Carpenter, Timothy D. Comar, 2013 There is a gap between the extensive mathematics background that is beneficial to biologists and the minimal mathematics background biology students acquire in their courses The result is an undergraduate education in biology with very little quantitative content New mathematics courses must be devised with the needs of biology students in mind In this volume authors from a variety of institutions address some of the problems involved in reforming mathematics curricula for biology students The problems are sorted into three themes Models Processes and Directions It is difficult for mathematicians to generate curriculum ideas for the training of biologists so a number of the curriculum models that have been introduced at various institutions comprise the Models section Processes deals with taking that great course and making sure it is institutionalized in both the biology department as a requirement and in the mathematics department as a course that will live on even if the creator of the course is no longer on the faculty Directions looks to the future with each paper laying out a case for pedagogical developments that the authors would like to see

Foundations of Health Psychology Howard S. Friedman, Roxane Cohen Silver, 2007

Health psychology is the scientific study of psychological processes related to health and health care. Although the field is only 25 years old, it has burgeoned into a major scientific and clinical discipline. Health psychology has excellent scientific journals, thousands of scientists and practitioners, and many students. Yet there has not been a sufficient statement or explication of the foundational concepts upon which this flourishing field is built. *Foundations of Health Psychology* brings together top experts to provide a much needed conceptual base for this rapidly expanding field. Rather than take a medical model approach, the volume examines health psychology from a theoretical, conceptual, and psychological perspective. After presenting an overview of the field's history and methods, the contributors address core concepts of the biopsychosocial approach to health and then discuss applications to health promotion and illness prevention and treatment. Providing a deep understanding of the intellectual foundations of health psychology, this volume will be invaluable for both new and experienced researchers as well as students and other scholars seeking a firm basis for successful research and practice.

The committee comments on statements in the original book that proved controversial or that have been misapplied in the courts. This volume offers recommendations for handling DNA samples.

performing calculations and other aspects of using DNA as a forensic tool modifying some recommendations presented in the 1992 volume The update addresses two major areas Determination of DNA profiles The committee considers how laboratory errors particularly false matches can arise how errors might be reduced and how to take into account the fact that the error rate can never be reduced to zero Interpretation of a finding that the DNA profile of a suspect or victim matches the evidence DNA The committee addresses controversies in population genetics exploring the problems that arise from the mixture of groups and subgroups in the American population and how this substructure can be accounted for in calculating frequencies This volume examines statistical issues in interpreting frequencies as probabilities including adjustments when a suspect is found through a database search The committee includes a detailed discussion of what its recommendations would mean in the courtroom with numerous case citations By resolving several remaining issues in the evaluation of this increasingly important area of forensic evidence this technical update will be important to forensic scientists and population geneticists and helpful to attorneys judges and others who need to understand DNA and the law Anyone working in laboratories and in the courts or anyone studying this issue should own this book *The Journal of Education* ,1921 **Resources in Education** ,1997
