Elements Of Statistical Learning Data Mining Inference And Prediction:

The Elements of Statistical Learning Trevor Hastie, Robert Tibshirani, Jerome H. Friedman, 2009 *The Elements of Statistical Learning* Trevor Hastie, Robert Tibshirani, Jerome Friedman, 2013-11-11 During the past decade there has been an explosion in computation and information technology. With it have come vast amounts of data in a variety of fields such as medicine, biology, finance, and marketing. The challenge of understanding these data has led to the development of new tools in the field of statistics and spawned new areas such as data mining, machine learning, and bioinformatics. Many of these tools have common underpinnings but are often expressed with different terminology. This book describes the important ideas in these areas in a common conceptual framework. While the approach is statistical, the emphasis is on concepts rather than mathematics. Many examples are given with a liberal use of color graphics. It is a valuable resource for statisticians and anyone interested in data mining in science or industry. The book's coverage is broad from supervised learning (prediction) to unsupervised learning. The many topics include neural networks, support vector machines, classification trees, and boosting (the first comprehensive treatment of this topic in any book). This major new edition features many topics not covered in the original, including graphical models, random forests, ensemble methods, least-angle regression, path algorithms for the lasso, non-negative matrix factorization, and spectral clustering. There is also a chapter on methods for wide data: p bigger than n , including multiple testing and false discovery rates.

Digital Soil Mapping with Limited Data Alfred E. Hartemink,Alex B. McBratney,Maria de Lourdes Mendonça-Santos,2008-07-11 Significant technological advances have been few and far between in the past approximately one hundred years of soil survey activities Perhaps one of the most innovative techniques in the history of soil survey was the introduction of aerial photographs as base maps for land mapping which replaced the conventional base map laboriously prepared by planimeter and alidade Such a relatively simple idea by today's standards revolutionized soil surveys by vastly increasing the accuracy and efficiency Yet even this innovative approach did not gain universal acceptance immediately and was hampered by a lack of aerial coverage of the world funds to cover the costs and in some cases a reluctance by some soil mappers and cartographers to change Digital Soil Mapping DSM which is already being used and tested by groups of dedicated and innovative pedologists is perhaps the next great advancement in delivering soil survey information However like many new technologies it too has yet to gain universal acceptance and is hampered by ignorance on the part of some pedologists and other scientists DSM is a spatial soil information system created by numerical models that account for the spatial and temporal variations of soil properties based on soil formation and related environmental variables Lagacherie and McBratney 2007
