Huggett, 2004 *Fundamentals of Biogeography* presents an accessible engaging and comprehensive introduction to biogeography explaining the ecology geography history and conservation of animals and plants Starting with an outline of how species arise disperse diversify and become extinct the book examines how environmental factors climate substrate topography and disturbance influence animals and plants investigates how populations grow interact and survive how communities form and change and explores the connections between biogeography and conservation The second edition has been extensively revised and expanded throughout to cover new topics and revisit themes from the first edition in more depth Illustrated throughout with informative diagrams and attractive photos and including guides to further reading chapter summaries and an extensive glossary of key terms *Fundamentals of Biogeography* clearly explains key concepts in the history geography and ecology of life systems In doing so it tackles some of the most topical and controversial environmental and ethical concerns including species over exploitation the impacts of global warming habitat fragmentation biodiversity loss and ecosystem restoration *Fundamentals of Biogeography* Richard John Huggett, 1998 **Fundamentals of Biogeography** , Key Concepts in Geography Nicholas Clifford, Sarah Holloway, Stephen P Rice, Gill Valentine, 2008-12-12 This book clearly outlines key concepts that all geographers should readily be able to explain It does so in a highly accessible way It is likely to be a text that my students will return to throughout their degree Dr Karen Parkhill Bangor University The editors have done a fantastic job This second edition is really accessible to the student and provides the key literature in the key geographical terms of scale space time place and landscape Dr Elias Symeonakis Manchester Metropolitan University An excellent introductory text for accessible overviews of key concepts across human and physical geography Professor Patrick Devine Wright Exeter University Including ten new chapters on nature globalization development and risk and a new section on practicing geography this is a completely revised and updated edition of the best selling standard student resource *Key Concepts in Geography* explains the key terms space time place scale landscape that define the language of geography It is unique in the reference literature as it provides in one volume concepts from both human geography and physical geography Four introductory chapters on different intellectual traditions in geography situate and introduce the entries on the key concepts Each entry then comprises a short definition a summary of the principal arguments a substantive 5 000 word discussion the use of real life examples and annotated notes for further reading Written in an accessible way by established figures in the discipline the definitions provide thorough explanations of all the core concepts that undergraduates of geography must understand to complete their degree **Innovative Computational Intelligence: A Rough Guide to 134 Clever Algorithms** Bo Xing, Wen-Jing Gao, 2013-12-13 The first notable feature of this book is its innovation Computational intelligence CI a fast evolving area is currently attracting lots of researchers attention in dealing with many complex problems At present there are quite a lot

competing books existing in the market Nevertheless the present book is markedly different from the existing books in that it presents new paradigms of CI that have rarely mentioned before as opposed to the traditional CI techniques or methodologies employed in other books During the past decade a number of new CI algorithms are proposed Unfortunately they spread in a number of unrelated publishing directions which may hamper the use of such published resources These provide us with motivation to analyze the existing research for categorizing and synthesizing it in a meaningful manner The mission of this book is really important since those algorithms are going to be a new revolution in computer science We hope it will stimulate the readers to make novel contributions or even start a new paradigm based on nature phenomena Although structured as a textbook the book s straightforward self contained style will also appeal to a wide audience of professionals researchers and independent learners We believe that the book will be instrumental in initiating an integrated approach to complex problems by allowing cross fertilization of design principles from different design philosophies The second feature of this book is its comprehensiveness Through an extensive literature research there are 134 innovative CI algorithms covered in this book

The Asian Infrastructure Investment Bank M. Wan, 2016-04-29 This book assesses the strategic significance of the Asian Infrastructure Investment Bank AIIB by examining the logic of international power and order historic trends in East Asian international relations the AIIB s design in comparison to rival financial institutions such as the World Bank and the Asian Development Bank recent tendencies in Chinese foreign policy and the Chinese system of political economy It focuses on how China constructs international arrangements at a critical juncture in history compared to other great powers especially the United States and Japan Viewed in isolation the AIIB does not represent a radical departure from the existing international order it is a hybrid institution built on China s integration into the West dominated international structure and conditioned by the global financial market But the AIIB does draw in part from a different institutional lineage a different historical root and a different national system of political economy In this context China s greater success will constitute a partial change to the existing international order whatever the Chinese intention

Indian Pandanaceae - an overview Altafhusain Nadaf, Rahul Zanan, 2013-02-17 Indian screw pine family Pandanaceae represents three genera in which genus Pandanus and Benstonea are distributed in two hotspots in India the Western Ghats and the Northeast Himalayan region For the first time Indian Pandanaceae has been assessed for its taxonomic status and phylogenetic relationship The extensive survey by the authors led to the discovery of three new Pandanus species two from the Western Ghats and one from the Northeast Himalaya The present taxonomic revision confirmed total number of Pandanus species to 14 that are distributed in the Southern India 9 species and Northeast Himalayan region 5 species Genus Benstonea is represented by two species one from Southern India and another species common to both regions A detailed species identification key is given along with conservation status of each species following IUCN Red List Categories and Criteria 2001 The study revealed that out of 16 Pandanus and Benstonea species six species are under threatened categories In recent years a chloroplast DNA based molecular phylogenetic approach has been followed to understand the evolutionary relationship among the plant species The interrelationship among the 14 Pandanus species at infrageneric level has been worked out using this approach which has led to the rearrangement of some species to the subgenera proposed by Stone 1974 Moreover the close relationship between Pandanus and Benstonea has been confirmed and the interrelationship of Indian Pandanus genus in global context is given This book also describes the economic importance of each Pandanus species

Encyclopedia of Biodiversity , 2013-02-05 The 7 volume Encyclopedia of Biodiversity Second Edition maintains the reputation of the highly regarded original presenting the most current

information available in this globally crucial area of research and study. It brings together the dimensions of biodiversity and examines both the services it provides and the measures to protect it. Major themes of the work include the evolution of biodiversity systems for classifying and defining biodiversity, ecological patterns and theories of biodiversity, and an assessment of contemporary patterns and trends in biodiversity. The science of biodiversity has become the science of our future. It is an interdisciplinary field spanning areas of both physical and life sciences. Our awareness of the loss of biodiversity has brought a long overdue appreciation of the magnitude of this loss and a determination to develop the tools to protect our future. Second edition includes over 100 new articles and 226 updated articles covering this multidisciplinary field from evolution to habits to economics in 7 volumes. The editors of this edition are all well respected, instantly recognizable academics operating at the top of their respective fields in biodiversity research; readers can be assured that they are reading material that has been meticulously checked and reviewed by experts. Approximately 1 800 figures and 350 tables complement the text and more than 3 000 glossary entries explain key terms. **Theistic Evolution** J. P.

Moreland, Stephen C. Meyer, Christopher Shaw, Ann K. Gauger, Wayne Grudem, 2020-06-20 Winner of the ECPA Book of the Year Award for Bible Reference Works. Many prominent Christians insist that the church must yield to contemporary evolutionary theory and therefore modify traditional biblical ideas about the creation of life. They argue that God used, albeit in an undetectable way, evolutionary mechanisms to produce all forms of life. Featuring two dozen highly credentialed scientists, philosophers, and theologians from Europe and North America, this volume contests this proposal, documenting evidential, logical, and theological problems with theistic evolution, making it the most comprehensive critique of theistic evolution yet produced. Explains why theistic evolution is not congruent with a biblical worldview. Features nineteen essays written by well-known experts in their fields. Designed to be used as a textbook for courses on religion and evolution. Accessible for those without expertise in the subject. Faunal and Floral Migration and Evolution in SE Asia-Australasia Ian Metcalfe, Jeremy M.B. Smith, Mike Morwood, Iain Davidson, 2001-06-01 This multidisciplinary book focuses on the relationships and interactions between palaeobiogeography, biogeography, dispersal, vicariance, migrations, and evolution of organisms in the SE Asia Australasian region. The book investigates biogeographic links between SE Asia and Australasia, which go back more than 500 million years. It also focuses on the links between geological evolution and biological migrations and evolution in the region. It was in the SE Asian region that Alfred Russell Wallace established his biogeographic line, now known as Wallace's Line, which was the beginning of biogeography. Wallace also independently developed his theory of evolution based on his work in this area. The book brings together for the first time geologists, palaeontologists, zoologists, botanists, entomologists, evolutionary biologists, and archaeologists in the one volume to relate the region's geological past to its present biological peculiarities. The book is organized into six sections. Section 1, Paleobiogeographic Background, provides overviews of the geological and tectonic evolution of SE Asia, Australasia, and changing patterns of land and sea for the last

540 million years Section 2 Palaeozoic and Mesozoic Geology and Biogeography discusses Palaeozoic and Mesozoic biogeography of conodonts brachiopods plants dinosaurs and radiolarians and the recognition of ancient biogeographic boundaries or Wallace Lines in the region Section 3 Wallace's Line focuses on the biogeographic boundary established by Wallace including the history of its establishment its significance to biogeography in general and its applicability in the context of modern biogeography Section 4 Plant biogeography and evolution includes discussion on primitive angiosperms the diaspora of the southern rushes and environmental climatic and evolutionary implications of plants and palynomorphs in the region The biogeography and migration of insects butterflies birds rodents and other non primate mammals is discussed in section 5 Non Primates The final section 6 Primates focuses on the biogeographic radiation migration and evolution of primates and includes papers on the occurrence and migration of early hominids and the requirements for human colonization of Australia

Marine Biodiversity, Climatic Variability and Global Change Grégory Beaugrand,2014-11-28 Biodiversity loss in terrestrial environments associated with human activities has been appreciated as a major issue for some years now What is less well documented is the effect of such activities including climate change on marine biodiversity This pioneering book is the first to address this important but neglected topic which is likely to be the key challenge for marine scientists in the near future Using a multidisciplinary and a holistic approach the book reveals how climatic variability controls biodiversity at time scales ranging from synoptic meteorological events to millions of years and at spatial scales ranging from local sites to the whole ocean It shows how global change including anthropogenic climate change ocean acidification and more direct human influences such as exploitation pollution and eutrophication may alter biodiversity ecosystem functioning and regulating and provisioning services The author proposes a theory termed the macroecological theory on the arrangement of life which explains how biodiversity is organized and how it responds to climatic variability and anthropogenic climate change The book concludes with recommendations for further research and theoretical development to identify oceanic areas in need of observation and gaps in current scientific knowledge Many references and comparisons with the terrestrial realm are included in all chapters to better understand the universality of the relationships between biodiversity climate and the environment The book will serve as a textbook for all students and researchers of marine science and environmental change but will also be accessible to the more general reader Chapter 27: Spatial Distribution of Species and Ecosystems
