Goodwin, Laurie Dougherty, Kevin Gallagher, 1998-10 Human impacts on the environment are largely driven by economic forces If a more ecologically sustainable world is to be achieved significant changes must be made to the current growth and consumption dependent economic system The Frontier Issues in Economic Thought series was designed to assist the growing number of economists and others who are responding to the need for new thinking about economics in the face of environmental and social forces that are reshaping the world The Changing Nature of Work examines the causes and effects of the rapid transformation of the world of work It provides concise summaries of the key writings on work and workplace issues extending the frontiers of labor economics to include the often overlooked social and psychological dimensions of work The book begins with a foreword by former Secretary of Labor Robert Reich that presents labor in contemporary perspective An introductory overview provides a brief history of the changing nature of work and situates current problems in the context of longer term developments Following that are eight topical sections that feature three to five page summaries for each of the ten to twelve most important articles or book chapters on a subject Sections cover new directions in labor economics social and psychological dimensions of work and unemployment globalization and labor new technologies and organizational change flexibility and internal labor markets new patterns of industrial relations family gender paid and unpaid work difference and diversity in the workplace The book provides a roadmap for scholars on the vast and diverse literature concerning labor issues and affords students a quick overview of that rapidly changing field It is an important contribution to the series and is a valuable book for anyone interested in labor as well as for students and scholars of labor economics industrial sociology industrial relations social psychology and their respective disciplines Labour Market Participation in India Arup Mitra, Aya Okada, 2017-11-16 This book focuses on the gender specific labour force participation rates across regions in India and identifies its most important determinants Before concentrating on the Indian context it examines the participation rates of various countries in the Asia Pacific region Not unexpectedly the study shows that the rate is significantly lower for females than for males in this region The rural urban differentials are more pronounced and the inter state variations are more sizable among females than males Even in large cities the female labour market participation is

lower than that in the rural areas despite higher levels of education However in terms of inter spatial rural urban city variations the impact of infrastructure education health and urbanization on the labour force participation of both genders is quite distinct On the whole the study reinforces the stance that women s participation in productive activities has a doubly positive impact it not only raises the household income but also contributes to the wellbeing of the household These findings are important from a policy perspective as different infrastructure variables are confirmed to improve both participation and labour productivity As such the book offers a valuable resource not only for researchers but also for NGOs and policymakers
