Electrophotography And Development Physics:

Electrophotography and Development Physics Lawrence B. Schein, 2013-03-07 Electrophotography and Development Physics focuses on the complicated and increasingly important technology found in photocopiers and laser printers An introduction chapter acquaints the reader with the technical history of electrophotography its current and projected markets and also alternative related copying and printing technologies A concise description of the physics of the complete electrophotographic process is followed by an in depth treatment of static electricity The three types of development systems two component monocomponent and liquid and their associated charging mechanisms In this second edition a discussion of the new color copiers and a chapter updating the original material have been added On mastering this material which is presented in a manner suitable for both the newcomer and the established expert the reader will have a working knowledge of the electrophotographic process and a detailed knowledge of its important subsystem development

Electrophotography and Development Physics Lawrence B. Schein, 2012-12-06 Electrophotography also called xerography the technology inside the familiar copier has become increasingly important to modern society Since the first automatic electrophotographic copiers were introduced in 1959 they have become indispensable to the modern office and now constitute a multi billion dollar industry involving many of the world's largest corporations By the 1990s it is expected that electrophotography will be one of the most prevalent printer technologies This will occur because of the growing need for printers that are quiet that can produce multiple fonts and that can print graphics and images Electrophotographic printers satisfy these requirements and have demonstrated economic and technical viability over an enormous speed range from 6 to 220 pages per minute with output quality that approaches offset printing Organizations contemplating designing a new electrophotographic copier or printer need to deal with two sets of issues First for each of the six process steps in electrophotography there are several different technologies that must be evaluated and chosen For example there are three development technologies dual component monocomponent and liquid cleaning can be done with a blade or brush and the photoconductor can be inorganic or organic either of which can be configured in the form of a belt or a drum Second once a technology for each step is chosen it must be optimized and integrated with the other process steps This optimization and integration is facilitated by a firm scientific understanding of the technologies being considered

Electrophotography and Development Physics Lawrence B. Schein, 1988-06-30 **Organic Photoreceptors for Xerography** Paul M.
