Developing Students' Statistical Reasoning Joan Garfield, Dani Ben-Zvi, 2008-09-08 Increased attention is being paid to the need for statistically educated citizens statistics is now included in the K 12 mathematics curriculum increasing numbers of students are taking courses in high school and introductory statistics courses are required in college However increasing the amount of instruction is not sufficient to prepare statistically literate citizens A major change is needed in how statistics is taught To bring about this change three dimensions of teacher knowledge need to be addressed their knowledge of statistical content their pedagogical knowledge and their statistical pedagogical knowledge i e their specific knowledge about how to teach statistics This book is written for mathematics and statistics educators and researchers It summarizes the research and highlights the important concepts for teachers to emphasize and shows the interrelationships among concepts It makes specific suggestions regarding how to build classroom activities integrate technological tools and assess students learning This is a unique book While providing a wealth of examples through lessons and data sets it is also the best attempt by members of our profession to integrate suggestions from research findings with statistics concepts and pedagogy The book's message about the importance of listening to research is loud and clear as is its message about alternative ways of teaching statistics This book will impact instructors

giving them pause to consider Is what I m doing now really the best thing for my students What could I do better J Michael Shaughnessy Professor Dept of Mathematical Sciences Portland State University USA This is a much needed text for linking research and practice in teaching statistics The authors have provided a comprehensive overview of the current state of the art in statistics education research The insights they have gleaned from the literature should be tremendously helpful for those involved in teaching and researching introductory courses Randall E Groth Assistant Professor of Mathematics Education Salisbury University USA

Statistical Reasoning in Medicine Lemuel A. Moyé, 2007-06-13 Lowers the Learning Curve for Physicians and Researchers The successful Statistical Reasoning in Medicine The Intuitive P value Primer with its novel emphasis on patient and community protection illustrated the correct use of statistics in health care research for healthcare workers Through clear explanations and examples this book provided the non mathematician with a foundation for understanding the underlying statistical reasoning process in clinical research the core principles of research design and the correct use of statistical inference and p values The P Value Primer 2nd Edition levels the learning curve of statistics for health care researchers by further de emphasizing mathematical and computational devices bringing the principles of statistical reasoning closer to the uninitiated Adding to the updated discussions of research design hypothesis testing regression analysis and Bayes procedures are new discussions of absolute and relative risk as well as a lucid description of the number needed to treat NNT The multiple analysis issue is clearly defined and a new description of the correct use and interpretation of combined endpoints in health care research is offered in an easily digestible format The P value Primer 2nd Edition demolishes other obstacles that have impeded a clear understanding of the application of statistics in medicine The intertwined roles of epidemiology and biostatistics are depicted In addition to a description of the non technical history of statistics a new discussion describes the active cultural forces that have historically argued against the use of probability and statistics placing the current applications and controversies involving p values in context New illustrations of the difficulties physicians and health care providers face in research are offered and the differences between research skills and statistical skills are distinguished New discussion describing the process of scientific reasoning p values and the law is included All of this nonstandard content so essential for a well rounded perspective on the modern use of statistics in medicine makes this volume unique among introductory statistics books New figures conversation and illustrations fortify each chapter In addition three new appendices have been added on the normal distribution sample size computations and new requirements for the use of statistics in the courtroom

Statistics Education of Elementary Teachers Tracey L. Gorham Blanco, 2016 This study was conducted to investigate the statistical reasoning of pre service elementary teachers By implementing the Statistical Reasoning Assessment Garfield 2003 with a sample of 134 pre service elementary the researcher examined how these participants reason about data and probability and categorized their misconceptions The pre service elementary teachers were assessed at the end of their mathematics methods course and

would soon be entering the teaching field The results provide teacher education programs with a snapshot of the statistics knowledge of the pre service teachers they service The results indicate that the pre service teachers have moderately correct reasoning skills $M = 0.49$ $SD = 0.1$ that include the highest scores for understanding the difference between correlation and causation understanding the importance of large samples and being able to correctly interpret probabilities The areas in need of greatest improvement include understanding sampling variability selecting an appropriate average and being able to correctly compute probabilities Few differences were found across the demographic variables of gender student status degree and previous statistical experience However post baccalaureate and Master s degree seeking students did have higher statistical understandings than undergraduate students in general while traditional students and undergraduates had more misconceptions than their respective non traditional and post baccalaureate Master s degree seeking counterparts These results suggest that the statistics education of elementary teachers during teacher preparation should include more opportunities for pre service teachers to work with numerical data in order to explore variability and averages and pre service teachers need opportunities to make group comparisons to improve their skills and lessen their misconceptions Pre service elementary teachers could also benefit from experiences with basic concepts of probability
