Gel Electrophoresis of Proteins B. D. Hames, 1998-10-01 This new edition of *Gel Electrophoresis of Proteins* is a completely new text with eight of the ten chapters written by new authors It presents the best methods hints and tips for core procedures such as one dimensional polyacrylamide gel electrophoresis isoelectric focusing two dimensional gel electrophoresis preparative gel electrophoresis and peptide mapping complete with the latest refinements and updates of the procedures In addition it describes major new techniques which have come to the fore since the previous edition Thus there are chapters on capillary gel electrophoresis sequence analysis of gel resolved proteins fluorophore labelled saccharide electrophoresis and analysis of protein protein interactions by gel electrophoresis One thing has not changed The emphasis is still on describing the best methods in step by step detail with copious advice to ensure that each method works first time in the reader s hands The first two editions of *Gel Electrophoresis of Proteins A Practical Approach* each gained a strong reputation as easy to follow laboratory manuals written by experienced researchers for researchers The methods were

presented in a clear accessible format and had been fully tested to ensure success in the lab This new edition will strengthen the reputation of the book still further It is a must have for all those who currently use gel electrophoresis or who plan to do so

Methods of Protein and Nucleic Acid Research L.A. Osterman,1984-02-01 A consideration of the different types of immunoelectrophoresis is the natural conclusion to the methods of electrophoretic fractionation described in the preceding book for proteins and nucleic acids Immunoprecipitation is the essential component process of immunoelectrophoresis and is in itself a highly specific method of purifying proteins It can also be used for their detection after conventional electrophoresis or isoelectrofocusing It is therefore worthwhile considering the mechanism and specific features of immunoprecipitation before considering immunoelectrophoresis itself Some of these features in particular the ambiguity of the immune response and the polymorphism of immune reactions cannot be understood without a brief but not superficial knowledge of the mechanism of generating immunity the structure and function of the immunoglobulins and the nature of antigen antibody interactions A knowledge of these topics is necessary for an understanding of the radioimmune methods dealt with in the second Part of the book In the majority of cases biochemists and molecular biologists are inadequately acquainted with contemporary immunochemistry which is currently undergoing rapid development All this justifies the inclusion of a detailed introduction to immunochemistry as the first chapter Chapter 2 is devoted to a description of the use of antisera in the immunological assay of components separated by conventional electrophoresis and IEF The remaining three Chapters analyze the different forms of immuno electrophoresis usually carried out in agarose gels
