success and an ARIA Award. This is the first book to dissect TISM's rise to fame within the Australian music industry and analyze TISM's status as one of the most memorable, mysterious, and paradoxically successful groups in the country's vibrant alternative music scene.

**Progress in Optics**, 1981-01-01. **Physical Chemistry: Quantum Mechanics** Horia Metiu, 2006-02-21. This is a new undergraduate textbook on physical chemistry by Horia Metiu published as four separate paperback volumes. These four volumes on physical chemistry combine a clear and thorough presentation of the theoretical and mathematical aspects of the subject with examples and applications drawn from current industrial and academic research. By using the computer to solve problems that include actual experimental data the author is able to cover the subject matter at a practical level. The books closely integrate the theoretical chemistry being taught with industrial and laboratory practice. This approach enables the student to compare theoretical projections with experimental results thereby providing a realistic grounding for future practicing chemists and engineers. Each volume of Physical Chemistry includes Mathematica and Mathcad Workbooks on CD ROM. Metiu's four separate volumes Thermodynamics Statistical Mechanics Kinetics and Quantum Mechanics offer built-in flexibility by allowing the subject to be covered in any order. These textbooks can be used to teach physical chemistry without a computer but the experience is enriched substantially for those students who do learn how to read and write Mathematica or Mathcad programs. A TI 89 scientific calculator can be used to solve most of the exercises and problems.
