The Integration of European Financial Markets Noah Vardi, 2010-12-14 The last decade has seen the increasing integration of European financial markets due to a number of factors including the creation of a common regulatory framework the liberalisation of international capital movements financial deregulation advances in technology and the introduction of the Euro However the process of integration has proceeded largely in the absence of any comprehensive legal regulation and has rather been constructed on the basis of sectorial provisions dictated by the needs of cross border transactions This has meant that many legal barriers still remain as obstacles to complete integration This book considers the discipline of monetary obligations within the wider context of financial markets The book provides a comparative and transnational examination of the legal rules which form the basis of transactions on financial markets Analysing the integration of the markets from a legal point of view provides an opportunity to highlight the role of globalisation as the key element favouring the circulation of rules models and especially the development of new regulatory sources The book examines market transactions and the institutes at the root of these transactions including the type of legislative sources in force and the subjects acting as legislators The first part of the book concentrates on the micro discipline of money debts payments and financial instruments The second part goes on to analyse the macro context of integration of the markets looking at the persistence of legal barriers and options for their removal as well as the development of new legal sources as a consequence of the transfer of monetary and political sovereignty Finally the book draws links between the two parts and assesses the consequences of the changes at the macro level of regulation on the micro level of legal discipline of monetary obligations particularly focusing on the emergence and growing importance of soft law

Financial Market Infrastructure and Economic Integration George A Papaconstantinou, 2024-01-25 This book is the first comprehensive study of the interplay between the cutting-edge regulation of financial infrastructure and international economic integration. It tackles a series of important questions: How does the regulation of central counterparties interact with international economic law? Is the WTO able to deal with the regulatory diversity of each country's financial rulebook? Do FTAs foster deeper integration of financial infrastructure services? Can competition law effectively tackle monopolisation and anti-competitive conduct in financial infrastructure? The book discusses how the liberalisation of financial market infrastructure is achieved within the most prominent international economic integration settings: the WTO, Economic Integration Agreements, and EU competition law. It explores whether a more harmonious relationship between financial regulation and economic integration is feasible and how it can be achieved. The book demonstrates the existence of both structural barriers to trade and trade-facilitating tools that can impede and foster the further integration of financial market infrastructure. Measuring the depth of liberalisation of financial market infrastructure services in more than 120 FTAs as well as surveying recent case law of the WTO, the Court of Justice of the European Union, and the practice of the European Commission, the book shows how the economic integration of financial market infrastructure occurs. An essential read for those seeking to understand how the cutting-edge regulation of financial market infrastructure and transnational systems of economic integration interact with one another.

Stagnation Versus Growth in Europe Luigi Paganetto, 2016-05-17 This book explores the debate on the policies required to overcome the crises of 2008 and 2011, in which the focus on short-term measures has overshadowed the need to analyze the low growth rate in the European Union and especially the Eurozone as the basis for interventions that will counteract the tendency toward stagnation. Factors that lie at the root of the low growth are examined in depth, covering for example the impact of the demographic trend toward an aging population in Europe, consequences of inequality for growth, challenges posed by technological change, competition from emerging countries, and difficulties in improving European governance. In addition, potential actions to foster innovation and avoid long-term stagnation, such as new measures to open up markets, stimulate competition in services, and promote green growth, are discussed. The book comprises a selection of contributions presented at the XXVII Villa Mondragone International Economic Seminar, which brought together renowned economists and representatives of a broad range of countries and leading international institutions. It will appeal to all who are interested in the latest thinking on stagnation, growth, inequality.
