**The Economics of Marine Resources and Conservation Policy** James A. Crutchfield, Arnold Zellner, 2010-04-15 How can we manage a so called renewable natural resource such as a fishery when we don't know how renewable it really is James A Crutchfield and Arnold Zellner developed a dynamic and highly successful economic approach to this problem drawing on extensive data from the Pacific halibut industry Although the U S Department of the Interior published a report about their findings in 1962 it had very limited distribution and is now long out of print This book presents a complete reprint of Crutchfield and Zellner's pioneering study together with a new introduction by the authors and four new papers by other scholars These new studies cover the history of the Pacific halibut industry as well as the general and specific contributions of the original work such as price oriented conservation policy to the fields of resource economics and management The resulting volume integrates theory and practice in a clear well contextualized case study that will be important not just for environmental and resource economists but also for leaders of industries dependent on any natural resource

**The Economics and Management of World Fisheries** Trond Bjørndal, Gordon Munro, 2012-10-25 Over the past several decades there has been increasing interest in and concern about the economics of the world's capture fishery resources Massive amounts of resource rent are being lost because of inadequate management and major rebuilding of fishery resources is called for This book draws together the latest economic theory of the management of these resources at both the national and the international levels and highlights areas where further research is urgently required The emphasis is on world capture fisheries rather than fisheries of specific regions and examples are drawn upon from both developed and developing countries It combines economic theory and empirical testing with an examination and analysis of resource policy options with particular emphasis on fisheries management policies at the international level where some of the most difficult resource management problems are found The authors maintain that capture fishery resources are properly viewed as a part of society's portfolio of natural capital assets Consequently a central theme of the book is that managing such resources should be viewed as asset management through time Written by two leading authorities this accessible textbook has been specially developed to meet the needs of students taking courses on fisheries management as well as professionals working in this area for governments and international organisations

**Successful Fisheries Management** Stephen Cunningham, Tim Bostock, 2005 This book centres around seven case studies ranging from the Pacific halibut fishery to traditional community based management in India from the Australian Northern prawn fishery to artisanal fishing in Senegal and from co management initiatives in Shetland the management of hake fisheries in Namibia to the Mauritanian fish trade each of which demonstrates some facets of successful fisheries management The failure of fisheries management has been widely analysed its successes far less so Successful Fisheries

Management outlines ways to improve fisheries management by drawing on successful management experience to identify the fundamentals of good practice Given the multi faceted nature of success there is no unique recipe The book suggests however that for those involved in the development and promotion of more effective fisheries management the major challenge is not to do the same things better but to do them differently *Technical Report* ,1969 *Marine Resource Economics* ,1984 **Fisheries Economics, Volume I** Lee G. Anderson,2019-10-28 This title was first published in 2002 This important collection of international research on fisheries economics offers a comprehensive source of contemporary research on key topics in the field as well as presenting the history of how the economic theory of fisheries exploitation has developed Bringing into focus a wide range of inquiry this volume concentrates most particularly on the traditional economic problem of optimal resource allocation Individual papers examine fundamental issues including the lack of efficiency of open access and the specification of exactly what dynamic efficiency entails Fisheries Economics is an invaluable research reference collection for the libraries of academic and other professional economists as well as an indispensable resource for those studying across the fields of natural resources fisheries economics and particularly fisheries management Giannini Reporter ,2003 Defying Ocean's End Linda Glover,Sylvia Earle,2012-09-26 If humankind were given a mandate to do everything in our power to undermine the earth s functioning we could hardly do a better job than we have in the past thirty years on the world s oceans both by what we are putting into it millions of tons of trash and toxic materials and by what we are taking out of it millions of tons of wildlife Yet only recently have we begun to understand the scale of those impacts Defying Ocean s End is the result of an unprecedented effort among the world s largest environmental organizations scientists the business community media and international governments to address these marine issues In June 2003 in the culmination of a year long effort they met specifically to develop a comprehensive and achievable agenda to reverse the decline in health of the world s oceans As conservation organizations begin to expand their focus from land issues to include a major focus on preservation of the sea it is increasingly apparent that we have to approach marine conservation differently and at much larger scale than we have to date What s also clear is the magnitude and immediacy of the growing ocean concerns are such that no one organization can handle the job alone Defying Ocean s End is a bold step in bringing the resources needed to bear on this vast problem before it is too late It offers a broad strategy a practical plan with priorities and costs aimed at mobilizing the forces needed to bring about a sea change of favorable attitudes actions and outcomes for the oceans and for all of us **Case Studies in Fisheries Self-governance** Ralph Edwin Townsend,Ross Shotton,Hirotsugu Uchida,2008-01-01 This special issue focuses on the Scientific forum held at the beginning of the International Technical Conference on Animal Genetic Resources for Food and Agriculture which took place in Interlaken Switzerland in September 2007 **CITES as a Tool for Sustainable Development** Marie-Claire Cordonier Segger,David Andrew Wardell,Alexandra Harrington,2023-08-10 Saving endangered species presents a critical and increasingly pressing
