P Roess,Elena . S Prassas,2014-04-03 Since 1950 the Highway Capacity Manual has been a standard used in the planning design analysis and operation of virtually any highway traffic facility in the United States It has also been widely used abroad and has spurred the development of similar manuals in other countries The twin concepts of capacity and level of service have been developed in the manual and methodologies have been presented that allow highway traffic facilities to be designed on a common basis and allow for the analysis of operational quality under various traffic demand scenarios The manual also addresses related pedestrian bicycle and transit issues This book details the fundamental development of the concepts of capacity and level of service and of the specific methodologies developed to describe them over a wide range of facility types The book is comprised of two volumes Volume 1 this book focuses on the development of basic principles and their application to uninterrupted flow facilities freeways multilane highways and two lane highways Weaving merging and diverging segments on freeways and multilane highways are also discussed in detail Volume 2 focuses on interrupted flow facilities signalized and unsignalized intersections urban streets and arterials It is intended to help users of the manual understand how concepts approaches and specific methodologies were developed and to understand the underlying principles that each embodies It is also intended to act as a basic reference for current and future researchers who will continue to develop new and improved capacity analysis methodologies for many years to come Electronic Government: Concepts, Methodologies, Tools, and Applications Anttiroiko, Ari-Veikko,2008-03-31 Provides research on e government and its implications within the global context Covers topics such as digital government electronic justice government to government information policy and cyber infrastructure research and methodologies **Electronic Business: Concepts, Methodologies, Tools, and Applications** Lee, In,2008-12-31 Enhances libraries worldwide through top research compilations from over 250 international authors in the field of e business **History and Electronic Artefacts** Edward Higgs,1998 We are now entering a world of electronic

communications where an increasing amount of contemporary information is created and retained only in electronic form How will such unstable flows of information be preserved for future historians Will the future have a past Will the history of our contemporary world be lost to our descendants History and Electronic Artefacts is the first publication to examine the implications of this revolution for historical research Historians are used to handling paper and parchment record in archives These are actual pieces of correspondence which passed between historical actors They are also relatively stable artefacts which can be preserved easily Two factors introduced by the electronic revolution threaten the existence of paper archives the dissociation between information content and the media by which it is transmitted ruptures the solidity of the archival object The ability to store electronic information anywhere and access it remotely via networks could make the central paper archive redundant Experts from the fields of information management and technology data archiving library science as well as historians consider the issues raised in depth The authors also place a unique emphasis on European developments
