Cu Organocopper Compounds Helmut Bauer, Jürgen Faust, Rolf Froböse, Johannes Füssel, Ulrich Krüerke, Manfred Kunz, Herman M. Somer, 2013-06-29 The present volume finalizes the coverage of organocopper compounds A complete formula and ligand index for the Gmelin organocopper series will appear shortly as Organocopper Compounds 5 The volume describes mononuclear compounds with ligands bonded by two or more carbon atoms as well as all di to octanuclear and polymeric compounds Mononuclear compounds with ligands bonded by one carbon atom have already been described in Volumes 1 published in 1985 2 published in 1983 and 3 published in 1986 As structural elucidation in organocopper chemistry gained more attention only in the last few years the terms mononuclear dinuclear etc have been used as explained in Organocopper Compounds 1 1985 pp 3 4 all compounds are treated with their smallest formula unit unless a higher nuclearity has been proved As a consequence most of the species treated in volumes 1 to 3 are described there because of insufficient structural information although they are alleged not to be monomeric This way many of the better characterized compounds appear in the present volume which is reflected by the more than eighty X ray structure figures Generally nuclearity and structure are not only determined by the coordination properties of the ligands but also by steric requirements and may therefore widely differ for analogous compounds For abbreviations and dimensions used throughout this volume see p X Frankfurt am Main July 1987 Johannes Füssel Remarks on Abbreviations and Dimensions Most compounds and reagents in this volume are presented in tables

Ga Organogallium Compounds, 2013-06-29 The present volume describes all organogallium compounds i e compounds containing at least one

gallium carbon bond It covers the literature completely to the end of 1984 and includes many references to the literature up to the end of 1985 The organic chemistry of gallium is largely dominated by compounds of the types GaR_3 Chapter 1 GaR_3 Chapters 2 to 12 and $\text{M GaR}_n\text{X}_{4-n}$ M cation Chapter 13 where X_{n-3} stands for a non carbon atom or any organic or organometallic group bonded to gallium through a non carbon atom The arrangement of GaR_3 and $\text{M GaR}_n\text{X}_{4-n}$ compounds by $n-3$ the kind of Ga X bond is evident from the table of contents on pp XI to XIV The extensive use of pyrazolyl containing organogallium anions as polydentate donor ligands in transition metal compounds resulted in a particularly voluminous chapter on anions with Ga N bonds 13 6 The volume is concluded by a few low valence organogallium compounds Chapter 14 that I atom and an aromatic ligand in an TJe fashion exhibit bonding interaction between a gallium Due to a free coordination site at the Ga atom neutral compounds form many adducts with Lewis bases symbol D These adducts are described along with the parent substances either in a subsection of the respective chapter or in a common table at the end of the table

Mn Manganese Bärbel Sarbas, Wolfgang Töpper, 2013-06-29 The present volume is the first of a series describing Mn minerals There has been no attempt to provide a thorough bibliographically complete coverage of the literature Rather a selection of papers was undertaken to cover especially the various aspects of occurrence and genesis Papers that only mention an occurrence of a minerat species without additional data will not be taken into account except if they represent an unusual type of occurrence The volume starts with a brief outline of the chemical and geo cosmochemical characteristics of Mn its abundance and distribution in the cosmos and on earth and its distribution in minerals The main part describes the native metal its solid solutions with Fe or Al and silicides and carbide the sulfides and related compounds the halogenides and oxyhalogenides and the oxides of type MO The minerat descriptions comprise the following topics occurrence comprising data on paragenesis intergrowths inclusions and alteration chemistry comprising complete analysis formula diadochy and the relationship between composition and type of geological occurrence or composition and physical properties crystal form and structure optical and other physical properties and chemical and thermal behavior Frankfurt am Main Wolfgang Töpper April 1993 Table of Contents Page 1 Natural Occurrence Minerals *Index* Rainer Bohrer, Uwe Nohl, Paul Kämpf, Bernd Kalbskopf, Hans-Jürgen Richter-Ditten, 2013-03-09 The Gmelin Formula Index and the First and Second Supplement covered the volumes of the Eighth Edition of the Gmelin Handbook which appeared up to the end of 1987 This Third Supplement extends the Gmelin Formula Index and includes the compounds from the volumes until 1992 The publication of the Third Supplement enables to locate all compounds described in the Gmelin Handbook of Inorganic and Organometallic Chemistry since 1924 The basic structure of the Formula Index remains the same as the previous editions Computer methods were employed during the preparation and the publication of the Third Supplement Data acquisition sorting and data handling were performed using a suite of computer programs developed originally by B Roth now at Chemplex GmbH The SGML application for the final data processing for printing was developed in the computer department of the Gmelin Institute and

at Universit tsdruckerei H St rtz AG W rzburg Frankfurt am Main March 1994 U Nohl G Olbrich Instructions for Users of the Formula Index First CoLumn Empirical FormuLa The empirical formulae are arranged in alphabetical order of the element symbols and by increasing values of the subscripts Any indefinite subscripts are placed at the end of the respective sorting section Ions always appear after the neutral species positive ions preceding negative ones

Sn Organotin Compounds Herbert Schumann, Ingeborg Schumann, 2013-06-29 The significance of organometallic chemistry has constantly increased during the second half of this century Within this area of research the organotin chemistry reigns as one of the most important branches The decisive reason for this development has been the wide range of potential application of these compounds in industry technology and agriculture The present volume continues the series on Organotin Compounds which first appeared in 1975 and now comprises a collection of sixteen volumes The overall plan of the series has been given in the preface of Volume 1 This volume concludes the description of the mononuclear organotin compounds with tin oxygen bonds Treatment of organotin compounds with tin sulfur selenium and tellurium bonds appeared earlier in the Volumes 9 and 10 Volume 17 describes in detail the following compound types R₃Sn OR 3 R₃Sn OR 2 OR R₂Sn X OR R₃SnX OR 2 and R₃SnX₂ OR

Nuclear Science Abstracts, 1973 **At Astatine** Hans K.

Kugler, Cornelius Keller, 2013-03-09 Astatine is besides radon and francium the only natural radioelement which only has short Lived isotopes thereby excluding experiments with weighable amounts of the element This implies that all available data on physics and chemistry of this element are 12 16 based on experiments on the tracer scale with 10 to 10 g and this will also not change in future because no longer Lived isotopes as yet known are to be expected Due to the fact that the only isotope of At occurring in the natural decay series ²¹⁹At results from the 0 005% a branching of ²²³Fr which itself is

produced by the only 1 38% a branching of ^{227}Ac a member of the ^{235}U series there is no chance to recover substantial amounts of ^{219}At from natural sources for scientific research of At All studies therefore are being done with the isotopes ^{209}At to ^{211}At having half lives in the few hours region and being obtained by irradiation of bismuth with α particles via α, n reactions or by proton irradiation of heavy elements via spallation reactions The mostly used isotope is ^{211}At The fast separation of the obtained At isotopes is no very difficult procedure and is either being done by wet adsorption precipitation techniques or making use of its high volatility by distilling in air
