## **Electronic Information Systems In Scitech Libraries:**

*Electronic Information Systems in Sci-Tech Libraries* Cynthia A. Steinke, 2019-12-06 This book first published in 1990 analyses the variety of ways in which libraries extend their resources to users beyond the physical walls of their organization. Librarians discuss the concept of the library as more than just a place since its holdings can now appear on the screen of users' computers in the same city or in a city hundreds of miles away but rather as a force that electronically links users directly with both local and remote sources of information. Six informative chapters examine electronic information systems and document delivery from the local collection to the workplace between system libraries and from non library sources. Readers can look first hand at some of the most sophisticated and widespread systems in the country including four academic libraries that promote electronic services to remote users and two special libraries offering innovative services. The authoritative contributing authors also forecast new systems and services.

**Emerging Issues in the Electronic Environment** Jeannie P Miller, 2013-04-15 Explore the issues that are changing user/librarian interactions in today's evolving electronic libraries. This book examines the rapid advances in technology and scientific discovery that have changed the way sci-tech library users seek information, changes which have also necessitated increasingly high levels of skill in information technology and advanced subject knowledge from librarians. From negotiating the intricacies of working with e-journals to simplifying the data collection process, anyone involved in allocating library resources or prioritizing research agendas will find relevant, useful information here, as will those involved in library education. **Emerging Issues in the Electronic Environment: Challenges for Librarians and Researchers in the Sciences** begins with **Scientific Communication: New Roles and New Players**, a detailed examination of the evolution of the information seeking behavior of scientists from the days of print-based resources to today's electronic media. Next, you'll find techniques designed to maximize the ability of scientists to make lucky connections in their electronic search for information in **Too Important to be Left to Chance: Serendipity and the Digital Library**. Four chapters in **Emerging Issues in the Electronic Environment** bring you up to date information on various aspects of working with e-journals: **For Better or Worse: The Joys and Woes of E-Journals** investigates the impact of electronic-only journal holdings on collection development decisions and the accompanying issues of archiving economics content and research use; **Scan It and They Will Come But Will They Cite It?** provides citation data on the usefulness and impact of retrospective digitization projects for journal contents; **The Use of Online Supplementary Material in High Impact Scientific Journals** raises vital questions as to whether the print or electronic article should be regarded as the primary archival resource; **Challenges and Opportunities for Bibliometrics in the Electronic Environment: The Case of the Proceedings of the Oklahoma Academy of Science** investigates how issues of access, copyright and fair use, as well as differences among online file formats, may impact bibliometric analysis. Two chapters in **Emerging Issues in the Electronic Environment** are designed to help simplify the data collection process: **Information Overload: Keeping**

Current Without Being Overwhelmed will show you how to identify needed sources by using current awareness services and e mail filtering technologies The Impact of Electronic Bibliographic Databases and Electronic Journal Articles on the Scholar s Information Seeking Behavior and Personal Collection of Reprints reviews organizational methods for managing large collections of electronic articles In addition this forward thinking book contains four chapters that point out possible avenues for increased librarian facilitated service to users Biology Databases for the New Life Sciences discusses the new sequence microarray and protein structure databases the emergence of bioinformatics and the opportunities available to librarians in this developing area Map and Spatial Data Acquisitions in the Electronic Age shows how the traditionally complicated and time consuming process of acquiring cartographic information can be simplified by efficient use of the Internet Webinar Technology Applications in Libraries reviews the operation application and features of Webinars and compares this technology with Web tutorials virtual reference and courseware management systems videoconferencing and Webcasting Preserving Digital Librari

*Electronic Expectations* Tony Stankus, 2000-04-18 Explore the future of Internet based Science Journals *Electronic Expectations* Science Journals on the Web chronicles the convergence of financial technical and public policy considerations that turned what seemed like science fiction twenty years ago into a library fact of life today The book shows that while electronic publication greatly speeds issuance of important scientific results of enduring value it also has the potential to lower the economic threshold at which crank papers and marginal publications can gain a wide if sadly misled audience in the short run In *Electronic Expectations* editor Tony Stankus predicts with splendid irony that the electronic journals that will matter the most to genuine scientific progress will be the web versions of long standing leaders among traditional print journals whose electronic typesetting requirements gave the web its first format conventions and rules for safe content transmission *Electronic Expectations* will empower you to assess the existing print journal system and its prospects for improvement through electronic publishing discern the competing motivations and strategies of science researchers librarians publishers and journal aggregators in going electronic identify the web winners and losers after these first ten years understand the underlying business and technological warfare affecting the larger future of the internet *Electronic Expectations* demonstrates that while scientists invented the web they no longer control it and that even the very largest research organizations libraries publishers and journal aggregators will to a substantial degree be at the technological and economic mercy of commercial users of the web
