Economic Microbiology: Primary Products of Metabolism A.H. Rose, 2012-12-02 Economic Microbiology Volume 2  
Primary Products of Metabolism is part of a multi volume series that aims to provide authoritative accounts of the many facets of exploitation and control of microbial activity. It discusses the production of industrially important chemicals by microbiological processes specifically the production of primary products of metabolism. This volume includes accounts of the production of organic acids, nucleotides and amino acids which form large and stable sectors of the microbiological industries. It also provides information on polysaccharide fermentations which are currently undergoing extensive development. Further there are discussions of the production of lipids and polyhydroxy alcohols which have yet to be introduced on a commercial scale but could well become economically viable in the near future. Finally there is also an account of the production of acetone and butanol by bacteria. This fermentation process featured significantly in the career of Chaim Weizmann, the first President of the State of Israel and it is still operated in some countries. Food Hydrocolloids Martin Glicksman, 2019-07-17  
First Published in 1982, this three volume set explores the value of hydrocolloids in food. Carefully compiled and filled with a vast repertoire of notes, diagrams and references, this book serves as a useful reference for dietitians and other practitioners in their respective fields. **Food Technology in Australia**, 1974 *Food Chemistry and Nutritional Biochemistry* Charles Zapsalis, R. Anderle Beck, 1985  
Abstract: A textbook for students of food science and nutrition and a comprehensive reference volume for professional food scientists, practicing dietitians and other medical professionals, provides a detailed integration of food chemistry, biochemistry and nutrition. The text consists of 3 major parts. The first part details the basic chemistry of food constituents, describes analytical methods for determining the nutrient composition of foods and provides detailed discussions of nutritional energetics, photosynthesis and food industry colloidal food systems. The second part outlines the integrated metabolism of all food constituents and discusses trace elements, food toxicants, nutritional and etiological factors related to various disease states, the effects of hormonal control on nutritional biochemical sequences and food drug interactions. The final part of the book provides basic information on molecular genetics as a basis for the application of engineering to the development of new foods. An extensive use of tabular data and illustrations is made throughout the book and reference information is provided in 3 appendices. **Functional Properties of Food Components** Yeshajahu Pomeranz, 2012-12-02  
Functional Properties of Food Components reviews the roles and functions of specific components in foods. It addresses three main questions: What in the biochemical make up of food components makes them tick in the production of desirable and acceptable foods? Why do those components/entities perform the way they do and often why do they fail to perform as expected? Which functions continue to be elusive and require more searching and probing? The book is organized into three parts. Part I discusses specific food components such as water, carbohydrates, corn sweeteners and wheat carbohydrates, proteins, lipids and enzymes. Part II deals with food additives and foods of the future and reviews the role of

components in four well established foods dairy wheat flour malt and soybean products Part III presents the available information and documentation on food components This book is intended for the undergraduate with a background in the general biochemistry of natural materials but is also interested in specific information on the function of those components in foods It is also meant for the food scientist or technologist who is familiar with food formulation and production and for any other interested reader with an appropriate background whether managerial or scientific
