Fundamentals of  
sonar for finding  
submarines or fish

Fig. 1—Sonar detects a submarine. The transmitted sonic energy is sent out as a series of pulses. The submarine target reflects the sound that strikes it and a portion of this reflection is picked up, amplified and heard as an echo by the sonar operator.

*Fundamentals of Sonar* Joseph Warren Horton, 1959      *Fundamentals of Sonar* J. W. Horton, 1965      **Fundamentals of Sonar** Joseph Warren Horton, 1959      *Introduction to Sonar* United States. Bureau of Naval Personnel, 1963

Fundamentals of sonar systems are presented in this book prepared for both regular navy and naval reserve personnel who are seeking advancement in rating. An introductory description is first made of submarines and antisubmarine units. Determination of underwater targets is analyzed from the background of true and relative bearings, true and relative motion, and computation of target angles. Then applications of both active and passive sonars are explained in connection with bathythermographs, fathometers, tape recorders, fire control techniques, internal and external communications systems, maintenance actions, test methods, and equipment, and safety precautions. Basic principles of sound and temperature effects on wave propagation are also discussed. Illustrations for explanation, use information on training films, and the sonar technician rating structure are also provided.

*Principles of Sonar Performance Modelling* Michael Ainslie, 2010-09-14

Sonar performance modelling (SPM) is concerned with the prediction of quantitative measures of sonar performance such as probability of detection. It is a multidisciplinary subject requiring knowledge and expertise in the disparate fields of underwater acoustics, acoustical oceanography, sonar signal processing, and statistical detection theory. No books have been published on this subject, however, since the 3rd edition of Urick's classic work 25 years ago, and so Dr Ainslie's book will fill a much needed gap in the market. Currently, up-to-date information can only be found in different forms and often with conflicting information in various journals, conference, and textbook publications. Dr Michael Ainslie is eminently qualified to write this unique book. He has worked on sonar performance modeling problems since 1983. He has written many peer-reviewed research articles and conference papers related to sonar performance modeling, making contributions in the fields of sound propagation and detection theory.

**An Introduction to Sonar Systems Engineering** Lawrence J. Ziomek, 2022-08-23

An Introduction to Sonar Systems Engineering, Second Edition. Important topics that are fundamental to the understanding of modern day sonar systems engineering are featured. Linear planar and volume array theory, including near field and far field beam patterns, beam steering, and array focusing, are covered. Real world arrays such as the twin line planar array and a linear array of triplets, which are solutions to the port starboard left right ambiguity problem associated with linear towed arrays, are examined in detail. Detailed explanations of the fundamentals of side looking side scan and synthetic aperture sonars are presented. Bistatic scattering with moving platforms is explored with derivations of exact solutions for the time delay, time compression, time expansion factor, and Doppler shift at a receiver for both the scattered and direct acoustic paths. Time domain and frequency domain descriptions and the design of CW, LFM, and Doppler invariant HFM pulses are explained. Target detection in the presence of reverberation and noise is examined. Time domain and frequency domain descriptions of MFSK, MQAM, and OFDM underwater acoustic communication signals are also discussed. Although the book is

mathematically rigorous it is written in a tutorial style Many useful practical design and analysis equations for both passive and active sonar systems are derived from first principles No major steps in the derivation of important results are skipped all assumptions and approximations are clearly stated Particular attention is paid to the correct units for functions and parameters Many figures tables examples and practical homework problems at the end of each chapter are included to aid in the understanding of the material covered New to the Second Edition Chapter 15 Synthetic Aperture Sonar Chapter 13 Section 13.3 The Rectangular Envelope HFM Pulse Chapter 10 Section 10.7 Moving Platforms was rewritten which allowed for the elimination of Appendix 10C from the first edition New explanations discussions were added to Subsections 1.2.1 and 1.3.1 in Chapter 1 Appendix 1A was rewritten and the new Table 1A.1 was added to Chapter 1 A solutions manual is available for adopting professors

**Underwater Acoustic Data Processing** Y. T. Chan, 2012-12-06 This book contains the papers that were accepted for presentation at the 1988 NATO Advanced Study Institute on Underwater Acoustic Data Processing held at the Royal Military College of Canada from 18 to 29 July 1988 Approximately 110 participants from various NATO countries were in attendance during this two week period Their research interests range from underwater acoustics to signal processing and computer science some are renowned scientists and some are recent Ph.D. graduates The purpose of the ASI was to provide an authoritative summing up of the various research activities related to sonar technology The exposition on each subject began with one or two tutorials prepared by invited lecturers followed by research papers which provided indications of the state of development in that specific area I have broadly classified the papers into three sections under the titles of I Propagation and Noise II Signal Processing and III Post Processing The reader will find in Section I papers on low frequency acoustic sources and effects of the medium on underwater acoustic propagation Problems such as coherence loss due to boundary interaction wavefront distortion and multipath transmission were addressed Besides the medium corrupting noise sources also have a strong influence on the performance of a sonar system and several researchers described methods of modeling these sources
