Globalization Dimensions & Impacts Evren Denктаş, Bengü Doğangün Yasa, Gülten Dursun, Sema Yılmaz Genç, Hilal Yıldız, Keremet Shaiymbetova, Figen Büyükkakın, Zişan Kılıçkan, İsmail Şiriner, Keremet Shayymbetova, Murat Aydın, Mustafa Doğan, Nilay Etiler, Kuvvet Lordoğlu, Ayhan Orhan, 2015-04-30

The concept of globalisation is essentially about the increasing economic political cultural and technological intergradation with increasing speed depth and breadth Globalisation has become a buzz word in many academic debates especially amongst those who use the concept to describe the spread of global capitalism market the declining role of the state and globalisation of civil society Harvey 2005 Harmon 2009 Chomsky 1999 Saad Filho and Johnston 2004 In short Harvey defines neoliberalism as a theory of political economic practices that proposes that human well being can best be advanced by liberating individual entrepreneurial freedoms and skills within an institutional framework characterized by strong private property rights free markets and free trade The role of the state is to create and preserve an institutional framework appropriate to such practices The state has to guarantee for example the quality and integrity of money It must also set up those military defence police and legal structures and functions required to secure private property rights and to guarantee by force if need be the proper functioning of markets Furthermore if markets do not exist in areas such as land water education health care social security or environmental pollution then they must be created by state action if necessary Harvey 2005 2 This has become an all encompassing term for differing economic and political projects What essentially new liberalism has in common is that the state should be minimal as the competition of the market will bring economic efficiency and choice The crisis of capitalism in the late 1970s and 1980s has opened the gap for neoliberal ideas to have resonance as a solution to global capitalism Despite their political historical geographical and economic differences nearly every country in the world especially in the global south has implemented neoliberal policies in some form The policies have become an increasingly real alternative to overcome the predicament of the world economy With the demise of Soviet ideology the advocates of the free market liberalism in the world particularly in the USA saw this as an opportunity to reassert their power globally Hence the globalisation of the world economy is claimed to serve the great majority of the world's people and it will liberate the poor countries because they will have free domestic and international trade and more open financial markets Wade 2004 38 At the core of globalisation lies the belief that a country must promote the private sector as the primary engine of its economic growth by shrinking the size of its state bureaucracy increasing exports privatising state owned industries and utilities and deregulating capital markets Friedman 1999 The process that led to claim that the state that artefact of the eighteenth and nineteenth centuries has begun to crumble Ohmea 1995 7 With the international system the borders are no longer necessary and the international commerce would become free from the cumbersome constraints of state interference However the reality after nearly three decades of globalisation have not been drastically different from much of the world the international system has yet to

witness universalization of democracy or wealth In fact one of the consequences of globalisation appears to have been the poor growth and polarisation of wealth Morady they have been responsible to regulate and implement policies to suit the market Mustafa Do an also looks at the local development issue yet assessing the role of ecomuseums in Turkey Whilst the principles of sustainable local development are now widely implemented across the world at the same time are protecting cultural and natural assets The article will provide an overview on ecomuseums that they are focused on a specific place or territory and on the relationship between the population and their environment culture and local history He will argue that ecomuseums have been utilized as a major means of promoting sustainable development in many rural areas of the world by conserving natural historical and sociocultural resources of a locality whilst recognising a place's potential to provide low level tourism and economic social opportunities The empirical work of the paper is based on ecomuseum and social economic development in Boatepe village in the province of Kars in Turkey One of the consequences of globalisation is migration and gender as it is becoming a major socioeconomic study The feminisation of migration as defining the number of women at international labour migration has been increasing in recent years Nilay Etiler and Kuvvet Lordolu will assess the health problems of recent female migrants They will argue that women migrants are mostly employed in jobs that are appropriate to their gender roles such as housework or childcare Whilst the health of migrants as a whole deteriorate because of poor living and working conditions the female workers suffer more especially in the area of mental health Ayhan Orhan focuses on the property rights of natural Resources in a globalised world He examines the rapid change of natural resource distribution in since the 1990s which has added a new dimension to the concept of property rights Hence he argues that natural resources and property rights could not be treated independently from Multi National Companies or the states As a last contributor of this volume of globalization Farhang Morady argues that Iran's strategy to balance between the US on the one hand and China Russia and India on the other was a failure According his determinations the end of the Cold War and the emergence of new independent republics in Central Asia offered Iran the opportunity to become a vital actor in the geopolitics of the region Iran was seen as a possible corridor between Central Asia the Persian Gulf and the Indian Ocean Region IOR Struggling against US policy of strategic isolation Iran made concerted efforts to break out of it by cultivating closer ties with non Western powers It used diplomacy energy and trade for the purpose of balancing its foreign relations His paper will assess the strategic ambitions of Iran as a regional power and the degree of its success in combating Western imposed sanctions and the US military threat over the disputed nuclear programme This balancing against the West was the dominant approach during the Conservative presidency of Mahmoud Ahmadinejad In the paper he figures out that it reflects a changed approach to serving Iran's interest by working with and not against the West Due to nuclear détente growing strategic convergence with the US in Iraq and Afghanistan and the American shift in emphasis to the Pacific Iran has an invaluable opportunity to re emerge as a crucial member in the Indian Ocean Region We hope this addition of globalisation

will provide some ideas to inspire academics and students not only to what the world is facing but some solutions as well

The Geography of Money Benjamin J. Cohen, 2018-10-18 The traditional assumption holds that the territory of money coincides precisely with the political frontiers of each nation state France has the franc the United Kingdom has the pound the United States has the dollar But the disparity between that simple mental landscape and the actual organization of currency spaces has grown in recent years as territorial boundaries of individual states limit currency circulation less and less Many currencies are used outside their home country for transactions either between nations or within foreign states In this book Benjamin J Cohen asks what this new geography of money reveals about financial and political power Cohen shows how recent changes in the geography of money challenge state sovereignty He examines the role of money and the scope of cross border currency competition in today's world Drawing on new work in geography and network theory to explain the new spatial organization of monetary relations Cohen suggests that international relations political as well as economic are being dramatically reshaped by the increasing interpenetration of national monetary spaces This process he explains generates tensions and insecurities as well as opportunities for cooperation

Economic and Political Democracy in Complex Times Andrés Solimano, 2022-07-29 The concept of economic democracy is traditionally identified with workplace democracy and

participation at the enterprise level This is a very important dimension but the concept of new economic democracy also recognizes that in a world of increasing complexity the principles of democratic deliberation and social participation have to be applied to other areas as well This book takes a fresh look at economic democracy from various perspectives It provides rich historical narratives of episodes of social participation in the economy and society more broadly from the 19th to the 21st century It dissects the various analytical underpinnings informing the theory of economic democracy connecting it with collective choice social contract theory Marxian analysis and libertarian critiques The book identifies new areas of application of the principles of democratic deliberation and oversight such as the adoption of austerity policies the signing of free trade agreements the conduct of central bank policies international investment treaties and natural resource management It takes a guided tour through the evolution of economic social and cultural rights and their impact on the design and implementation of social policy and the welfare developmental state The book expands the notion of economic democracy from factory level to the macro economy and then to global economic governance It also discusses the critical links between political democracy and economic democracy and the need for a more democratic and socially equitable economy in the 21st century This volume will find an audience among economists political scientists social activists philosophers and sociologists

The Ascendancy of Finance Joseph Vogl, 2017-06-15 The global financial crisis of 2008 ushered in a system of informal decision making in the grey zone between economics and politics Legitimized by a rhetoric of emergency ad hoc bodies have usurped democratically elected governments In line with the neoliberal credo the recent crisis has been used to realize the politically impossible and to re align executive power with the interests of the finance industry In this important book Joseph Vogl offers a much longer perspective on these developments showing how the dynamics of modern finance capitalism have always rested on a complex and constantly evolving relationship between private creditors and the state Combining historical and theoretical analysis Vogl argues that over the last three centuries finance has become a fourth estate marked by the systematic interconnection of treasury and finance of political and private economic interests Against this historical background Vogl explores the latest phase in the financialization of government namely the dramatic transfer of power from states to markets in the latter half of the 20th century From the liberalization of credit and capital markets to the privatization of social security he shows how policy has actively enabled a restructuring of the economy around the financial sector Political systems are imprisoned by the regime of finance while the corporate model suffuses society enclosing populations in the production of financial capital The Ascendancy of Finance provides valuable and unsettling insight into the genesis of modern power and where it truly resides
