*Business Mindframe, The: The General Truth Of Business Redefining Business Management Knowledge* Baldwin Hui, Andrew Siu, Gary Ching, 2013-10-01 Business knowledge has been evolving ever since the emergence of the first economic book The Wealth of Nations written by Adam Smith A profound load of business management theories concepts notions techniques and tools have been developed However pragmatic applications of those good stuffs to business in practice seem not quite satisfactory Many evidences show that the majority of senior managers are still reactive instead of proactive to the environmental changes myopia in strategic planning inconsistent in managing and bias in analyzing Those are obviously the handicaps in the treacherously changing business environment On the other hand the under performance of MBA graduates somehow reveals that there might be a need to renovate and supplement the current education system in management Those problems will be well defined and addressed in this book through introducing a new approach in thinking and effective methods that can readily help resolve these problems Unlike the pure academic writings our principles systems methods and tools are developed based upon not only academic theories but also the practical experiences through being practiced and testified in numerous business cases in reality Furthermore our principles and systems are designed to be readily applicable to business in practice Business in its nature is a holistic and indivisible piece of matter and it is also a complex volatile and conceptual matter as well The former characteristics hinder the business practitioners from managing and making decisions effectively while the latter ones hinder the students from acquiring the mastery of its overall rationale Image that without a holistic and integrative framework and engineering mindset the tasks of business planning and implementation might end up like constructing a cross sea bridge without an overall blueprint and engineering concepts and practices Unfortunately there is by far no such a single framework that provides a holistic view systematically and visually that allows people to concisely capture the essence of business

Conceptualization is deemed to be one of the crucial abilities in strategic planning and decision making for senior executive level and usually becomes a bottleneck for many middle managers to move up along their career ladder One of the challenges of conceptualizing business lies in the complexity and vagueness of the relationship among numerous business elements For removing this difficulty to a considerable extent we take the systematic approach to provide the framework that holistically captures the panorama of business environment and logically integrates the essential business elements in seamless manner from financial status and performance to management functions to strategy to market environment to macro environment Essentially our system serves as a frame of mind in the field of business called Business MindFrame in which people can be aided in better modeling business contexts reasoning the business decisions out and charting the effective courses of actions rationally Published by SCPG Publishing Corporation and distributed by World Scientific for all markets except China
