## **Education And Mind In The Knowledge Age:**

**Education and Mind in the Knowledge Age** Carl Bereiter, 2005-04-11 In this book Carl Bereiter a distinguished and well known cognitive educational psychologist presents what he calls a new way of thinking about knowledge and the mind. He argues that in today's Knowledge Age education's conceptual tools are inadequate to address the pressing educational challenges and opportunities of the times. Two things are required first to replace the mind as container metaphor with one that envisions a mind capable of sustaining knowledgeable intelligent behavior without actually containing stored beliefs second to recognize a fundamental difference between knowledge building and learning both of which are essential parts of education for the knowledge age. Connectionism in cognitive science addresses the first need certain developments in post positivist epistemology address the second. The author explores both the theoretical bases and the practical educational implications of this radical change in viewpoint. The book draws on current new ways of thinking about knowledge and mind including information processing cognitive psychology situated cognition constructivism social constructivism and connectionism but does not adhere strictly to any camp. Above all the author is concerned with developing a way of thinking about the mind that can usher education into the knowledge age. This book is intended as a starting point.
