Fundamentos de neurología Manuel Fernández Pardal,Federico Michelini,1992 **Fundamentos de neurología clínica** Leon A. Weisberg,Richard L. Strub,Carlos A. García,Ann C. Strub,1986 **Edificios vivenciales y terapéuticos para adultos mayores** Berta Brusilovsky,2021-06-22 La arquitectura es una pr ctica social y cultural que debe responder con amplios criterios funcionales y est ticos es decir con aquellos que se adapten mejor a los procesos neurol gicos comportamentales y f sicos de todas las personas No deber a ser una escultura para admirar desde afuera y vivir con dificultades desde adentro En esta l nea de pensamiento y acci n se re n el envejecimiento como funcionamiento humano y la arquitectura con una propuesta para el desarrollo de recomendaciones t cnicas funcionales y est ticas para dise ar entornos y edificios vivenciales y terap uticos que se convertir an en un conjunto de valores que culminar an en la justicia Esta investigaci n te rica y aplicada se basa en los estudios y procedimientos que se han llevado a cabo en proyectos de accesibilidad para la diversidad de modos cognitivos de las personas en general y el an lisis en particular de la espacialidad de centros de d a residencias para adultos mayores y proyectos realizados sobre la base del modelo para dise ar espacios comprensibles Su intenci n es que sirva de base para el desarrollo de directrices t cnicas actualmente escasas y dispersas relacionadas con la atenci n protecci n y mejora de la calidad de vida de las personas en especial en zonas urbanas que no facilitan un desenvolvimiento adaptado a las caracter sticas de salud f sicas y psicol gicas tan diversas de la poblaci n mayor Se requiere que todos los profesionales incluidos los del dise o y la construcci n piensen en la importancia de dedicar un tiempo a compartir experiencias en materia de espacios id neos para la vejez Los equipamientos que se dise an son muchas veces entendidos como lugares hospitalarios y asistenciales no para la recreaci n y la activaci n neurol gica o como conjuntos

hoteleros donde prevalece el concepto estético de sus fachadas y sus materiales en lugar de buscar una tica del diseño o que favorezca a las personas en su funcionamiento integral. Se limitan de esta manera experiencias vitales vivenciales que son imprescindibles tanto en la infancia como en la madurez pero que en la vejez si no hubiera este tipo de aportes la vida se reduciría esperando que de la mano se dirijan sus días y sus noches hasta que injustamente terminen muriendo de soledad o de pena. Ese es el gran reto que se asume con un enfoque integral y sobre todo profundo porque mira hacia el interior de las funciones neurológicas y hacia el exterior de la conducta las complejas relaciones del sistema nervioso humano (SNH) en su experiencia espacial. Organization of Language and Cognitive Processes Alfredo Ardila, Feggy Ostrosky-Solis, 2012-12-06 Neuropsychology has presented a particularly formidable array of developments during recent years. The number of methods, theoretical approaches and publications has been steadily increasing permitting a step by step approach to a deeper understanding of the tremendously complex relationships existing between brain and behavior. This volume was planned as a collection of papers that in one way or another present new research and clinical perspectives or interpretations about brain behavior relationships. Some chapters present new research in specific topics others summarize the evidence for a particular theoretical position and others simply review the area and suggest new perspectives of research. Consistent with the spirit in which the book was planned the authors present and propose new avenues for developing neuropsychology and understanding the organization of cognitive activity. Part I is devoted to basic theoretical and technical approaches in studying brain organization of cognitive processes. Hanlon and Brown Microgenesis: Historical Review and Current Studies present an overview of some clinical and experimental work from the standpoint of microgenetic theory. Microgenesis is considered to be the structural development of a cognition through qualitatively different stages. The authors discuss the growing dissatisfaction with both the old center and pathway theories and the newer modular or componential accounts. They also explore how microgenesis can be extended to the interpretation of symptoms of brain damage in developing a structural model of hierarchic levels through which the process of cognitive function unfolds.
